Brussels survey points to wide drug price differences in Europe

BY PAUL CHESTERMANT IN BRUSSELS

ANTIBIOTICS in West Germany cost on average 220 per cent more than they do in Italy. Drugs for the respiratory system in Britain cost around 120 per cent more than they do in France.

Consumers in the Netherlands and Italy are told that if they take one brand of tranquilliser they may feel dizzy, but consumers of the drug in other parts of the European Community are not given any such warning even though they use the same drug.

Such conclusions have emerged from a survey of the pharmaceuticals market in all EEC countries except Denmark, Greece and Luxembourg, undertaken by the European Bureau of Consumer Unions for the European Commission and published yesterday.

The results of the survey are generally seen as reinforcing analyses already made by the Commission itself and by private

sector consultancies. They tend to strengthen moves already underway in Brussels to bring a greater sense of order to a fragmented market.

Measures for the pharmaceutical industry are planned in the context of the drive to create a Europe without frontiers by 1992. Stress is being laid on setting common criteria for pricing policy and social security compensation. Fresh moves are being made to obtain mutual recognition of drug authorisations.

But officials emphasised yesterday that there is no political chance of organising the common pricing of pharmaceuticals or common social security provisions partially to pay for them.

Distinct national policies of control on the industry account for at least some of the price disparities. The Consumer Unions survey found that overall France is the cheapest

country in the EEC for pharmaceuticals. Going up the scale of expense, Belgium and Italy are the next lowest price markets, while the highest prices tend to be in Ireland, the Netherlands, the UK and West Germany.

But the averages hide huge distortions on individual products and groups of products. Taking a group of psychotropics, for example, the Consumer Unions found that in the UK, the prices were 82 per cent more than in France, while in the Netherlands they were 193 per cent more and in West Germany 281 per cent more.

The unions note that these price differences can be explained. But they add, "it is clearly more difficult to justify differences bearing directly on the medico-pharmaceutical aspects of a drug." Packaging and instructions for use differ from one country to another.

Chirac attacks Wellington on N-tests

By Our Foreign Staff

M. JACQUES CHIRAC, leader of France's neo-Gaullist RPR party, yesterday launched a strong attack on New Zealand for opposing his country's nuclear tests in the South Pacific.

He said New Zealand should be an ally of France but had "long associated itself with operations which went directly against French interests."

"The political, logistical, material, certainly financial support given by the New Zealanders to every action that is taken against the nuclear tests in the Pacific is incomprehensible and inadmissible on the part of a friendly state," the French opposition leader said in Noumea where he is campaigning for Sunday's local elections.

This is the first stage of Paris's plans for a referendum on independence by the end of 1987.

"This is particularly so because all the experts recognise that there is no sort of harm caused by these nuclear tests."

The former Prime Minister also said the latest official revelations on the sinking of the Greenpeace flagship Rainbow Warrior showed that a couple held in New Zealand were innocent of the attack and must be freed.

New Zealand authorities say, however, they are determined that the two French secret service agents being held in connection with the incident will go on trial in a New Zealand court.

SPD, E. Berlin in N-free zone talks

BY RUPERT CORNWELL IN BONN

IN A move which could raise further doubts about its foreign policy, West Germany's Social Democrat (SPD) opposition is about to embark on negotiations with the East German Communist Party (SED) over a future nuclear weapon free zone in central Europe.

The preparations for the discussions come only three months after the two parties agreed on a draft treaty which would ban the storing and production of chemical weapons in their countries.

The accord, unprecedented between a West European party committed to the Nato alliance and a Warsaw Pact Communist party, has now been followed by a formal proposal to that effect from Herr Erich Honecker, the East German leader, to Chancellor Helmut Kohl.

Czechoslovakia has subsequently informed Herr Kohl that it too would be ready to subscribe to such a pact, which might then be extended to embrace Poland to the east and the Benelux countries within Nato.

The SPD's initiatives have already led to jealous accusations from within the ruling centre-right coalition that it is conducting its own "parallel foreign policy" — charges that the East Germans wittingly or unwittingly, fomented by lavishing a regal reception upon Herr Willy Brandt, the Social Democrat chairman, during his recent visit there.

More seriously, many conservative observers here fear that the SPD may be allowing itself to be used as a tool by Moscow, in the run-up to the 1987 federal elections here in which

the opposition now seems likely to give Herr Kohl a much closer run than seemed likely only a few months ago.

The Soviet Union has consistently sought to loosen Bonn's anchorage in the Western alliance, and just a week ago Pravda proclaimed Moscow's readiness to guarantee a central European chemical weapon free zone, describing the issue as of "extraordinary importance."

The SPD team for the non-nuclear zone talks will be led by its veteran Ostpolitik negotiator Herr Egon Bahr, among the party's most trenchant critics of U.S. weapons policy and of the alleged failure of Washington to do more to promote détente.

The Social Democrats in fact have comparable negotiations in hand with other East

bloc nations. They are discussing confidence building measures with the Poles, environmental issues with the Czechoslovaks and means of lowering defence budgets with experts from the Soviet Union. All are described as "pilot projects" exploring a means of developing the Ostpolitik pioneered during the chancellorship of Herr Brandt between 1969 and 1974.

Herr Johannes Rau, the SPD's designate candidate to run for the Chancellorship in 1987, is generally reckoned to be a "conservative" on defence, sympathetic to the views of former Chancellor Helmut Schmidt, which now stand abandoned by the party. He may well be embarrassed by the latest activity, in which he has conspicuously played no part.

Honecker calls for more W. German trade

BY LESLIE COLLITT IN EAST BERLIN

EAST GERMANY'S leader Herr Erich Honecker told a prominent West German industrialist that his country wished to expand its trade with West Germany which is expected to exceed a record DM 16bn (\$4.1bn) this year.

In a meeting with Herr Berthold Beitz, chairman of the Krupp company's supervisory board, Herr Honecker said there were many "concrete starting points" for such an expansion. Herr Beitz noted that trade with East Germany was important for a considerable number of large West German companies as well as specialised small and medium-sized ones. He said Krupp was negotiating on a number of "interesting" projects with East Germany.

The meeting with Herr Beitz was Herr Honecker's third one in recent days with prominent West Germans. He has also held talks with Herr Otto Wolf von Amerongen, president of the West German Chamber of Industry and Trade.

The East German leader concluded talks last week with Herr Willy Brandt, chairman of the Social Democrats (SPD) in West Germany. Herr Brandt said afterwards that Herr East German leadership's "determination" to a flow more East Germans to visit their families in West Germany in urgent family matters such as a death or marriage. Last year 61,000 East Germans under retirement age were permitted to visit their families in the

Herr Erich Honecker

West but the rate of visits dropped to 33,000 in the first eight months of this year. A joint communiqué said both

sides would do their utmost to keep outer space free of the arms race, a reference to the Reagan Administration's Strategic Defence Initiative which Herr Honecker condemned in a banquet speech.

The communiqué said Herr Brandt favoured a "security partnership" between East and West Germany to keep the level of armaments on both sides at the lowest possible level. Both men agreed further deployment of nuclear weapons in Europe should be halted.

Herr Brandt noted at a news conference afterwards that Herr Honecker told him the new medium-range Soviet missiles deployed to East Germany could reach the Rhine in "less than one minute."

Coal subsidies row eases

BY OUR BRUSSELS STAFF

THE EUROPEAN Commission is backing away from a damaging dispute with the British Government over the control of subsidies to the coal industry after the end of this year.

When the 14-strong-Commission meets today it will be presented with a paper from Mr Nicholas Moser, the Commissioner for Energy, recommending the extension of the existing system for coal subsidies for a further six months and then a further year before a new system is introduced.

Coal is effectively exempted from

the normal competition rules of the EEC, but the exemption runs only until the end of 1985. Strict application of the competition rules would prohibit subsidies.

Thinking in the Commission on a new system for coal subsidies started from the point of tightening up the provisions under which aids would be permitted, thereby bringing national industries under closer control from Brussels.

But Mr Peter Walker, the UK Energy Secretary, has made clear that, because there is virtually no intra-Community trade in coal,

there is no case for Brussels control. This view reflected Whitehall sensitivity about what it sees as interference from the Commission.

But it is the timing which suggests that a row with the UK will be avoided. Mr Walker has announced a £2.85bn (\$3.78bn) subsidies programme to support the National Coal Board for 1986-87, but it will not support losses after that.

If this plan is followed then there would be little time left to run into arguments with the Commission about whether this or that subsidy is justified.

We're giving non-stops the green light.

At Cathay Pacific, we believe the faster we get you to your destination, the better shape you'll be in when you arrive. So wherever possible, even when long distances are involved, we fly you non-stop. We're still the only airline that can fly you non-stop from both London and Frankfurt to Hong Kong. And back. Together with our non-stop flights between Hong Kong and Vancouver, and the first ever non-stop service between Rome and Hong Kong*, they form a unique group of services designed to help you spend less time in the air. A case of really pulling out all the stops to help you arrive in better shape.

Arrive in better shape

China to allow N-plant visits

BY PATRICK BLUM IN VIENNA

CHINA WILL allow international inspection of some of its nuclear installations, Zhou Ping, Deputy Minister for the Nuclear Industry and head of the Chinese delegation at the annual conference of the International Atomic Energy Agency (IAEA) in Vienna, announced yesterday.

China only has a few research reactors and some nuclear laboratories, but it also has an important nuclear development programme with nuclear power plants in Guangdong and Liaoning, China where there is a high concentration of industry and energy supplies are scarce, Ping said.

He said his Government had decided to "voluntarily offer to place some of its civilian nuclear power installations under IAEA safeguards at an appropriate time," after further consultations with the agency. The decision, he emphasised, was "made in line with China's independent foreign policy. It is not the result of any bilateral negotiations."

The announcement was welcomed with surprise by delegates at the conference. China was the only nuclear weapons state which had

not until now allowed such inspections.

Ping said that China was eager for the widest possible international co-operation on the development and use of nuclear power for peaceful purposes and called for greater efforts by the agency in providing technical assistance to developing countries.

That theme was taken up by most speakers from Third World nations who repeatedly criticised the advanced industrialised nuclear states for "over-emphasising nuclear safeguards and non-proliferation rather than the transfer of nuclear technology and know-how."

Mr Raja Ramanna, chairman of India's Atomic Energy Commission, warned that India could not accept "so-called non-proliferation measures which actually legitimise the possession of nuclear weapons by some states" while the latter lectured developing countries about their democratic obligations and asked them to compromise sovereignty.

Mr Ramanna also called for more regional co-operation through agreements similar to the one between Asian and Pacific countries,

established in 1972.

Earlier, Mr Munir Ahmad Khan, chairman of Pakistan's Atomic Energy Commission, reaffirmed his country's commitment to improve relations with India on issues related to nuclear power. The two countries harbour strong suspicions about each other's nuclear programmes, but Mr Khan stressed Pakistan's readiness to enter into negotiations with India on these issues.

Pakistan, he said, had already expressed its willingness to subscribe to the nuclear Non-Proliferation Treaty (NPT) simultaneously with its neighbour, to agree on the reciprocal inspection of each other's nuclear facilities and to sign a formal joint declaration by the heads of both governments disavowing the manufacture, purchase or deployment of nuclear weapons.

"We are prepared to enter into high-level consultations to consider these or any other positive and constructive proposals," he said. Britain, which faces strong criticism over the dumping of radioactive waste at sea at a meeting this week in London reaffirmed its opposition to further restrictions

To compete worldwide we need not only the latest technology but people who will adapt to it

DAVID ALLIANCE GROUP CHIEF EXECUTIVE VANTONA VIVELLA PLC

Here are just two reasons why Vantona Vivella chose Northern Ireland as an ideal location. Others are:-

- A highly skilled workforce whose productivity is renowned.
- The best labour relations record in the UK — better than most throughout the world.
- The best overall financial incentives package in Europe.
- An enviable quality of life — many executives, once there, are reluctant to leave.

Find out more about a place where other companies have invested and where people love to live and work. Learn about the generous and flexible incentives that make it easy to become more profitable quickly.

Sweden's external payments deficit mounts rapidly

BY KEVIN DONE IN STOCKHOLM

SWEDEN accumulated a deficit of SKr 12.9bn (£1.1bn) on the current account of the balance of payments in the first seven months of the year, and preliminary indications from the Riksbank, the Swedish central bank, suggest the deficit had reached SKr 14.15bn by the end of August.

The rapid deterioration in the country's external payments position is one of the most pressing problems on the economic agenda in the wake of last week's general election.

The SKr 12.9bn deficit in the seven months to July compares with a surplus of SKr 5bn in the corresponding period last year when the current account emerged from deficit for the first time since 1974.

Even as late as April this year the Government was still forecasting a deficit for 1985 of only SKr 8.1bn.

Sweden's external payments position has worsened this year as imports have risen far more rapidly than exports.

The trade balance showed a surplus of only SKr 5.2bn in the first seven months compared with a surplus of SKr 15.6bn in the

first seven months of 1984. Imports have been rising fast because of both higher private consumption and a big jump in industrial investment which has increased the demand for foreign capital goods.

During the election campaign the Social Democratic Government ruled out emergency economic measures during the autumn, but the problems are now beginning to pile up with most forecasts indicating a significant slowdown in the rate of economic growth next year.

Sweden still has one of the highest rates of inflation in Europe, in spite of an improvement in recent months, and there are already worrying signs that next year's wage round will bring an increase in labour costs well in excess of Sweden's main trading rivals.

When they regained office three years ago the Social Democrats set a target of boosting economic activity and improving international competitiveness was a dramatic 16 per cent devaluation, but Mr Kjell-Olof Feldt, the Finance Minister, has repeatedly ruled out another such move.

Florence elects Paris Opera chief as mayor

BY JAMES BUXTON IN ROME

THE municipal council in Florence has elected Sig Massimo Bogliaccino, superintendent of the Paris Opera, to be the city's new mayor. Sig Bogliaccino announced immediately that he is resigning from his post in Paris.

Sig Bogliaccino, who is 63, is a Socialist councillor in Florence. He is not a Florentine by birth—he was born in Rome—but was for seven years until 1982 superintendent of the Teatro Comunale, the Florence opera.

He will preside over a coalition of Socialists, Communists, Liberals and Social Democrats together on Monday night after four months' wrangling following the local elections in May.

The election of a mayor in Florence means that the process of forming administrations for Italy's leading cities is at last nearing completion. Whereas in Florence the mayor in May, in effect, threw out a

five-party coalition which included the Christian Democrats, in most major cities there was a swing to the Right.

The consequence has been the departure of the Communist Party from the government of Milan, Turin, Venice, Rome and elsewhere. Roma now has a Christian Democrat mayor, Sig Nicola Signorile, who has replaced Sig Ugo Vetere, a Communist.

But Milan, Turin and Venice still have Socialist mayors. In the case of the first two cities the same men as before the elections. This is because the Socialist Party swiftly switched alliances in these cities from the Communists to the Christian Democrats.

Sig Bogliaccino has given no indication as to why he should prefer the politics of an Italian city to those of one of the world's major opera houses. In his acceptance speech he spoke of the impact of becoming a mayor of Florence.

Andriana Ierodiconou on the Greek Socialists' call for economic austerity
Chill wind ends Athens' long hot summer

IT HAS been a long, hot summer for the Greek economy. After nearly four years of insisting that recovery could be achieved without pain, Greece's ruling Socialists suddenly issued a Mayday call at the end of August.

Greeks must start producing more and consuming less, or risk mortgaging the country's future to the international banking system.

The alarm was sounded by Dr Andreas Papandreu, the Prime Minister and a former economics professor, in his first major economic policy speech since winning the June 2 general election.

The price of that victory, the Prime Minister pointed out, is that the Socialists must impose an immediate and drastic economic austerity programme on Greece—before an external agency such as the International Monetary Fund (IMF) steps in.

Politically, the Government is well placed for the job. The Socialist Party won 48 per cent of the vote, a remarkably small erosion of only 2 per cent in their electoral strength gained in 1981. The conservative opposition, trounced twice in four years, is in disarray and unable to exploit the Government's unpopularity.

"If the Conservatives had won and tried to apply austerity, there would have been a wholesale revolt and they would have fallen. Only the Socialists can pull this off—that's why their responsibility is enormous," said one Conservative.

The question of whether the Government will rise to the occasion is preoccupying foreign bank risk analysts, now arriving in Athens to assess the situation.

The Government has retired behind closed doors to work out an austerity package in consultation with trade unions and the private sector.

So far, the only taste of things to come has been a series of price increases, including petrol, insurance premiums,

transport, school fees, bread and meat. Measures are expected to begin to be applied next month, culminating in the presentation of the 1986 budget in November.

The most pressing problem is the country's high current account deficits. This is followed closely by ever-widening public sector deficits, double-digit inflation three times the EEC average, a six-year precipitous decline in private investment, and an industrial sector badly hit by EEC competition since accession in 1981.

The need for an immediate and severe tightening of economic policy to curb high foreign borrowing trends was first noted in a courageous Bank of Greece annual report circulated about a month before the June election. The Government was still reeling on the laurels of a real gross domestic product growth of 2.4 per cent in 1984, a modest decline in inflation to an annual rate of 18.5 per cent and a roster trade balance.

The report stressed that chronic high current account deficits were a blot on Greece's long-term economic prospects. It noted that since the second oil shock of 1979 when Greece's current account deficit doubled, it has ranged between \$1.9bn and \$2.4bn, or 4.9 per cent and 6.8 per cent of GNP, reflecting a steady slump in vital invisible earnings from shipping, immigrant worker remittances and, to a lesser extent, tourism.

Low quality and poor market have not allowed Greece to take full advantage of the EEC with the result that, said the Prime Minister: "We are the single instance of a country whose exports cover less than 50 per cent of imports." The gloomy post-1979 picture is completed by a drastic decline in private capital inflows, which Greece relied on until 1979 to cover more than 80 per cent of the current account deficit, to roughly half

Dr Papandreu: drastic and immediate measures

the deficit in the years since. Greece's long- and medium-term foreign borrowing almost tripled between 1978 and the end of 1984, going up from \$4.489bn to \$12.358bn according to Bank of Greece figures. OECD and BIS figures, which include foreign exchange deposits in Greek banks and military debt, place Greece's external debt at \$18.67bn at the end of 1984.

It is estimated that for the last 10 years, 75 per cent of Greece's annual foreign borrowing on average has been going to service the overall foreign debt. In 1984, debt repayments reached \$1.945bn or 19.1 per cent of receipts from the export of goods and services, according to the central bank.

Greece's overall public sector deficit has been increasing steadily since 1980 and the net public sector borrowing requirement reached 15.5 per cent of GNP in 1984. People talk about the U.S. deficit. That's nothing compared with what's going on here," one American

banker remarked.

Foreign bankers are sounding a note of caution. "Speculating about whether a country's credit rating might decline is tricky: it could act as a self-fulfilling prophecy. But some banks do appear to have pushed the pause button on Greece, until it becomes clear what stabilisation measures the Government intends to apply," said one banker.

Caution on the part of banks has been reinforced by severely off-target six months balance of payments figures for 1985. According to the central bank, at the end of June the current account deficit had already reached an alarming \$1.9bn, virtually equal to the target for the whole year.

Exports and invisible earnings are down, while imports (particularly fuel oil) and debt servicing payments are up. The Government's target of a current account deficit equal to 5 per cent of GNP this year is now considered unrealistic and the deficit is generally expected to be of the order of \$2.5bn.

The Government was criticised for unduly optimistic targets, not only regarding the current account but also for public and private gross fixed investment, and consumer price projections. In the staff appraisal appended to the latest IMF report on Greece, issued in April.

The appraisal, which predates the latest balance of payments figures, predicts a current account deficit of at least 6 per cent of GNP this year. It notes that the Government had said that a downward revision of annual growth rates of about 3.5 per cent projected in the 1985-1987 five year plan would have to be revised downward.

The IMF appraisal also plots a series of foreign debt scenarios for Greece. In the most optimistic scenario, which assumes a 3 per cent annual increase in non-debt financing, Greece's interest and amortisation payments are estimated to

exceed the \$2bn market in 1986 and to rise rapidly thereafter as previous debts expire to about \$3bn in 1990.

It is not surprising that there is talk in Athens of the authorities turning to the EEC for help.

The idea would be to resort to Articles 108 and 109 of the Treaty of Rome, which allow for special measures, for example import restrictions, in the case of a balance of payments crisis. There is also the community's balance of payments support fund for lending at low interest.

Greek officials say the EEC rescue scenario "is within the realm of the possible" and refer to the previous examples of France, Italy and Britain.

Economic observers in Athens are also speculating on the possibility of re-scheduling amortisation payments with foreign banks.

Whatever bailing-out scheme the Socialists resort to, they will be required to bite the bullet, taking drastic measures to curb the current account and public sector deficits and to shake the nation out of its inertia and into higher productivity.

Foreign bankers say that what they will be looking for in the Government's expected austerity package is a significant limiting of the system of index linking wages, a slash in public spending, a real devaluation of the dracma, either by an outright devaluation or by continuing the present slide, and realistic incentives to encourage harder work.

They also stress that time is of the essence. "Two months to introduce austerity measures is fine, two years is too long," one banker said.

Dr Papandreu will have to muster all the economic skills at his Government's disposal if the Greek economy's long hot summer is not to give way to many winters of discontent.

Turkey and Libya sign payments accord

TURKEY and Libya signed protocols yesterday on banking and economic cooperation, although a minister involved said they almost failed to agree, Reuters reports from Ankara.

The semi-official Anatolian News Agency quoted Mr Cahit Aral, the Industry Minister, as saying: "We finished our work at the last minute. My heart nearly stopped. Now it is over." The agency said Mr Yavuz Canevi, Central Bank governor of Turkey, and his Libyan counterpart Mr Rajab Misselati agreed to establish special accounts at their institutions to regulate payments between them.

The accord relates to debts to Turkish construction companies working in Libya, said to total \$400m, and the unpaid wages of some Turkish workers there.

Mr Aral said: "There is now a mechanism in place to deal with the issue of the payments. If it works there should be no problem in payments to the contractors who are waiting for their money."

Prime Minister, told a news conference areas of economic cooperation to be explored included trade, agriculture, irrigation, electricity, petrochemicals and fertilisers.

A new agreement was reached on Turkish purchases of Libyan oil. Mr Aral said, but gave no details. Falling oil revenues have led Libya to cut drastically its purchases from Turkey. David Banerjee adds: In general Turkish foreign policy is shifting steadily towards closer links with the Arab moderate states and Egypt in particular. Turkey so far has fended off requests from the Libyan leader Col Muammar Gaddafi to be allowed to pay a state visit—a visit which would be highly embarrassing to the country's Nato allies.

Spain seeks Polisario-held fishermen

SPAIN is seeking the prompt release of six fishermen captured by Polisario Front guerrillas of Western Sahara in weekend attacks in which a naval petty officer and a fisherman died off the coast of the disputed territory, Reuters reports from Madrid.

The guerrillas admitted in a statement to Spanish news media yesterday that they mistook the trawler *Junquito*, which they sank, for a Moroccan vessel and fired at the patrol boat *Tagonago* that went to its aid.

They called the attacks "an unfortunate incident in a war zone" and said it was difficult to distinguish Spanish vessels from Spanish-made Moroccan navy patrol boats.

The Polisario Front is fighting to establish an independent state in the Western Sahara, a former Spanish colony now administered by Morocco.

Spanish Prime Minister Sr Felipe Gonzalez told reporters yesterday his top priority was the immediate release of the fishermen.

AMERICAN NEWS

The Strategic Defence Initiative has made a reality of the U.S. Air Force's dream of its own manned space flights, writes Peter Marsh

Military space centre to launch Star Wars shuttles

IN AN isolated Californian valley between the Santa Ynez mountains and the rocky Pacific coast, workmen are putting the finishing touches to a grandiose construction project that for the U.S. Air Force will make a 22-year-old dream come true.

The project is Space Launch Complex-6, known by military officials as Slick-6, which from next March will act as the air force's site for putting people into space.

Space shuttles launched from the centre will play a key part in putting into space experiments as part of President Ronald Reagan's Strategic Defence Initiative ("Star Wars"). It will be controlled in orbit by a new U.S. Space Command, based in Colorado Springs, which was officially activated this week.

Discovery, one of the U.S. Government's space shuttle fleet, is due to make the first flight from Vandenberg complex carrying a team of seven astronauts and a secret Defence Department payload that includes Teal Ruby, a scientific satellite which will test ways to track missiles and other space objects by sensing infra-red radiation.

Slick-6 is part of the 150 square mile Vandenberg air force base 50 miles north of Santa Barbara. It marks for the U.S. military the culmination

of an ambition that began in 1963 to have its own manned space programme independent of the National Aeronautics and Space Administration (Nasa), the U.S. civilian space authority.

In that year, the air force announced it would build the Manned Orbiting Laboratory, a space craft based on the two-person Gemini developed by Nasa as part of the drive to put people on the Moon.

The laboratory project was cancelled in 1969, during a round of budget cuts, forcing the air force to rely for its space activities on unmanned satellite launchers such as the Titan and Atlas rockets.

There are some in the U.S. military establishment who wish this policy had remained unchanged. While putting satellites into space with tried and tested expendable rockets is a safe and relatively inexpensive technology, the manned shuttle programme has been plagued by technical difficulties and cost overruns.

Nasa has had to shoulder the \$12bn (£3.45bn) financial burden of building America's fleet of four shuttle vehicles, but the air force will be allowed to use the craft for its own dedicated missions from Vandenberg.

The Californian base also acts as a site for about 10 launches a year of military satellites using expendable rockets and for test shots over the Pacific of

ballistic missiles. It was chosen for military shuttle missions mainly because it is in a suitable position for ejecting into the heavens satellites that fly in orbit over the North and South Poles. Such space craft (for surveillance, for instance) account for a large proportion of military satellites.

Another reason is that the remote location of the Vandenberg establishment, which started operations in 1957 on the site of an army training

Nasa sites do not provide the degree of security needed for military missions such as the launching of classified satellites or scientific experiments in orbit involving possible equipment for SDI.

camp, suits the air force's requirements for launching secret payloads.

Without Vandenberg, the military would be forced to turn for shuttle launches to Nasa's facilities such as the launch site at the Kennedy Space Centre in Florida (which is any-how unsuitable for ejecting into space polar satellites) and the

mission-control operation at the Johnson Space Centre in Houston.

Both sites are open to the public and do not provide the kind of security needed for military missions, either the launch of classified satellites or scientific experiments in orbit involving new kinds of sensors and other equipment that could be developed during the SDI project.

The air force has found that independence in space does not come cheaply. Slick-6 was supposed to save money by using a launch pad on which work had already started in the 1960s for the cancelled manned orbiting laboratory. But the cost of the venture has soared, from an estimated \$800m in 1977 to a final bill likely to be about \$2.8bn.

The timetable has also slipped. The first shuttle launch from Vandenberg will be nearly four years later than the scheduled date when the project was planned in the late 1970s.

Most of the money has been spent on three immense structures that are the most visible part of the shuttle launch complex. The tallest, at 270 ft, the height of a 30-storey building, is the mobile service tower, which will be used for final modifications to shuttles as they sit on the pad and to provide services such

as liquid fuel and electricity before launch.

The two other buildings are for preparation of payloads such as satellites and for assembly of the components for the complete shuttle vehicle (the manned orbiter that returns to earth, the external fuel tank and the solid rocket boosters) prior to launch.

Apart from the fact that Vandenberg will assemble shuttle components on the launch pad rather than, as in established Nasa practice, at a separate building some miles away, the launch facilities in California are near facsimiles of those at the Kennedy Space Centre.

Operating Slick-6 will cost \$400m a year, about half the total bill for running the complete Vandenberg base. The cost includes training crew and refurbishing shuttles for further launches after they have returned to Vandenberg's own runway, which has had to be specially lengthened.

Military missions from the Californian base will be supervised from a \$1bn satellite and shuttle control centre 800 miles away at Falcon air force station in Colorado Springs. The centre comes under the control of the U.S. Space Command, which will eventually co-ordinate U.S. Air Force, Navy and Army activities in space.

The schedule calls for a total

of about 10 shuttle launches from Vandenberg until 1990. Thereafter, the base will probably be called on for four shuttle flights a year, although it would be capable of handling 10.

Most, but not all, the launches will be military. Vandenberg will also offer its services to Nasa for civilian shuttle missions that require a polar orbit, such as the launch of weather satellites.

To ensure no one is in doubt over who is running the Californian operation, however, the letters USAF are emblazoned 30 ft high, along with the stars and stripes, on the wall of Slick-6's shuttle assembly building.

Eventually, say shuttle enthusiasts in the air force's space command, the advantages of having people in space to supervise satellite launches or develop new weapon systems will outweigh the cost of putting them there.

When Discovery lifts off from the base next year, no one will be prouder than Col Orlando Severo, the commander of the air force's shuttle test group who has worked on the project since 1977.

"It's an immense challenge to fly the first manned space flight programme from the West Coast," he said. "I feel I've got the best job for my rank in the whole of the air force."

Congress research agency casts doubt on value of SDI

THE GOAL of assuring the survival against unconstrained nuclear attack of U.S. cities with an anti-missile system as envisaged in President Ronald Reagan's Strategic Defence Initiative, "does not appear feasible," according to a report from the Office of Technology Assessment, a research arm of the U.S. Congress.

The report, published today, is more optimistic about the likelihood of developing in the near future a space-based system to protect U.S. missile silos and other hardened targets.

But the office says it is not clear whether such a set of hardware, coupled with the likely response by the Soviet Union to expand its anti-ballistic missile defence around Moscow to include other cities, would strengthen the cause of deterrence.

According to the Reagan Administration, research conducted during the five-year, \$26bn (£13.6bn) defence initiative, more popularly called the Star Wars programme, could pave the way for both the U.S. and Soviet Union to install in the 1990s their own defensive systems to reduce the danger posed by nuclear missiles and eventually make them obsolete.

The systems could employ exotic technologies such as laser guns and orbiting battle stations to shoot down warheads while in flight.

But the report, written by a team of researchers led by Dr Thomas Karas, a senior analyst at the OTA, is guarded about whether the programme could achieve this aim without accompanying arms-control agreements during both the research

and deployment phase of an anti-missile defence programme. "In essence, the question is whether a vigorous U.S. programme to develop ballistic missile defence... will save the Soviet more willing than the Soviet more willing than they have been in the past (or not say they are) to agree to deep reductions of strategic offensive forces," says the report.

Notwithstanding the technical questions over the feasibility of anti-missile defences, the OTA stresses considerable political uncertainties involved in pushing ahead with a vigorous research effort.

The SDI offers an opportunity substantially to increase our nation's safety if we obtain great technical success and a substantial degree of Soviet co-operation... (It) carries a risk that a vigorous ballistic-missile defence research programme could bring on an offensive and defensive arms race, and a further risk that... deployment, if it took place without Soviet co-operation, could create serious instabilities.

In an accompanying report on anti-satellite weapons, the OTA research team says that to counter the threat from Soviet devices of this kind, the U.S. should increase its efforts to develop "survivable" spacecraft. At the same time it should explore ways of reducing the effectiveness of the weapons through arms-control agreements.

Ballistic Missile Defense Technologies and *Anti-Satellite Weapons, Countermeasures and Arms Control*, both available from U.S. Government Printing Office, Washington DC 20540.

Canadian banking staff strike a blow for unionism

BY BERNARD SIMON IN TORONTO

CANADIAN financial institutions are taking an unusually close interest in the progress of labour disputes at the Canadian Imperial Bank of Commerce, the country's third largest banking group.

Since mid-June, 150 members of the fledgling Union of Bank Employees have maintained a strike at CIBC's main Visa credit card processing centre in suburban Toronto with the long term aim of securing a bridgehead for a trade union drive throughout the financial services industry.

The union stepped up its version of guerrilla warfare last week when 60 workers in CIBC's central mailroom walked off the job. While their colleagues at the Visa centre try to disrupt the merchant authorisation system by jamming its switchboard with up to 30,000 calls a day, the mailroom workers have mounted pickets outside the parking garage of CIBC's office in downtown Toronto, hoping to disrupt deliveries and inconvenience other tenants in the 57-storey tower block.

The immediate issue at stake in both strikes is wages. CIBC last granted a general wage increase to its 32,600 employees in 1983.

The bank went through a rough patch in the early 1980s when concern grew at its heavy exposure to such troubled companies as Massey-Ferguson and Dome Petroleum. But it has staged a spirited recovery in the past 18 months.

CIBC has assets of C\$74bn (£47.7bn) earnings have risen by 34 per cent in the past year to C\$260m in the nine months to July 31.

The underlying issue in the two disputes is much wider than pay. Canada's banking industry is among the few sectors of the economy where trade unions have failed to secure a foothold. Only about 60 of 7,500 bank branches are unionised.

The Union of Bank Employees expects that if it wins at CIBC, it will greatly enhance its chance of acceptance in other parts of Canada's financial services industry.

For that reason, CIBC and other employers are anxious to nip the union movement in the bud. Salaries made up 12 per cent of the bank's total costs including interest expenses. In 1984, employment conditions are roughly the same at all the major institutions.

The two strikes at CIBC mark an important change of

tactics for the union. Instead of concentrating its organising efforts on relatively small, far flung branches, the UBE has decided to target what one organiser calls the "bank factories," the large centralised departments where a work stoppage can seriously disrupt a bank's overall operations.

According to the union official, "there's a different kind of employee" in the centralised departments. "They are much more militant and much more aware of what their needs are."

The lack of enthusiasm for collective bargaining in the branches is illustrated by the withdrawal of 78 bargaining units from CIBC's main affiliation since January 1980.

The UBE's most recent recruits are in CIBC's mortgage department, where a majority of workers has signed up as members and requested recognition as a bargaining unit.

Neither the union nor CIBC shows any sign yet of backing down. Thanks to financial support from Canada's main labour federation, the Canadian Labour Congress, the UBE is providing unusually generous strike pay of C\$300 a week to the Visa and mailroom strikers.

It has also enlisted the support of the country's most charismatic trade unionist, Mr Bob White, head of the United Auto Workers' Union. Mr White has appeared on the picket lines, and the UAW has seconded a seasoned negotiator to the bank union.

CIBC says all its planning is on the basis that it is going to continue business as usual. Students were hired to help run Visa operations during the summer. Some work has been contracted out. The bank has raised the limit for authorisation of some credit card purchases. Employees have been moved from other parts of the bank to the mailroom, and internal mail is being delivered to fewer points in the bank.

The union refuses to reopen bargaining talks until the bank substantially improves its terms for a contract. But CIBC insists that it will not make a better offer to union members than to the rest of its workforce.

A bank official describes the impasse as a "classic standoff." The last strike at CIBC, involving a branch in Quebec, lasted 17 months. In that case, the union capitulated, but it did not have access to the resources then which it apparently has gained.

EUROPCAR'S WORLDWIDE WELCOME

LONDON

DUBAI

From Britain's Biggest Car Rental Service.

Europcar is Britain's biggest car rental company with over 270 outlets across the UK. That's more than our two nearest competitors combined.

We're the only company with Rail Drive facilities at InterCity stations. 75 stations, to be exact.

And we've rental locations at 25 UK airports. But our welcome goes a lot further than just the British Isles.

For example, would you expect a Europcar outlet in the heart of downtown Dubai?

Actually there are three.

In fact, our Worldwide Directory

goes from Abu-Dhabi to Zimbabwe. Stopping at over 3,000 points in 110 countries in between.

All the places you'd expect of course. Like Geneva and New York. But at plenty of places you wouldn't. From Panama to Peking.

Places that sound pretty out of the way. Until you need to get there.

Then you'll be grateful Europcar was there first. So next time you need a car, home or abroad, call our Central Reservations Office on 01-950 5050.

You'll find it a welcome change.

U.S. footwear and textile protectionists unite to fight Reagan

BY NANCY DUNNE IN WASHINGTON

PRESIDENT Ronald Reagan's trade initiatives have given birth to a new coalition in Congress, where protectionists of textile and footwear industries have joined forces to overcome an anticipated presidential veto.

With the support of Senator Robert Dole, the majority leader, Senator Strom Thurmond, a South Carolina Republican, has introduced a Textile-Footwear Bill with provisions on textiles considerably weakened from the original proposal in order to get wider acceptance. The number of countries targeted for large import reductions has been reduced from 12 to three - South Korea, Hong Kong and Taiwan. The three would face a maximum import cut of 30 per cent.

All other textile importing countries, with the exception of the EEC and Canada, would be limited to 1984 levels plus a 1 per cent increase per year.

The proposed legislation gives U.S. footwear eight years of protection, three more than recommended by the U.S. International Trade Commission (ITC). It would hold imports to a market share of 80 per cent and cap the number of shoes costing less than \$2.50 at 10 per cent of the total foreign market penetration.

The original textile legislation had 55 co-sponsors in the Senate

and 290 in the House - more than enough for passage but short of the two-thirds needed to override a veto. Backers hope that support from footwear forces will be sufficient to tip the balance.

"The numbers look good," said a spokesman for the Footwear Industries of America, which failed to get relief last month from the President despite a recommendation for quotas from the ITC.

He said that the President's trade initiatives had failed to deal with the issue of jobs, and legislators were not convinced that the President would carry his proposals through to the end. "People on the hill are mad," he said.

Four Republican senators have reportedly written to Senator Dole to warn that they will filibuster an attempt to attach the Bill to legislation under consideration this week.

Sixty votes are needed to end a filibuster, and such a vote would give a clear indication of the new measure's strength.

American business reacted favourably yesterday to the President's trade proposals but warned that it would take 12 to 24 months before the full impact was felt on the trade deficit.

The National Association of Manufacturers issued a statement welcoming the introduction of mixed credits

Developing countries' burden 'not unfair'

ALTHOUGH action by industrial countries is needed to improve their economic performance, the principle of responsibility for ensuring that developing countries also strengthen their economies lies with the developing countries themselves, the Fund says in its annual report.

The report, which is a negotiated document reflecting the views of the Fund's members, firmly rejects the arguments of those developing countries who maintain that they are being required to bear an unfair burden of adjusting to the world's economic situation.

The report makes it plain that the IMF believes that continued economic adjustment is needed in many developing countries as a foundation for sustained growth.

"Recent improvements in their (developing countries) external position can best be consolidated through prudent demand management and exchange rate policies, together with structural reforms aimed at improving the prices and other incentives for investment and production in the traded goods sector," the report says. It adds: "Particularly worrisome in this context is the surge in inflation in a number of developing countries."

The IMF maintains that what are widely seen in the developing world as the economic adjustment programmes it has insisted upon in return for IMF loans have proved effective. Discussing the performance of the developing countries, it says that the economic recovery last year was export led, but that developing countries also achieved an increase in their market shares of exports.

"Thus a significant fraction of the growth of exports can be ascribed to adjustment measures including exchange rate changes taken by developing countries themselves over the past several years," it says. "The recovery set in train by exports spread gradually to the domestic economy."

But it notes that in historical terms the developing world's recovery was sluggish, that it was unevenly distributed and that it was so slow in some areas that per capita income in 1984 "was some 20 per cent below what it had been in 1980."

Discussing policy issues it says that "generally speaking (developing) countries whose authorities reacted early and firmly to the weakening in their external position in 1980-82 were in a better position to take advantage of the upswing in world markets that began in 1983."

These were mainly Asian countries. In other developing countries the Fund expresses concern that the longer term outlook is more worrisome because "external adjustment has too often been associated with reduced investment and unchanged rates of domestic savings." It maintains that given the countries' heavy debt burdens, fiscal stimulus now would not be an effective way of stimulating growth.

Instead, it says, budgetary restraint is needed to raise domestic share of savings, but it warns that in many countries achievement of improved growth "has been seriously compromised by their inability to control inflation." The countries affected by high inflation "simply cannot afford the resulting misallocation and waste of resources."

So far as the industrial countries are concerned the IMF again calls for action to cut the U.S. budget deficit saying it would make a crucial contribution to sustaining the U.S. expansion. It makes it clear too that it believes that Japan has relied too much on export demand and that domestic demand is undeniably weak.

It reserves its strongest plea however for the fight against protectionism, saying that the industrial countries "have a special responsibility to lead the way to trade liberalisation." The rebuilding of confidence in the preservation of an open trading system will depend crucially on steps taken by individual countries, especially the major industrial countries, to honour their commitments to spurn now protectionist measures and roll back existing barriers.

ANNUAL REPORT STRESSES NEED FOR INTERNATIONALLY COMPATIBLE POLICIES

IMF urges greater economic co-ordination

THE International Monetary Fund yesterday called for greater international co-ordination in economic policy making. It said in its annual report that "any serious attempt to achieve greater exchange rate stability has to rest on the implementation of more appropriate and internationally compatible economic policies."

The report says such co-ordination is vital because continuing liberalisation of capital markets accompanied by inappropriate economic policies may result in large exchange rate changes. These stimulate protectionist demands.

"Ultimately an open multi-lateral trading system remains the most important requirement for a gradual improvement of the international economic situation," it says.

The IMF's judgments follow the announcement by the finance ministers of the Group

of Five major industrial countries last weekend of efforts to improve the co-ordination of their economic policies.

The IMF annual report is

Reports by Stewart Fleming, U.S. Economics Correspondent, in Washington

cations in its assessment of the effectiveness of intervention in the foreign exchange markets as an instrument for reducing volatility in exchange rates. "A durable influence over exchange rates can result only from the use of policy

tools that change underlying macro economic conditions," it says.

The fund says "sterilised intervention (intervention transactions that are not allowed to affect the money supply) seem to have some effect in calming disorderly markets." It cites the concerted intervention by a number of major industrial countries in February this year as an example of a successful move to damp or stop speculative exchange rate movements.

While warning that the European Monetary System could not easily be reproduced elsewhere, it maintains that the EMS has "been largely successful in stabilising exchange rates (and) there is little doubt that the commitment of the authorities in defence of central rates and the agreed intervention mechanisms have contributed to the success of the system."

The fund stresses, however, that this success has "largely been achieved through a convergence of (the EMS members') domestic policies and performance." It argues that merely attempting to restrict capital flows in an effort to achieve greater exchange rate stability is unrealistic.

Recent exchange rate trends have "given rise to substantial concern about strains on the international monetary system." The fund says the growing importance of international capital movements has continued to dominate developments in the exchange markets. Rapid changes in asset preferences and, therefore, exchange rates worked to "increase rather than diminish trade imbalances." Movements in competitiveness were often in directions opposite to those needed to re-establish a stable pattern of current account positions

amongst the major industrial countries."

The fund argues that divergent fiscal policies in the industrial nations, coupled with a policy based on control of the monetary aggregates in the U.S. contributed to the exchange rate movements of last year.

"Contrary to expectations floating exchange rates... have not in practice granted (governments) an extra degree of autonomy in pursuing their own policy objectives. Instead the experience of the industrial countries over the past decade has emphasised their interdependence."

The fund concludes that in the face of exchange rate volatility "it is important (for governments) to reduce uncertainty as much as possible by avoiding sudden shifts in announced policy measures and in the implementation of these policies."

Arrears force accounts change

The International Monetary Fund is changing its accounting practices for the first time because of the rising burden of arrears on its loans from countries in financial difficulties.

The fund also says that this problem and the accounting change explain the fact, for the first time since 1970-77, it suffered a loss of SDR 30m in its financial year ended April 30 1985.

The increased arrears had led to the establishment of new policies under which two countries, Vietnam and Guyana, were declared ineligible to use the fund's general resources.

In a step which will be seen as designed to step up the pressure on countries not to fall into arrears the IMF is now issuing a press release upon de-

claration of a member's ineligibility. The IMF noted a "marked decline" in financial activity in the financial year ending April 30, 1985.

Gross purchases declined from peak levels of about SDR 10bn in 1982-83 and 1983-84 to about SDR 6bn last year. The number of commitments for new lending fell from SDR 19bn to SDR 12bn.

Standby and extended arrangements in effect at the end of the financial year fell in number to 30 from 35 in 1983-84.

According to the fund, the slowdown "Reflected the recovery in world economic activity, coupled with the success of adjustment policies, and the consequent improvement in the external positions of many member countries."

De Larosiere: IMF managing director

Further allocation of SDRs 'backed by most directors'

MOST executive directors of the International Monetary Fund believe that there is a strong case for resuming allocations of special drawing rights, the currency reserves which the fund can create, the report says.

But in an oblique reference to countries including the U.S., it adds that some directors, who hold a substantial share of total voting power, disagree.

Heavily indebted developing countries have been increasing their pressure for another SDR allocation and the fund says that "the adequacy of reserves for countries without access to international financial markets requires further consideration."

"Stocks of reserves deemed optimal for these countries is probably greater than that of

countries with access to international credit markets."

The cost of acquiring and holding reserves is related to the necessity of generating net exports of goods and services, or of acquiring additional credits from official or multi-lateral sources, the fund points out.

The adjustments in domestic income growth and production required to generate payments surpluses imply "that the cost of reserve accumulation for countries without access to international capital markets is much higher than for countries with such access."

The fund adds: "For this reason the supply of reserves generated by international agreements, such as those relating to SDR allocations, takes on special importance."

Manley renews call for early general election

BY CANUTE JAMES IN KINGSTON

ENCOURAGED BY public opinion polls which have shown his People's National Party enjoying a significant advantage in popular support, Mr Michael Manley has renewed a call to Mr Edward Seaga, the Prime Minister, to hold an early election.

Mr Manley, a former Prime Minister, who recently returned to active politics after eight months recuperating from operations for a stomach disorder, said that if re-elected, his social democratic administration would seek different agreements with the International Monetary Fund.

Mr Manley was Prime Minister between 1972 and 1980, when the PNP suffered a landslide defeat by Mr Seaga's conservative Labour Party. The PNP refused to contest a snap election called by Mr Seaga in December, 1983, claiming the Prime Minister has reneged on an undertaking to delay all elections until a new register of voters was compiled.

The Labour Party has all 60 seats in the lower house. Mr Seaga has repeatedly rejected requests for an early election, saying he intends to serve a full five-year term.

The polls indicate that in a general election, the PNP would receive 45 per cent of the votes,

and the Labour Party 25 per cent.

Mr Manley's return to active duty has heightened political interest in a country in which political affiliation can be a matter of life and death. The police estimated that of the 800 people killed violently in 1980, about 600 were the victims of party political violence associated with that year's election campaign.

Mr Manley unveiled what he said was an "alternative" to Mr Seaga's monetarist policies in an address to the PNP's annual conference.

His statement of seeking better terms from the IMF coincided with an attack by Mr Seaga on the institution. The Prime Minister said he would be protesting the fund's "rigid loan conditions" at next month's IMF and World Bank meeting in South Korea.

Mr Manley told the conference that if returned to office, he would fix the parity of the Jamaican dollar which has been devalued repeatedly over the fallen 80 per cent against the U.S. dollar. Mr Seaga has rejected requests for a fixed exchange rate.

The former Prime Minister also promised improved links with countries in Western Europe, and with the U.S.

THIS NOTICE DOES NOT CONSTITUTE AN OFFER FOR SALE AND THE STOCKS LISTED BELOW ARE NOT AVAILABLE FOR PURCHASE DIRECT FROM THE BANK OF ENGLAND.

ISSUES OF GOVERNMENT STOCK

The Bank of England announces that Her Majesty's Treasury has created on 23rd September 1985, and listed to the Bank, additional amounts as indicated of each of the Stocks listed below:

£250 million 10½ per cent EXCHEQUER STOCK, 1997

£250 million 9½ per cent CONVERSION STOCK, 2004

The price paid by the Bank on issue was in each case the middle market closing price of the relevant Stock on 23rd September 1985 as certified by the Government Broker. In addition, Her Majesty's Treasury has created on 23rd September 1985, and has issued to the National Debt Commissioners for public funds under their management, an additional amount of £100 million of 10 per cent Treasury Convertible Stock, 1990.

In each case a prospectus issued on 23rd September 1985 represents a further tranche of the relevant Stock, ranking in all respects pari passu with that Stock and subject to the terms and conditions of its prospectus (save as to the particulars therein relating solely to the initial sale of the Stock), and subject also to the provision contained in the final paragraph of this notice; the current provisions for Capital Gains Tax are described below. Application has been made to the Council of the Stock Exchange for each further tranche of stock to be admitted to the Official List. Copies of the prospectus for 10½ per cent Exchequer Stock, 1997 dated 14th October 1977 and of the prospectus dated 13th January 1984 for 10 per cent Treasury Convertible Stock, 1990 (which contained the terms of issue of 9½ per cent Conversion Stock, 2004) may be obtained at the Bank of England, New Issues, Watling Street, London, EC4M 9AA. The Stocks are repayable at par, and interest is payable half-yearly, on the dates shown below:

Stock	Redemption date	Interest payment dates
10½ per cent Exchequer Stock, 1997	21st February 1997	21st February 1997
9½ per cent Conversion Stock, 2004	35th October 2004	25th April 2004

The further tranche of 10½ per cent Exchequer Stock, 1997 will rank for a full six months' interest on 21st February 1986. The further tranche of 9½ per cent Conversion Stock, 2004 has been issued on an ex-dividend basis and will not rank for the interest payment due on 25th October 1985 on the existing Stock. Official dealings in the Stocks on the Stock Exchange are expected to commence on Wednesday, 25th September 1985.

Each of the Stocks referred to in this notice is specified under paragraph 1 of Schedule 2 of the Capital Gains Tax Act 1979 as a gilt-edged security (under current legislation exempt from tax on capital gains on disposals made on or after 2nd July 1986, irrespective of the period for which the Stock is held).

Government statement. Attention is drawn to the statement issued by Her Majesty's Treasury on 23rd May 1985 which explained that, in the interest of the orderly conduct of fiscal policy, neither Her Majesty's Government nor the Bank of England or their respective servants or agents undertake to disclose tax changes which might affect the terms on which, or the conditions under which, these further tranches of stock are issued or sold by or on behalf of the Government or the Bank, that no responsibility can therefore be accepted for any omission to make such disclosures, and that such omission shall neither render any transaction liable to be set aside nor give rise to any claim for compensation.

BANK OF ENGLAND 23rd September 1985 LONDON

If a customer goes down, will he take you with him?

Many thousands of the 21,902 companies which failed last year went down simply because their customers did.

The truth is that bad debts aren't just frustrating and damaging. They can and do kill.

£5000 BAD DEBT = £100,000 LOST TURNOVER

For example, if you make 5% pre-tax profit on turnover, writing off a bad debt of only £5000 means that you have to find and service £100,000 of extra business just to repay the loss.

Obviously, it's no more sensible to leave your company unprotected against such a potentially lethal risk than to leave your premises uninsured against fire.

Insure your credit with Trade Indemnity and the risk is no longer a problem.

UP TO 90% OF YOUR MONEY BACK

When a debtor has become insolvent, this tailor-made insurance makes sure you get 75%-90% of the money he owes you within 30 days of confirmation of debt.

That takes a load off your mind when you are signing a big contract or when you depend heavily on a few large customers.

The cover is equally effective for export credit and can even protect you against political risk.

YOU AVOID BAD DEBTS

Using our credit performance data bank (one of the largest in the UK) and drawing on our wide experience of credit management, we also help you avoid bad credit risks, before they turn into bad debts.

Talk to your brokers about Trade Indemnity Credit Insurance now, before one of your customers brings you down.

Or post the coupon and we'll send you our comprehensive brochure. If you want we will also arrange for one of our consultants to call and explain how credit insurance can benefit your company.

Post to: Ann Cuthbert, Marketing Department, Trade Indemnity plc, 12-34 Great Eastern Street, London EC2A 3AX. Telephone: 01-739 4311.

Please send me further details on Credit Insurance.

Hong Kong land sale indicates concord

By David Dodwell in Hong Kong

THE HONG KONG Government yesterday held its first land auction since the establishment in May this year of the Sino-British Land Commission.

The auction, which involved six comparatively small plots of land, gave no real indication of property price trends, but gave a signal of substantial progress between British and Chinese officials working on land issues ahead of the transfer of sovereignty over Hong Kong into Chinese hands in 1997.

Evidence of progress on the land issue - one of the most contentious during the three years of secret negotiations in Peking on Hong Kong's future - is in contrast with continuing suspicion between Chinese and British officials in other areas.

For example, recent discussions on air traffic rights between Hong Kong and China have so far failed to rectify a huge imbalance in China's favour.

The Sino-British Land Commission was one of several bodies set up as a result of the Sino-British agreement intended to tackle practical problems arising out of the transfer of sovereignty.

Until recently, British Crown leases determined the rights of most Hong Kong property owners. Leases on Hong Kong island or in Kowloon - which were supposed to be held "in perpetuity" by Britain - could be as long as 999 years, while all leases in the New Territories expire in 1977, when Britain's colonial lease expires.

Under the Sino-British agreement, China agreed to honour existing property rights. Leases in the New Territories can now extend to the year 2047.

In the past, the Hong Kong Government's programme of land auctions was an important source of income. With the collapse of the property market in 1983 this has become less significant, but an average of about 50 hectares is auctioned every year.

This year's programme has been disrupted by the setting up of the land commission, whose task was to define new ground rules for future sales. If disagreements had emerged, yesterday's auction could not have gone ahead.

Rabbis extend their influence into all sectors of life

BY WALTER ELLIS IN TEL AVIV

JUDAISM'S month of religious holidays, culminating today in Yom Kippur, the Day of Atonement, comes this year at a time when the rabbinical influence over daily life and politics in Israel is more powerful, and more controversial, than ever before.

In Beersheba, capital of the Negev desert region, the local Rabbinical court decided last week that a man was entitled to divorce his wife and remarry on the sole grounds that she had borne him three daughters but no sons.

The case came before public scrutiny because the wife had had the temerity to object. The Rabbis concluded that, by virtue of her protest, she was a "rebellious" wife and gave her consent to the divorce.

Since there is no civil marriage, or divorce, in Israel and ancient Halachic law decides such matters, that was an end to it. Progressive women are outraged, but the wife never had a chance.

In Jerusalem, meanwhile, representatives of Israel's 12,500 Ethiopian Jews marched to the Walling Wall on Monday to protest about a ruling by the Rabbinical high court that they must undergo ritual immersion and reaffirm their faith before they can be permitted to marry.

After nearly a year in absorption centres in Israel, the Ethiopians are still seeking what, paradoxically, had brought about their dramatic rescue from Ethiopia in the first place: recognition of their status as Jews.

Once again, many ordinary Israelis, including some leading Rabbis, are appalled. But the religious establishment is standing firm.

El Al, Israel's state-owned airline, announced this month that the main reason for its deficit in the 1984-85 financial year was the Rabbis' insistence that it should not fly

in or out of Israel on the sabbath. "We are the only five-and-a-half-day airline in the world," a top official complained.

In the Israeli parliament, the Knesset, the ultra-religious parties, backed by several Likud MPs, are pressing for a ban on the production and sale of pig-meat (white steak to secular Jews).

"Kosher patrols" are on the streets in areas where local by-laws already prohibit the eating of pork, and officials with-tongs remove the offending meat and dish out fines instead.

There have also been calls for legislation that would ban traffic and non-essential work on the sabbath, and once again devout local councils are showing how it can be done.

Mr Uri Amit, mayor of the town of Ramat Gan, has banned league soccer from being played at the municipal stadium on the sabbath. Religious extremists vowed that if any games went ahead they would find ways to get even with the sports lobby.

The Labour Party, in a bid to improve its electoral fortunes, has opened negotiations with religious parties, normally the preserve of the right. Mr Shimon Peres, the Labour Premier, is currently taking instruction in the Tora and the Talmud from an assigned Rabbi.

Orthodox Jews argue, of course, that Israel is intended to be the Jewish state, founded to preserve Jewish values in a hostile world.

Non-religious Israelis respect the practices of observant Jews: increasingly they are concerned that this respect is not returned. In a society already deeply divided over its relations with the world outside, the internal struggle over Jewish fundamentalism could yet prove decisive at the polls.

Gun battles in Tripoli

RIVAL MOSLEM militias fought pitched gun battles in central Tripoli yesterday, sabotaging a Syrian-backed ceasefire. At least 10 people were killed and more than 15 wounded.

The fighting raged for the tenth day in succession along the boulevard that cuts through Lebanon's second largest city, only hours after senior Syrian army officers pro-

claimed a ceasefire. They said the commands of the warring militias had agreed to surrender their heavy arms.

Syrian-backed Arabian Knights militiamen were fighting pro-Palestinian fighters of the Tawheed Islami (Islamic Unification) movement 16 hours after the proclamation of the truce.

Walter Ellis examines the lengthy dispute between Egypt and Israel over Taba Political land mines litter a tiny beach

LAND IS politics in Israel. The existence of the state is so inextricably linked to the ownership of title, as well as to the Zionist concept of Eretz Yisrael that any moves which might result in a surrender of even a few yards of the nation "given by God to the Jews" is considered proof of treason.

Sinai escaped this logic. It was never considered an integral part of Israel. Taba, a strip of land along the Egyptian side of the Gulf of Aqaba and close to the Israeli resort of Eilat, is different.

First seized by the Israelis in the course of the Six Day War in 1967, Taba is believed by religious and other traditionalist Jews to be part of the promised land.

Egypt, not surprisingly, does not share this view and Taba is a main source of dispute between Cairo and Jerusalem and the cause of bitter acrimony within the Israeli Cabinet.

So serious has the infighting in Jerusalem become that Taba has even been suggested as a likely source of the long-predicted collapse of the "unity" Government.

President Hosni Mubarak of Egypt is demanding that Taba be restored to its "proper" place as a constituent part of Sinai. The right-wing Likud bloc in the Israeli Government is determined to hold on to it. It is seen by Jerusalem as the thin end of the wedge which

could be presented as a precedent for negotiations on the West Bank and Gaza. The Labour bloc is caught in the middle, unsure which way to turn.

Mr Mubarak wants the issue decided by international arbitration, and Mr Shimon Peres, the Israeli Prime Minister, and his Labour colleagues have already accepted the principle. However, the Likud bloc, led by Mr Yitzhak Shamir, the Foreign Minister, is implacably opposed.

A delegation of senior Israeli officials will arrive in Cairo tomorrow to hammer out the compromise deal. The Likud is outraged; Mr Shamir has insisted that the officials be given fresh instructions ruling out arbitration.

Mr Shamir, who is scheduled to become Prime Minister in 1986 in keeping with the rotation agreement after last year's inconclusive general election, is only prepared to accept conciliation: a purely bilateral manoeuvre which would not be binding on Israel. He has denounced a compromise formula worked out between Mr Mubarak and Mr Peres that would begin with conciliation but move on to arbitration in the event of an impasse.

Labour, said Mr Shamir, was trying to "deceive the people" and had provided Israel's enemies with "a tremendous propaganda weapon."

Ironically, there is little about Taba that is inherently

valuable. It is a mere 750 yards long and considerably narrower. Under Israeli occupation, it houses little more than a luxury hotel complex and a topless beach; hardly the stuff of confrontation.

Its true significance goes back to the Ottoman domination of the region and the subsequent changes under the British mandate in Palestine. The historical arguments are complex. They cover the precise imperial divisions under Turkish rule, the borders of Sinai and Palestine, as established by the British, and even the right of Egypt to hold away over Sinai at all.

Put simply, Egypt insists that Taba should have been returned to its jurisdiction along with

the rest of Sinai following the 1978 Camp David accords. The agreements signed at Camp David subject future discussions, but Israel has tended to argue that it is merely holding on to something that was its by right.

Unless the Israeli Government can come up with an agreed stance on Taba that would allow some form of negotiations to begin, the coalition may find that it cannot continue. New elections would have to be held, with Mr Shamir no doubt arguing that Labour had broken its solemn pledge on rotation.

The implications of an impasse would be even more serious for relations with Egypt. Mr Mubarak, it is clear, sees the resolution of the Taba question as a matter of national honour.

The Peres wing of the Labour Party is well aware of the delicacy of the situation. Israel gave the Sinai to the late Anwar Sadat; to Mr Mubarak they not even yield a strip of beach. This is the occasion that is said to rankle with Egypt's President.

The so-called process of "normalisation" between two former enemies has already proved difficult enough without Taba. Israel claims that it has made most of the running up to now, despatching armies of tourists, businessmen and traders, while the Egyptians drag their heels.

Israel points, for example, to the stark imbalance of trade. In the six years to June this year, Israel had purchased more than \$3bn worth of Egyptian oil while in return Egypt had bought goods and services from Israel worth only \$200m.

However, it was the Israelis, under the terms of Camp David, who insisted on the oil sales, and it is the Israelis who gain most politically from the exercise.

Egypt got much of what it wanted when it regained the Sinai (although it continues to be frustrated by the lack of progress on the occupied territories). What Jerusalem now expects is "normal" relations between neighbouring states regardless of the fact that, for Egypt, this must mean a further intensifying of the charge of fraternising with the enemy. Egypt knows the risks and is still seeking a political return on its virtual freezing of relations between the two which followed the 1982 invasion of Lebanon showed all too clearly how delicate the process is and how susceptible it is to Israel's actions elsewhere in the Middle East.

Egypt does not wish to be seen to be too close to the Israelis, and in Jerusalem there is still residual distrust of Cairo's long-term aims. Embassies, cultural centres and air services are one thing; talks about the land are another.

Lagos 'remains committed to industrial projects'

MAJOR GENERAL Ibrahim Babangida, the Nigerian leader, who seized power in last month's coup, promised yesterday far-reaching economic measures but said his Government was committed to going ahead with a series of costly industrial development projects started under previous administrations.

He told an economic seminar the time had come to take measures, some of which would be painful, to put Nigeria back on a path to economic growth.

But the Government was giving top priority to key industrial projects, some of which have been under construction for years, and subject to major delays and cost overruns.

These included paper mills, fertiliser plants, a machine tool

factory, large petrochemical, steel and lignified natural gas projects and an oil refinery.

Gen Babangida also promised to remove bureaucracy which stood in the way of foreign investors wanting to set up ventures.

"Urgent efforts will be made to streamline procedures, eliminate bottlenecks and introduce workable incentives."

"What we need to do now is to create the right conditions that will attract badly-needed foreign capital to supplement our local resources."

He pledged recently to break the two-and-a-half year deadlock in negotiations with the PLO executive committee, a joint Jordanian-Palestinian delegation.

PLO members invited by UK get death threat

By Our Middle East Staff

THE EXTREMIST Palestinian faction headed by Sabri al-Banna, otherwise known as Abu Nidal, threatened yesterday to assassinate two members of the Palestine Liberation Organisation if they accepted an invitation by the British Government to visit London.

The invitation was issued last week in Jordan by Mrs Margaret Thatcher, the Prime Minister. She has asked Mr Mohammed Mikhel and Bishop Elias Khouri, both members of the PLO executive committee, to come to Britain as members of a joint Jordanian-Palestinian delegation.

Singapore plans to make wage system more flexible

THE Singapore Government has proposed a national wage scheme to bring down high labour costs, which includes scrapping minimum pay increases, Renter reports.

Brigadier Lee Hsien Loong, Minister of State, told a televised interview yesterday the scheme would make the present wage system more flexible.

"The problem is employees tend to be paid a fixed wage regardless of whether the company is doing well or poorly," said Brig Lee, the eldest son of Prime Minister Lee Kuan Yew.

The National Wages Council, a body representing the government, employers and unions set up 13 years ago, will no longer

recommend overall wage guidelines, Brig Lee said.

He also called for regular reviews of wage agreements linking incentive payments to productivity and an end to automatic pay increases based on seniority.

Government end business leaders have said high wage costs are a major cause of Singapore's current economic troubles.

In future, the NWC should "oversee" the wage system, foster good industrial relations, and annually "reach a consensus view of the state of the economy" to help influence unions—and employers—expectations before they engage in wage negotiations.

Prem brings new party into cabinet

By Boonsong K'Thans in Bangkok

GENERAL Prem Tinsulanonda of Thailand has appointed three cabinet members to fill industry ministry posts left vacant by the resignation of three former ministers whose party leader was implicated in the abortive coup on September 9.

Deputy Industry Minister Chiraya Isharangkura Na Ayuthaya, 43, succeeds Mr Ob Vashurana as Industry Minister.

Mr Wichai Viravaidya, 45, Thailand's family planning chief, and Mr Anant Chaisang, a Progressive Party member of parliament, become deputy ministers replacing Mr Prayote Nuansangchomong and Mr Phol Wongsakorn.

Mr Ob and his two deputies are members of the National Democratic Party whose leader ex-Prime Minister Gen Kriangsak Chomanon is charged of inciting a rebellion on September 9.

Gen Prem has replaced the NDP with Progressive Party, in the coalition, a small party which commands only three seats in the house of representatives.

He will meet U.S. leaders, including Secretary of State George Shultz, and address the U.N. General Assembly.

He will go on to Europe for talks with Prime Minister Margaret Thatcher of Britain, President Francois Mitterrand of France and Chancellor Helmut Kohl of West Germany before returning home on October 10.

Punjab forces step up poll security

SRI LANKAN security forces have stepped up security at a northern police station in a Punjab province election yesterday on the eve of elections in the northern Indian state, Renter reports from Amritsar.

Meanwhile, security forces rounded up about 300 people in a security crackdown to prevent violence during the poll to elect a state administration to replace two-year-old direct rule by the central Government in New Delhi.

As India's biggest peacekeeping security gathering of 150,000 police and paramilitary forces switched their attention from protecting candidates to guarding polling booths, Amritsar Police Chief I. J. Sidhu said: "There are apprehensions about violence and there may be shoot-outs, but we are ready for any eventuality."

The bomb, which exploded as it was being defused, caused no injuries.

Police defeat Tamil attack

SRI LANKAN security forces have stepped up security at a northern police station in a Punjab province election yesterday on the eve of elections in the northern Indian state, Renter reports from Amritsar.

Phosphate exports boost Tunisian trade figures

BY FRANCIS GHILES

TUNISIA'S trade deficit has been cut by 11.9 per cent to Dinars 355.3m (\$224m) in the first five months of the year. This decline was helped by a large increase in the exports of phosphate rock and textiles and came despite a surge in the value of imported crude oil and foodstuffs.

Imports of capital goods declined and is expected to continue doing so in the wake of austerity measures being introduced.

The record cereal harvest this year should further help in cutting the trade deficit. The total

East Daggafontein Mines, Limited			
Group interim report			
30 June 1985 (Unaudited)			
	Six months ended 30 June 1985	Six months ended 30 June 1984	Twelve months ended 30 June 1985
Revenue	278	177	208
Royalties	888	970	2,288
Interest received	1,108	1,147	2,496
Expenditure	1,480	442	1,832
Income (loss) before taxation	(294)	706	664
Taxation	179	363	440
Income (loss) after taxation	(473)	342	224
Extraordinary items	294	-	1,358
Income after extraordinary items	248	342	1,582

Results for the half year

- During the period, the group sold certain investments, rights under mining agreements, mining leases and claims, to Egoli Consolidated Mines Limited. These transactions resulted in a surplus of R2 607 000 and this amount is included in the figures for extraordinary items above.
- The group's investment at 31 December 1984 of shares in East Rand Gold and Uranium Company Limited, called for a dividend of R1 000 000 and the resulting surplus of R319 900 is also included under extraordinary items above.
- Expenditure of R1 480 000 includes exploration costs of Rm13 000 incurred by a wholly-owned subsidiary, Rand Extensions and Exploration Limited, formerly E.O. Exploration (Proprietary) Limited ("Rand Extensions"). As was announced in the press on 20 September 1985, Rand Extensions is to be listed on the Johannesburg Stock Exchange and consequently future exploration expenditure will be funded by Rand Extensions.

SPAIN, AN ENTIRE COUNTRY BEHIND THE TELEPHONE

In Spain, TELEFONICA has for sixty years been making the telephone something more than just a communication instrument. Recently TELEFONICA and its group of companies have made an enormous effort in research and technological developments. This has paid handsome dividends. Today every business sector in Spain benefits from TELEFONICA's advances in telecommunications.

The telephone is a powerful force for progress and TELEFONICA is already looking to the needs of the next century. TELEFONICA is now also present in the major international stock markets. Every step TELEFONICA takes in Spain is a giant leap for the progress of its society. That's why in Spain there is an entire country behind the telephone.

W. Germans to seek more Airbus orders in visit to Peking

BY DAVID MARSH

A DELEGATION of West German businessmen due to visit China next month will be exploring the possibility of making further European Airbus sales to Peking, following up on orders for three wide-body aircrafts clinched earlier this year.

The delegation, grouping industrialists and economists mainly from the German state of Bavaria, will be led by Herr Franz-Josef Strauss, Prime Minister of Bavaria and chairman of the Airbus Industrie supervisory board.

It will also include Dr Hanns-Arndt Vogels, chairman of Messerschmitt-Bölkow-Blohm, the German shareholder in Airbus Industrie, as well as Herr Johann Schaeffer, the former MBB executive who has now become the Airbus managing director.

Airbus is hoping that China will eventually order more A-310 wide-body aircraft after the initial batch of three sold in April.

The prospects for sales to China of the narrow-body A-320 aircraft launched as a formal programme last year and due to fly in 1988 will also be discussed.

The delegation includes

representatives of other industries apart from aerospace. Although the question of long-term aircraft co-operation between West Germany and China is likely to be high on the agenda, Airbus for the moment is not thinking of any concrete proposals for co-production arrangements with the Chinese.

The idea of China building parts of the A-320—possibly simple elements such as doors to start with—was already broached in preliminary discussions between Airbus Industrie and the Chinese last year.

Possibilities for work-sharing would nonetheless depend on overall capabilities of the Chinese aircraft industry.

Germany intends to offer, above all, technical support and training programmes to help China build up its aircraft expertise.

A representative of Deutsche Lufthansa, the West German national flag carrier, will take part in next month's trip to discuss co-operation with Chinese airlines.

China's aerospace industry in the past has already co-operated in assembly projects with McDonnell-Douglas and British Aerospace.

FT reporters look at worldwide trade and economic reaction to President Reagan's latest speech
Bonn 'can weather fall in \$ with ease'

By Peter Bruce in Bonn

WEST GERMANY'S strong trade and current account surpluses would enable the country to weather a fall in the value of the U.S. dollar with relative ease, Herr Martin Bangemann, Economics Minister, said in Bonn yesterday.

In a report produced in the wake of the decision taken at the weekend by major Western finance ministers in New York

Mr Malcolm Baldrige, U.S. Commerce Secretary, said yesterday the U.S. probably did not plan huge intervention in currency markets to reduce the dollar's value, Reuter reports.

Mr Baldrige said he believed the dollar's value needed to be reduced a further 20 per cent to allow U.S. exporters to compete overseas.

to work towards reducing the strength of the U.S. currency, Herr Bangemann sought to calm fears of a collapse of West German exports.

He said an orderly fall in the value of the dollar might do some damage to exports to the U.S. but that prices of imports of important raw materials, priced in dollars, to West Germany, would also fall.

Herr Bangemann's report coincided with publication yesterday of a particularly optimistic forecast on exports by the IFO economic institute in Munich.

West Germany's trade surplus would probably reach a record DM 75bn (£19.2bn) this year it said.

Japan blows hot and cold on policy moves

BY JUREK MARTIN IN TOKYO

JAPAN yesterday generally welcomed the broad policy implications both of the group of five meeting and of President Ronald Reagan's address on trade.

But concern was expressed about Japan's ability to meet accelerated U.S. pressure for further market opening measures in sensitive sectors.

Equally, there were doubts whether the President's speech would necessarily succeed in stemming the protectionist tide in Congress.

Speaking for the financial community, Mr Yusuke Kashiwagi, president of the Bank of Tokyo and a former senior Ministry of Finance official, saw a substantial and gratifying shift in U.S. attitudes.

This he attributed to the pragmatic influence of Mr James Baker, the Treasury Secretary, and possibly Mr Paul Volcker, chairman of the Federal Reserve Board.

He contrasted previous Administration statements, which had equated a strong dollar with national economic vitality, with the new recognition that an overvalued dollar was at the root of global trading imbalances.

The commitment to intervene on the foreign exchange markets was particularly important.

The dollar was traded in record volume in Tokyo yesterday, finally closing at ¥230.10, down 11.90 compared with Friday (Monday was a holiday here).

It had opened at ¥228.70, sunk to as low as ¥225.20 and then rose to ¥232.60 during a day when trading was worth \$4.75bn (£3.6bn).

Mr Kashiwagi suggested that the dollar would experience a long-term decline, though he would not predict how far it might fall against the yen. He doubted that Japanese monetary policy, already very loose,

would require adjustment. On the fiscal side, similarly, officials discounted major initiatives in Japanese policies.

It has been apparent for some weeks now that an income tax cut in the ¥400-450bn range is likely in the 1986/87 fiscal year.

But this has been brought on more for conventional political reasons—a probable general election next year—than because of international calls for Japan to spur domestic demand.

On Friday, the Government reported that Gross National Product in the April-June period had risen at a rapid real annual rate of 7.9 per cent—a marked improvement on the first quarter.

Officials were encouraged that the domestic sector, long overshadowed by exports, had contributed nearly half the expansion.

After a Cabinet meeting yesterday, Mr Yasuhiro Nakasone, the Prime Minister, who

is to visit Washington next month, reiterated that budgetary policies would have to remain tight, given the large public sector deficit.

But he, and other ministers, welcomed the renewed U.S. commitment to free trade.

However, a note of dissent was injected by the Agriculture Minister, Mr Moriyoichi Sato, who said Japan should not yield to pressure to bring forward from April 1987 cuts in the duty on plywood.

To do so, he said, would set a bad precedent and would be unpopular with the Japanese public.

President Reagan had said the U.S. would set specific deadlines for the opening up of the Japanese, and other markets to U.S. goods and services.

This appears to threaten the measured approach of the three-year "import action" programme, but officials here

Mr Yusuke Kashiwagi

were unclear on what commodities the Administration would focus.

Mr Takao Fujinami, the Chief Cabinet Secretary and a close confidant of Mr Nakasone, said he hoped the Reagan address would bring about a speedy start to the proposed new multilateral trade negotiations.

Taiwan sees itself 'off the hook' over unfair trade

BY ROBERT KING IN TAIPEI

TAIWAN appears to be taking scant notice of President Ronald Reagan's policy statement on trade issued this week, although textile exporters here continue to express alarm over protectionist legislation still pending before the U.S. Congress.

Taipei newspapers paid only slight attention to Mr Reagan's disavowal of protectionist legislation and his determination instead to use other measures to ensure U.S. exporters fairer treatment overseas.

An official at the Government Information Office in Taipei said that the papers and many government officials felt that because Mr Reagan had not

specifically named Taiwan in his speech, his reference to "unfair trading practices abroad" did not apply to this country.

Mr Philip Chen, deputy director of the Taiwan Textile Federation, which oversees quota allocations and exports of textile products, remarked: "people were saying in meetings today that because President Reagan did not put Taiwan's name on it, we're off the hook."

"But they should have remembered that he also talked about counterfeiting—that definitely puts Taiwan on the list." The Taiwan textile industry remained extremely concerned

about the so-called Jenkins Bill recently passed by the House which calls for cuts in textile imports from 12 countries including Taiwan, despite indications that the Bill may not pass the Senate.

He noted that the U.S. textile industry had proposed amending the Bill to cover only Hong Kong, Taiwan and South Korea—the major suppliers of U.S. textile imports.

Other observers feel that Taiwan is not paying enough attention to the issue of fair trade that forms the main thrust of the President's statement.

"The U.S. is not looking to cut down on imports. Instead

free trade is the issue and people in Taiwan and Korea are sticking their heads in the sand," Mr Matthew Smith, Taiwan agent of a major American fashion house, said.

"There's been no fair play on the part of the Taiwan Government to open this market, and if they don't they're going to get hit hard."

Mr Smith and other observers feel that the hard-line legislation proposed in Congress will fail, only to be replaced by penalties such as surcharges on imports from countries whose markets are closed.

"I think Taiwan has got a big problem coming, and they

don't know it," Mr Smith concluded. "I think more legislation is coming and the three big targets will be Taiwan, Japan and Korea."

A statement from Taiwan's foreign trade board praised Mr Reagan's stand on trade as far-sighted. It reiterated Taiwan's commitment to the free trade principle and cited continuing talks over trade liberalisation with the U.S.

It also cited options taken or contemplated to lower or eliminate tariff and non-tariff barriers, and in general to lessen Taiwan's huge trade surplus with the U.S. which last year reached nearly \$11bn (£7.5bn).

Relocation. Clip the coupon and expect an argument.

IF YOU'RE THINKING of relocation you can expect a fair bit of argument.

Which location will be best for the bottom line? Where will your staff be happy to live and work?

Read on and you'll soon realise that Newport has some very important benefits.

But the most powerful arguments for Newport are to be found by returning the coupon or asking your secretary to ring 0633 56906.

WHERE ARE THE PROFITS?

Take the M4 and head west. If you're starting from London it'll take well under two hours to reach the Severn Bridge.

As you cross the bridge something quite remarkable will happen. Within a couple of miles rent, rates and start up costs will drop by around 30%.

Companies like INMOS, Alcan, STC and Plessey Marine didn't get where they are today by failing to recognise benefits like that. They're all doing very nicely in Newport.

A FRESH START

If this were a colour advertisement it would look like a picture postcard. We would not resist the temptation to show you some of the most beautiful countryside in Britain.

It's all within a stone's throw of Newport Town Centre. So it isn't just your company that would be healthier in Newport.

GETTING TO MARKETS

London, Birmingham and the South Coast are all under 2hrs from Newport. The M4 will never be more than 10 minutes away.

We have an enormous variety of industrial sites, but it's not our policy to locate them in remote rural areas.

There are nursery sites for the small businesses, purpose built factory units, green field sites and dockside sites.

For the full story send the coupon to Gareth Isaac or Roger Davies, Borough of Newport, Civic Centre, Newport, Gwent NP94UR or ring 0633-56906. Expect a very powerful argument by return.

The Newport Argument

S. Korea to issue action programme

By Steven B. Butler in Seoul

THE South Korean Government is expected to announce this week a new "action programme" for liberalising foreign access to the nation's merchandise, capital and service markets.

It faces increasing and widespread domestic opposition, however, to the measure opening of the country's market that has already taken place.

The move comes in response to mounting U.S. pressure on South Korea to correct a growing trade imbalance between itself and America that amounted to a surplus in South Korea's favour of \$3.6bn (£2.5bn) last year.

Two weeks ago, President Ronald Reagan singled out South Korea for unfairly excluding foreign insurance companies from its market.

It is unclear if the Government announcement will be an acceleration of plans, or simply an early announcement about the details of broad liberalisation policies already adopted.

The Government will want to avoid creating the impression that it is responding directly to U.S. pressure. Last week, even the Democratic Justice Party, which supports the Government with a majority of seats in the Assembly, called on the Economic Ministers to roll back already-announced plans to open the domestic market.

Delors gives cautious welcome to initiative

BY QUENTIN PEELE IN BRUSSELS

M. JACQUES DELORS, president of the European Commission, yesterday gave a cautious welcome to the U.S. initiative to head off trade protection measures by lowering the value of the dollar, expressing confidence that the European Monetary System (EMS) could take the strain.

He described President Ronald Reagan's pledges to fight "unfair trade practices" as "the least he could do" in the light of the U.S. domestic pressures for greater protectionism.

At the same time, he welcomed the belated recognition by the U.S. of the link between monetary measures on the foreign exchange markets, and trade flows, in the agreement among the five leading industrialised nations to work towards lowering the value of the dollar.

Mr Delors, who, as the immediate previous French Finance Minister has long been a proponent of greater exchange rate intervention, nonetheless expressed caution about the work still to be done to remove disequilibria in the world economy.

Mr Delors said that a fall in the value of the dollar should be successfully absorbed by the EMS, given the experience of the European central bankers in regular co-operation in the exchange markets.

The fear is that speculators could rush from dollars into D-marks, thereby putting the exchange rate mechanism of the EMS, which keeps the European currencies within specific divergence limits, under great strain.

The Commission President said that the latest agreement reached in New York on greater co-ordinated intervention, none the less underlined the need for further development of the EMS on a step-by-step basis.

Mr Delors said that his satisfaction at the action on the dollar was tempered by caution at what remained to be done, both to tackle the U.S. budget deficit, and to deal with the debt problem.

"This situation cannot be consolidated unless the underlying causes are tackled," he said. "If the U.S. continues for another year with the same budget deficit, we will be in a situation which would not be satisfying."

On U.S. trade measures, he stated: "President Reagan's task is not an easy one. I don't believe he could have done less in the present American context."

JUST MARRIED

At the time when economic growth appears to be coming to a standstill and stagnating sales figures are seen as a sign of success, it is good to hear there are still companies around that refuse to be associated with this attitude.

We are ready to prove it - with the powerful partnership DEUTZ MWM. Kückner-Humboldt-Deutz AG has taken a majority interest in the Motoren-Werke Mannheim AG and is now concentrating both companies' activities in medium and big engines at Mannheim.

Our customers are guaranteed international service, highly-trained service personnel and a fast supply of genuine spare parts - anywhere, anytime. Give us a call!

Thus a new symbol is born. DEUTZ MWM stands for years of experience, outstanding engineering and economy propulsion.

The economical ones.

CELLNET'S MOTOROLA CELLULAR SYSTEM IS TESTED, PERFECTED AND PROVEN.

Every telephone, every switch, every single piece of Motorola equipment in Cellnet's vast new cellular system is the product of more than 15 years of cellular telephone research and experience.

You'll appreciate that as soon as you make your first call. The clarity of the transmission is nothing short of remarkable. And you'll appreciate Motorola's experience when you see the thoughtful features of the Motorola telephones, like on-hook dialling, and hands-free talking, while you're driving.

And although others have talked a good deal about hand-held portable cellular telephones, Motorola is the only company that offers one you can buy and use today.

Motorola is not only one of the most experienced companies in the field, it's also the only manufacturer that offers you a broad selection of telephones. There are six Motorola cellular telephones – five for use in cars and commercial vehicles, and one hand-held portable. And they are all available for immediate delivery.

In fact, of all the cellular telephones presently in use in Britain, more are made by Motorola than any other manufacturer.

For more information about Motorola cellular telephones and cellular service for yourself or your company, call Freefone Motorola. Or contact an authorised Motorola dealer.

Motorola is the only company in Britain which provides complete cellular service at all levels. No other source produces all the hardware, software and talkware for complete cellular systems. And that includes monthly telephone service, as well as the upkeep and installation of the actual telephone units.

We offer all this in Britain and one thing more. A dedication to customer service that never expires.

Motorola is a £4.7 billion electronics company doing business on five continents. We number 100 thousand people, and we share a deep dedication to the service of our customers in voice and data communications, computers, semiconductors and components for defence, aerospace, automotive and industrial electronics.

*With a Motorola cellular portable telephone,
you hold the world of business in the palm of your hand.*

MOTOROLA A World Leader in Electronics.

I require worldwide acceptance from my Card. And I get it.

As a Diners Club member, you'll be welcomed in over 150 countries worldwide. That means airlines, car rental offices and hotels—including all the major chains—plus shops and restaurants. And there is no pre-set limit to the amount you can spend. It all makes Diners Club, the world's first international charge card, one card you can always rely on. No wonder discerning travellers like you enjoy the privileges and services of the Diners Club Card.

Key union opposes strike in Liverpool

By Nick Barker

MEMBERS of Nalco, Liverpool's second largest city council union, have voted against strike action in support of demands by the Labour-controlled council for more government aid.

Mr Peter Cresswell, Nalco's city council branch secretary, said that the totals of individual votes cast for and against strike action would not be announced until this morning. But his statement made more unlikely the prospects of an indefinite stoppage by the 30,000 council employees from today, as recommended by the city's joint shop stewards committee (local union officials).

Last night, the committee was meeting to decide whether to continue with the strike in the light of the ballot by Nalco's 8,300 council employees.

The decision was to be taken by the committee's executive, which is dominated by stewards from the General Municipal and Boilermakers Union (GMBU), who have already ignored a recommendation from their regional officials and continued their calls for the strike.

Liverpool council has been approaching financial chaos since, on June 14, Labour councillors voted for a budget of £265m. That would leave a deficit of more than £100m, according to Mr Tony Burn, Labour's finance committee chairman.

Mr Kenneth Baker, the Environment Secretary, has refused to grant an application from Labour councillors to borrow £25m as a way of bridging the budget deficit. On Monday night, Mr Ian Lowes, the joint shop stewards committee's chairman and a GMBU convenor, said the decision on whether to strike would be based on an aggregate of individual votes cast by the unions.

Before the Nalco vote, the GMBU had voted in favour of striking by 4,345 votes to 2,834. The Transport and General Workers' Union had voted 1,000 in favour of striking and 50 against. Members of the construction union Uoat had also voted in favour of striking.

Editorial comment, Page 14

BSC accused of breaching price guidelines

By Ian Rodger

A HOUSE of Commons committee has charged that the state-owned British Steel Corporation (BSC) sold steel on preferential terms to an associate company, Allied Steel and Wire (ASW), for three years in breach of government guidelines.

The charge, contained in a report of the public accounts committee, will add to suspicions in the private sector of the steel industry that BSC has been providing favourable treatment to its newly-formed joint venture companies.

It also raises the question of whether these ventures, known as phoenix companies, can really be considered privatised, as the Government claims.

BSC refused to comment on the report, but Guest Keen and Nettlefolds, BSC's partner in ASW, said it would argue very strongly with the committee's suggestion. GKN also complained that it had not been invited to submit evidence to the committee.

The committee's report was based on an investigation of the two largest phoenix projects by the National Audit Office for the Comptroller and Auditor General.

It found that, as part of the deal between BSC and Guest Keen and Nettlefolds to set up Allied Steel and Wire in 1981, BSC would supply ASW over its first three years of trading with steel billets on a special price formula established to

maintain ASW on a reasonably competitive footing.

The committee concluded that this constituted extra support for ASW and was in contravention of one of the government guidelines established for phoenix companies in 1980.

This states that the ventures, once established, should be free-standing companies without recourse to parent guarantees.

GKN said the price agreement with BSC did not represent a preferential deal. It pointed to an explanation of it in the committee's report which said that the formula recognised that ASW and its competitors could either manufacture or purchase (steel) from other suppliers and that therefore equivalent prices should be offered.

The report argues that the private sector companies such as GKN which have been involved in phoenix deals have done much better out of them than the taxpayers. It is critical of the Department of Trade and Industry for not keeping a close enough eye on the more than £200m of government money that has been invested in steel industry joint ventures.

"We think the department should be much more closely involved in monitoring phoenix operations until their position as free-standing private sector companies has been demonstrated more clearly than at present," it says.

High jobless rate may remain 'indefinitely'

By Max Wilkinson, Economics Correspondent

THE DANGER that unemployment might remain at present high levels indefinitely was highlighted yesterday in a pamphlet from the Employment Institute.

The institute, which was established earlier this year by a wide cross-section of people from politics, the universities and the City of London, has argued for a cautious policy of reticence to cut unemployment.

The pamphlet, called "Governments can affect employment," rebuts the arguments of some members of the Conservative Party that reductionary policies would be ineffective in the long to medium term in stimulating economic demand.

The booklet argues that Mr Nigel Lawson, the Chancellor of the Exchequer, was wrong when he told the Tory Party Conference last year: "Let us be absolutely clear. You will not reduce unemployment by increasing what governments spend or borrow."

Yesterday, Mr Gavin Davies, the pamphlet's author, said there was increasing evidence that the "natural" or Non Accelerating Inflation Rate of Unemployment (NAIRU) had risen as actual unemployment increased.

This reflected evidence that a considerable part of manufacturing capacity had been scrapped during the last recession as well as the erosion of skills among the labour force.

As a result of prolonged unemployment.

As a result, there might indeed be a risk of higher inflation if the Government were to provide a general stimulus to demand in the economy.

Equally, the argument suggested that it would be folly to do nothing, for the consequences of inaction would probably be that a large mass of unemployment would continue indefinitely.

Since many of these unemployed would be outside the central core of the labour force, they would have little effect on wage bargaining and therefore little effect on inflation rates.

Governments can affect unemployment, by Gavin Davies from the Employment Institute, Southbank House, Black Prince Road, London SE7 7J. Annual subscription £10.

Venture capital fund will seek to start blacks in business

THE CITY of London and industry are being asked to support a £300,000 venture capital fund to aid would-be businessmen and women from ethnic minorities, particularly from the Afro-Caribbean section of the community.

The idea for the fund comes from the Paul Bogle Foundation, set up two years ago to advise and train potential business people from the black community.

The foundation, established with the help of money from industry and supported by Camden council in London and government funds, has a full-time staff of four and two part-timers. It is named after a 19th century Jamaican preacher and former slave who was executed after leading a protest for social and economic justice.

It was the idea of Mr Bunny Barnett, a black business consultant, who studied reasons why the Afro-Caribbean community appears less successful at business than some other ethnic minorities or the white majority.

He said it was not a question of there being an inherent inability on the part of the black community, but there was a lack of proven and coherent track record, which led to prejudice. The black community lacked the business support systems which existed, for example, in the Asian community. There was no network of Afro-Caribbean blacks.

Through a mutual business contact, Mr Barnett was introduced to Statham Duff Stoop, the stockbroker, which is trying to raise the money for the investment fund.

Mr Stephen Pospisil, a corporate finance executive at Statham, said there were plenty of charities around but that was not the fund's object. It would be managed on a strictly commercial basis. Any other approach would lead to disaster.

Charles Batchelor on a planned £15m scheme to help the Afro-Caribbean community

The fund needed to establish a track record if it were to be able to return to pension fund managers for more money.

The initial plan was for the Paul Bogle Foundation to set up a £250,000 fund in the form of a Business Expansion Scheme. This would have made contributors eligible for tax relief but restricted types of investment and might have aroused unrealistic expectations of returns from private investors.

The fund would have also had to invest all its money in one tax year and would have locked in investors for five years. The institutions at which the present fund is targeted will be more realistic in their expectations, Mr Pospisil believes.

If the fund achieves its maximum size of £300,000, it aims to invest between £20,000 and £50,000 in about 20 ventures, both start-up businesses and existing companies which need capital to expand.

The idea for the fund arose when Mr Barnett realised many would-be businessmen who came to him for training and advice were unable actually to launch businesses for lack of funds.

Mr Barnett said it might take nine months from conception to realisation of a project and one could not wait another nine months to secure the finance.

He said: "Often blacks get an unreasonable request from their bank manager for collateral that you can only describe as prejudice. This is the result of a perception that black people are not good at business."

MPs urge Britain to stay in Unesco

By Robert Mauthe, Diplomatic Correspondent

THE INFLUENTIAL House of Commons Foreign Affairs Committee yesterday recommended that Britain should remain a member of Unesco, the United Nations Educational, Scientific and Cultural Organisation from which it has threatened to withdraw by the end of 1985 if it is not radically reformed by then.

Sir Geoffrey Howe, the Foreign Secretary, gave formal notice of the UK's intention to withdraw from the organisation in a letter to Mr Amador-Mahtes, UNesco's director-general in December last year. The British move followed a similar decision by the U.S. Administration, which has already left Unesco.

The all-party committee, reached a series of unusually clear and unambiguous conclusions on the subject of Britain's membership.

Its report said that the withdrawal by Britain was likely to have detrimental effects on its relations with other friendly countries, particularly in the Commonwealth, and was likely to advance the interests of the Soviet bloc in the Third World.

"It would preclude continued Western influence in the development of the organisation and would, therefore, be likely to encourage the transfer of effective leadership of Unesco into the hands of the Soviet Union and its allies," the report said.

Moreover, a decision to leave the Organisation would be a breach of the principle of "universality" in the United Nations and its agencies, which could have long-term and damaging consequences for those organisations, and not merely for Unesco alone.

Continued membership of Unesco was "an objective which should be pursued in the interests of British scientific, cultural and educational interests," the committee said, noting at the same time that the UK's contribution to Unesco was more fully appreciated within the organisation than it was in Britain itself.

"Whereas the withdrawal of an irreverent, the withdrawal of the UK would be genuinely regarded as a serious and substantive loss to the organisation, particularly by the UK's Commonwealth allies."

One of the most interesting findings of the committee concerned the role which the U.S. Heritage Foundation, a strong advocate of Reaganite policies, is said to have played in influencing British official and public opinion.

The committee said that Mr Gough Whitlam, former Australian Prime Minister and now Australia's Permanent Ambassador at Unesco, had referred to the Foundation's role in a recent speech.

"We have subsequently received what appears to be firm evidence of the Foundation being involved in campaigns to attack the U.N. and its agencies, and have no reason to doubt Mr Whitlam's allegations of attempts by the Foundation to influence the British press and British opinion leaders."

Du Pont retains chemicals lead

By Tony Jackson

DUPONT OF the U.S. retained its position as the world's biggest chemical company by sales and profits last year, according to the UK-based publication Chemical Insight.

Du Pont also spent more on research and development than any other chemical company. However, the biggest profits increase among leading chemical companies in 1984 came from the U.S. group Dow Chemical, followed by the chemical division of U.S. oil company Exxon. Next came Bayer of West Germany and Britain's ICI.

As in previous years, the three German chemical majors - Bayer, BASF and Hoechst - followed Du Pont in the world sales league in dollar terms, followed by ICI in fifth place. ICI ranked second after Du Pont in net post-tax profit expressed in dollars.

In terms of performance ratings measuring financial strength, Chemical Insight ranks ICI as leader for the second year running. Second comes Ciba-Geigy of Switzerland, replacing U.S. group Monsanto from the previous year's ratings.

Whereas Bayer and ICI had sales increases last year of 20 per cent and over, and the top 10 European companies all achieved sales increases of over 10 per cent, the strength of the U.S. dollar meant that the best-performing U.S. company in sales terms, Exxon Chemical, produced a rise of only 7.5 per cent.

Midshires and TSB link in cheque scheme

By CLIVE WOLMAN

THE FIRST cheque account linking a building society with one of the leading banks was launched yesterday by the Midshires building society and the TSB, the Trustee Savings Bank.

The link-up points to the type of alliances and mergers between banks and building societies that are likely after the stock market flotation of the TSB next February and the change in building-society legislation due to take effect from January 1987.

The Midshires Mastercheque account offers customers free banking for accounts remaining in credit, including the use of cheques, unlimited standing orders and direct debits and the use of a Visa credit card.

Current-account balances in excess of £350 are automatically transferred to a Midshires higher-interest account, which at present pays interest of between 7.75 and 9.25 per cent net of basic rate tax. The interest rates are set at guaranteed differentials above the building society's ordinary share rate of between 0.75 and 2.25 percentage points, depending on the size of the balance.

If the non-interest-paying, current-account balance falls below £100, it is automatically made up to £350 with a transfer from the interest-bearing account.

The only other link-ups between a building society and a clearing bank to offer a similar range of services are those between the Alliance building society and the Bank of Scotland and between the Bristol & West society and Standard Chartered.

CBI backs apartheid reforms

By RICHARD EVANS

THE CONFEDERATION of British Industry (CBI) yesterday reaffirmed its full support for the Government's strategy on South Africa of working for peaceful change through urgent political reforms rather than through the imposition of sanctions.

In a policy statement yesterday, the CBI said: "We are totally opposed to apartheid, which is morally abhorrent and hinders economic growth and free enterprise. We acknowledge that a start has been made on dismantling the system, but we believe it must be abolished altogether as soon as practicable."

The CBI believes, however, that the process of political reform would be retarded rather than assisted by measures which damaged South Africa's economy such as enforced divestment by foreign companies or trade embargoes.

These, it argues, would weaken the beneficial influence of the business community, encourage further polarisation of attitudes, damage prospects for recovery and growth, endanger the livelihood of many non-whites, destabilise the economies of neighbouring black African nations, and could affect employment in the UK.

Risk of 'spilt blood' in City revolution

By Barry Riley in St Heller

A LEADING international banker said yesterday that it was possible that some blood would be spilt in the process of the financial revolution in the City of London.

Mr Harry Taylor, a Briton who rose to become president of Manufacturers Hanover, the leading U.S. bank from which he retired earlier this summer, accused some larger banking groups of treating their investments in City securities firms as "insurance premiums" against the possibility that they would find this new type of business to be worthwhile.

He was speaking at a conference in Jersey on managing risk in financial institutions for the accountancy firm of Deloitte Haskins and Sells, for which he has just become an adviser.

Mr Taylor said international banks had already suffered from an excess of institutional and personal ambition in the promotion of new financing techniques.

He gave a warning: "It seems unduly optimistic not to expect this behavioural pattern to repeat itself in London when the 'Big Bang' comes."

British Airways launched the first stage of its pre-privatisation campaign with advertisements showing its staff as heroes and heroines of a "caring" airline. The Government intends to sell BA to the private sector next year.

The campaign is aimed at frequent business travellers and at the leisure market. The former are seen by BA as "seasoned, sophisticated and often prejudiced against British Airways". The latter is viewed by British Airways as "less discerning and maybe seeking reassurance about safety. That was especially true in the wake of the recent British Airways 737 accident, which killed 55 people, the airline said yesterday.

Britain's finance houses, which make the bulk of instalment loans, are launching a campaign to explain and justify their new National Credit Register, where details of personal borrowers and their repayment record will be kept, David Lascall writes.

Banks without account charges 'winning customers from rivals'

By CLIVE WOLMAN

THE BANKS which impose charges on personal current accounts have been steadily losing customers - including many of their best - to the banks which do not.

Figures released yesterday by National Opinion Polls (NOP), based on an annual survey of 65,000 people, suggest that the switch in the last two years by the Midland and TSB to free banking for accounts kept in credit, has been a highly successful marketing move.

The figures cast doubt on claims by the other major clearing banks, particularly Barclays, that those customers who have moved their accounts have been their least profitable and attractive customers, with low average balances and who come from the lower socio-economic groups.

Of the 1.1m current account holders who switched banks in the year to June, 55 per cent were from the upper socio-economic groups, A, B, and C1, the NOP survey indicates. This compares with a proportion of only 52 per cent of all current account holders from these groups.

A total of 51 per cent of the switchers were aged below 35 years - and thus would have more years in future as bank customers - whereas that age group comprises only 37 per cent of all current account holders.

Figures showing the proportions of customers holding and using credit cards - another criterion of their attractiveness to banks - also indicate that those switching to free banking are likely to be more

profitable to the banks than the average customer. In the year to June 1984, the proportion of current accounts at the charging banks was 85 per cent, the NOP statistics show. But their share of new accounts transferred from other banks was only 59 per cent.

A year later, the market share of the charging banks had fallen to 60 per cent, primarily because of the change to free banking by the Midland and TSB.

Figures collected by NOP suggest that customers who switch in search of free banking are often disappointed. Over the last year, between 35 and 40 per cent of customers with free-if-in-credit banks have had to pay charges at least for one quarter because their accounts moved into the red.

Shell to close bitumen refinery

By Dominic Lawson

SHELL is to cease manufacturing operations at its bitumen refinery at Ardrossan, Ayrshire, on the west coast of Scotland. Its move is a further step in the restructuring of the UK's oil refining industry.

Last year Shell announced the closure of its Teesport refinery in the north-east of England, while in March this year the company said it planned to make 1,000 workers redundant at Stanlow, Cheshire, the largest of its UK refineries.

Last year Shell UK lost about £25m on its oil refining and marketing. Mr Robert Reid, the chairman of Shell UK said yesterday: "Unless we face up to the need for this restructuring, we will never make any money. We are in much better shape now."

Mr Reid said that in Shell's programme of refinery closures "the unions have been first class in facing up to the problems." The Ardrossan refinery, which processes heavy oil from Venezuela into bitumen, employs 65 people. Only 15 workers will be retained. They will be involved in the plant's continuing operations as a storage site for bitumen.

Shell would not reveal yesterday how much it would save by halting refining work at Ardrossan, which has been loss-making for many years. Oil industry analysts thought savings would amount to at least £1m a year, however. Ardrossan's throughput was 100,000 tonnes a year, compared with the total UK bitumen handling market of 1.5m tonnes a year.

© The British Gas Corporation may develop new areas of business activity after it is privatised. Mr Chris Brierley, the corporation's managing director for economic planning, said yesterday. Mr Brierley added that it might not be sensible to continue to impose on the privatised business the statutory duty to meet all reasonable demand for gas in the UK, since British Gas might not in the future be the only company licensed to supply gas in the UK.

RUN-UP TO PRIVATISATION COSTS AIRLINE £120m

British Airways polishes its image

By LYNTON MCLEAN

BRITISH AIRWAYS (BA) has spent more than £120m on improving its image in the run-up to privatisation. That emerged yesterday when Mr Colin Marshall, chief executive of the airline, announced "the most important campaign [BA] had ever mounted."

British Airways launched the first stage of its pre-privatisation campaign with advertisements showing its staff as heroes and heroines of a "caring" airline. The Government intends to sell BA to the private sector next year.

The campaign is aimed at frequent business travellers and at the leisure market. The former are seen by BA as "seasoned, sophisticated and often prejudiced against British Airways". The latter is viewed by British Airways as "less discerning and maybe seeking reassurance about safety. That was especially true in the wake of the recent British Airways 737 accident, which killed 55 people, the airline said yesterday.

The campaign is part of the large exercise by Mr Marshall to overhaul before privatisation what he has described as the "care-worn, rather dated image of an airline that offered an inadequate service to its customers."

He has authorised expenditure of £120m on changing the image of BA in the two and a half years since his appointment.

"This might appear to be a lot of money," he said, surrounded by spotlights in a television studio for the media launch. The airline spent £30m a year on worldwide advertising, a total of about £75m in two and a half years.

In addition, "the total image change programme" had cost £45m, he said. That included aircraft paintwork and the corporate livery of the airline, covering vans, stationery and assorted items, aircraft refurbishment and new uniforms for the staff.

The latest phase of the publicity exercise involves a £5m advertising

campaign, the biggest in the airline's history. It is based on the airline's policy of "putting people first," and started last night with a television commercial.

The advertisements show airline staff flying as "supermen and superwomen" in their efforts to serve passengers. Saatchi & Saatchi Compton, the airline's advertising agency, developed the theme.

Almost no marketing cliché was left unused at yesterday's glittering media launch of the "caring airline" campaign. The campaign is based on the proposition that "you are going to notice a whole fresh attitude, a new warmth and friendliness in British Airways people from now on," the airline said.

Mr Marshall insisted that "putting people first" was not just a marketing slogan. "It represents a state of mind required by all staff in BA." The new attitude towards BA's customers was followed by the need for a new style of management, "then a change of image and a new corporate identity."

Delays in Whitehall 'hindering' microelectronics innovation

By GUY DE JONQUIERES

DIRECT GOVERNMENT support for the use of microelectronics in industry is stimulating commercially successful innovation, according to a report published yesterday. Administrative delays in Whitehall are, however, hindering the effectiveness of such spending. The report is by the independent Policy Studies Institute (PSI) and was commissioned by the Department of Trade and Industry. The DTI administers the £300m-a-year Support for Innovation (SFI) programme which includes support for microelectronics applications.

The report questions government attempts to ensure that grants are restricted to microelectronics projects which would not otherwise have gone ahead. Controls may create more waste than they avoid, it says.

It also criticises the Government for imposing a six-month moratorium on new microelectronics support grants last year. Such freezes, it says, create damage through misunderstanding and loss of confidence which far exceeds any savings they may achieve.

The report is based on a study of the Microelectronics Application Project (MAP) which was launched in 1978 and was superseded by the SFI programme earlier this year. The PSI says direct project aid should be continued and, preferably, expanded.

Its views challenge the Government's decision earlier this year to cut the SFI budget by £10m and to reduce spending on direct project support in favour of programmes to increase industry's general awareness of microelectronic technology.

The PSI finds that companies which have received MAP project grants have been measurably more successful in achieving microelectronics innovation than those which failed to win government support.

More than 80 per cent of projects

RESULTS OF MICROELECTRONICS INNOVATION PROJECTS

	Companies offered MAP grants %	Companies not offered MAP grants %
Project abandoned	11	23
Technical specifications successfully met	82	69
In commercial production	52	33
Commercially successful already	35	19
Significant increase in UK market share	25	14
Significant increase in export sales	27	23
Increases in numbers employed	30	19
Reductions in numbers employed	5	12
Acquisition of in-house expertise	51	46
Useful unexpected gains	28	18
More worthwhile than expected	24	22

Source: PSI

backed by MAP had met their technical specifications, against 69 per cent of projects which did not get aid. More than half the assisted projects were in commercial production and 35 per cent were commercially successful, against a third and 19 per cent respectively for projects excluded from MAP.

Projects supported by MAP also achieved higher domestic and export sales, created more employment and produced more unexpected side benefits than those which did not benefit from the scheme.

Government funding covers up to 25 per cent of the cost to a company of developing a new product or process using microelectronics. So far, more than £200m has been committed to such projects and the average grant has totalled £47,000.

Almost two-thirds of the 1,359 companies offered grants up to April 1984 have been in the electrical, electronic and instrument engineering industries. More than half the companies are located in the south-east of England and 59 per cent employ fewer than 100 people.

Promoting Innovation: Microelectronics Applications Projects. £10. Policy Studies Institute, 100 Park Village East, London NW1 3SR.

Grosvenor challenged in property case

By RAYMOND HUGHES, LAW COURTS CORRESPONDENT, IN STRASBOURG

GROSVENOR ESTATE, London's largest private landlord, was accused yesterday of wanting landlords in wealthy areas to be treated differently than those in poor areas.

Mr Robert Alexander, QC, for the UK Government, told the European Human Rights Court in Strasbourg that Grosvenor Estate, which owns more than 1,000 houses in Belgrave, one of London's wealthiest residential districts, had argued that the 1987 Leasehold Reform Act should be applied only in poorer areas.

The Act entitles tenants with long leases of houses to buy the freeholds of their homes at below market value.

Grosvenor Estate, owned by the estate of the second Duke of Westminster, complains that it has lost £2.5m through enforced sale of 80 of its properties to tenants under the Act. It has asked the court to say that the Government should compensate it for what it argues is a violation of its property rights guaranteed by the European Human Rights Convention.

Mr Michael Beloff, QC, for Grosvenor Estate, described the Act as "a blunderbuss weapon inept for its target."

A comparison of stock index futures.

STOCK INDEX FUTURES CONTRACTS	Initial Deposit*	Maintenance Margin*	Approximate Contract Value**	Avg. Daily Volatility***	Index Basis
Value Line Index Futures	\$6,500	\$2,000	\$98,000	\$1,205	1683 stocks unweighted
Major Market Index Futures	\$1,750	\$500	\$25,000	\$338	20 NYSE Stocks price-weighted
S&P 500 Index Futures	\$6,000	\$2,500	\$92,000	\$1,005	500 stocks capital'n weighted
NYSE Stock Index Futures	\$3,500	\$1,500	\$53,000	\$590	all 1500+ NYSE stocks capital'n weighted

Some people think stock index futures are all alike.

As the chart above demonstrates, there are major differences in the major contracts. And the differences can be important.

For example, the stocks that make up the Value Line Index, and the way the index is calculated, make that contract highly volatile. Many people may find it too speculative for their needs.

By contrast, the contract based on the Major Market Index is stable. That means the daily potential for loss is limited. But so is the daily potential for profit.

The size of the S&P 500 contract makes it popular with large institutional investors. Individuals may prefer something more affordable.

Which brings us to NYSE Stock Index Futures from the New York Futures Exchange. With NYSE Stock Index Futures, the

daily potential is substantial. The volatility is manageable. The cost is affordable. And unlike the others, these contracts are based on the NYSE Composite Index—the only complete measure of activity at the New York Stock Exchange.

All stock index futures involve a certain degree of risk. So they're not for everybody. But we think anybody can see the differences between them.

Because even in black and white, an apple doesn't look like an orange.

Household appliances

Whirlpool streamlines for a new thrust

The American giant is going international. Terry Dodsworth reports

BILL MAROHN is vice president of the kitchen products group at Whirlpool, the U.S. household equipment manufacturer. When he goes on a tour of a plant his correct business suit stands out amidst the overalls. Yet no one seems to notice the difference. As he skirts around the clanking machinery at Findlay, Ohio, trading first names and handshakes, you would think the next door neighbour had dropped in for a chat.

Up to a couple of years ago, Marohn used to be head of production at Findlay, so his familiarity with the people in the plant is no accident. Yet the ease of communication between different ranks in the workforce is not left to chance either. "We have a very extensive communications programme," says Jay van den Berg, division vice president. "We have a newsletter, we send out around 10 letters a year to people at home, and twice a year I hold a meeting with everyone in the plant."

Meticulous shopfloor management is just one element of the technique that has gone into making Whirlpool one of the two largest U.S. companies in its sector, and a powerful candidate to challenge Japanese competitors at home and abroad (see below). Across the range of its activities, the group displays many of the characteristics which are often said to have disappeared from the mid-

western industrial belt in the last decade of crisis—the carefully paternalistic attitude to the workforce, the serious approach to work, and, not least, the deadly competitiveness.

Indeed, the problems that blighted the industrial territory which surrounds Findlay in the area around Lake Erie seem to have largely bypassed the company. Since Whirlpool opened its Findlay plant 18 years ago, it has scarcely had a down year. Output has gone up steadily, investment has grown to around \$80m in total, and the number of jobs has risen from nothing to around 2,000.

The group as a whole has grown in step. At a time of rapid consolidation in the U.S. white goods industry, it has emerged on an equal footing with General Electric at the top of the market.

Whirlpool is believed to have a considerable lead in the washing machine market, with more than a 40 per cent share, leaving GE trailing with 15 to 20 per cent. Maytag and White Consolidated with about 15 per cent each. The company can more or less match GE's 30 per cent slice of the refrigerator business, where White comes a close third with about 25 per cent.

However, it lags in the dishwasher business, where it has about 13 per cent compared with GE's 30 per cent. Second place here is held by Design and Manufacturing, a private company.

Whirlpool has been a cash machine for years—in the last three alone it has carried between \$310m and \$418m of liquid funds in its balance sheet, while its long term debts have never counted for more than \$61m. In 1984 it generated earnings of \$180m compared with \$95m in 1975, from sales that have grown from \$1.3bn to \$3bn.

Indeed, in some ways, Whirlpool's solid virtues have worked against it. According to a recent study of corporate tax avoidance in the U.S., it is one of the

Bill Marohn: handshakes

very few companies to have paid anything close to the statutory 45 per cent rate in the last few years.

Whirlpool has achieved its present dominance by aiming itself squarely at the mainline market of Middle America. It came into being as a supplier to Sears, Roebuck, the world's largest retail chain, a company which, by definition, is one of the most sensitive guides to the needs of the U.S. mass market. Whirlpool's electric washing machines, eventually marketed under its own name as well as Sears', set it on the map in the first half of this century.

Since the 1950s, however, Whirlpool has broadened its base, expanding steadily through acquisitions to give itself a product range encompassing washing machines, dryers, cooking equipment and dishwashers.

A brief flirtation with television manufacturing came to an end when it sold its Arkansas plant to Sanyo of Japan in the mid-1970s, and it has since concentrated on the kitchen. It is currently trying to buy the KitchenAid appliance company from Dart & Kraft, a deal which is being investigated by the anti-trust authorities.

In its drive for growth over the last three decades, Whirlpool developed the reputation of being primarily an aggressive marketing company. But the last

few years have seen a significant shift of emphasis towards strengthening its manufacturing base.

Its 1984 annual report, sub-headed "Assuring the competitive edge," and larded with details of an ambitious five-year expansion plan, underlines the new thinking. It reveals a company which has become keenly aware of a competitive environment in which it will have to ensure that its manufacturing costs are in line with international standards.

The first aspect of the current strategy is a \$600m capital expenditure programme aimed at a sweeping reorganisation of the factories.

Several products, such as commercial ice-makers, have been dropped, and some facilities closed down, but alongside this streamlining, the company is restructuring its plants to consolidate operations which have sometimes been spread around a number of facilities. Findlay, for example, has now taken on all the cooker range production.

The modernisation that has gone alongside this programme is eating up cash—last year the company spent \$134m on new plant and equipment, almost twice the rate of depreciation. But Whirlpool says it was necessary because some plants were operating at high efficiency while others were "under-utilised, too old to be competitive, or otherwise were not well equipped for top-quality, cost-efficient, high-volume production."

It expects to achieve a 15 per cent reduction in manufacturing space, along with a significant reduction in employment and "other direct costs for comparable production levels."

In the company's Clyde plant, for instance, where it makes its washing machines, "we have gone for a whole new product design together with the automated factory approach." The previous washing machine design was 30 years old. The new one is aimed at reducing manufacturing energy costs and scrap, while easing production by an "inside-out" assembly process.

Findlay is an example of an alternative approach, says Marohn, where "we thought we had a product design with which we could be happy. So we decided to automate various aspects of production in a more incremental approach to automation."

One example of the impact of the Findlay methods is the cooker cabinet line, which has been converted from manual to automated production in a move that has reduced labour time by around 70 per cent, increased unit production by 35 per cent an hour, cut scrap costs by more than 75 per cent, and doubled overall productivity as

measured by cabinets produced per employee/hour.

Findlay has also concentrated on trimming the carrying cost of its inventories. On the metal presses, the method of changing over the dies has been modified so that it takes a matter of minutes rather than hours, keeping inventory more strictly in line with demand. A new machine which makes intricate plastic parts from moulds which are changed out automatically is also just coming on stream.

According to Jerry Weinstein, director of manufacturing engineering, the division has measured the total cost of products against the average annual inventory level—in the last five years, "We now turn our inventory about 38 times a year. We were only half that five years ago," he says.

The third element of Whirlpool's competitive drive is to convince the workforce that all these changes are necessary. The investments in automation clearly threaten some types of jobs—indeed, the number of total employees has come down from 27,000 in 1974 to 22,000 last year.

Whirlpool has tackled the challenge of shop floor management with a blend of methods which appears to fall somewhere between a more traditional type of benevolent paternalism and a modern style of participative management.

On the one hand, a great deal of time is spent on developing a kind of "family" atmosphere in the Findlay plant, using birthday parties, special social events, or photographs

and personality stories in the company newspaper.

At the same time, managers are expected to pay a great deal of attention to communications. Supervisors are made responsible for channelling information on a regular daily basis to the people they manage six times a year; they also hold formal meetings on work practices and staffing and van don Berg himself has two sessions a year with everyone in the plant to discuss the state of the business. At present this may be a somewhat top-down approach, but the development of quality circles is beginning to generate more ideas from the shop floor.

Whirlpool's aim is to turn this five-year drive for a stronger competitive base into a \$1bn increase in sales to \$4bn. This will be no mean feat at a time of comparatively low inflation, and the company is likely to rely on acquisitions for a considerable part of the growth.

It is also depending on the steady maturing of the baby boom generation. Over the next five years, these demographic factors are expected to lead to the shipment of 35 per cent more appliances than in the previous five.

If the industry behaves according to plan, and expands at such a rate, it will inevitably act like a magnet to new competitors, particularly to the kind of overseas competition which has wrecked such havoc in other basic U.S. industries. The expectation is why Whirlpool has its new efficiency plan—and why the programme is so important to its future.

Confronting the challenge from Japan and Korea

TUCKED away in Whirlpool's 1984 annual report was a little-noticed reference to an effort to "consolidate existing international activities and explore new ventures." What this means is that the company is looking very closely at both Europe and the Far East for expansion or acquisitions—indeed, it has had teams scouring both areas to assess the various possibilities.

The overseas push is part of Whirlpool's answer to the criticism that the company has continued to flourish because it is in one of the few established sectors of U.S. industry that have not come under serious attack from Japan. It has plants in

Brazil and exports some of its products, but it has limited international experience, and up to now it has been protected at home by a product line—relatively capacious washing machines, dishwashers and cookers—where far eastern competitors have little manufacturing experience in their home markets.

Indeed, in the one area where the Japanese and Koreans have entered the market in a big way—microwave ovens—Whirlpool, like the rest of the U.S. industry, has suffered heavily. Today, far eastern producers control more than half the U.S. microwave market. There are now signs that these overseas

companies, which have begun to take a sizeable chunk of the peripheral markets for small washers and cookers, are preparing to expand into the core sectors controlled by the U.S. groups. The Europeans, too, are intensifying their attack on the U.S. market.

Electrolux, the dynamic Swedish-based group, is already active via Zanussi and its other brands. But the industry at large believes it has considerable consolidation to undertake in Europe before it can be viewed as a major threat in the U.S.

More pressing is the recent entry by Matsushita of Japan. It recently started testing the

water with a full range of major appliances, mostly made in Canada, and bearing the Panasonic brand name. Already the biggest Japanese company in the U.S. market, notching up \$3bn in sales last year, Matsushita is seen as a bellwether for other potential competitors from Japan.

As well as microwave ovens, Sanyo is already building refrigerators in the U.S., and Sharp is exploring the possibilities in other major appliance sectors.

The potential challenge posed by the Far East manufacturers has already led to some adaptation at Whirlpool. In factory management, for example, its new

emphasis on inventory control owes a lot to Japanese practices, which created a higher level of awareness in the company.

Manufacturing abroad may become another element in the group's defensive strategy, partly to hit back in the home market of potential competitors, and partly to establish a clearer understanding of their strengths and weaknesses.

"There is no question that the market is becoming more international," says Whirlpool's Bill Marohn. "More and more when we are developing new products we think about how to make them saleable overseas."

Krupp engineering for excellence

Getting the drift.

The Earth's continents are constantly on the move. Radio telescopes are monitoring their drift. Thanks to the extraordinary precision with which Krupp builds such special antennas measurement variations are kept to a minimal 7 mm over 1,000 km².

Trained on fixed stars to an accuracy of one thousandth of a degree they provide vital information on continental drift and seismic activity in earthquake zones.

Sited 400 km north of the Arctic Circle at Tromsø in Norway is ESCAT, a

Geodetic surveying using Krupp-built antennas.

special antenna used for investigating polar light and the sun's influence on the seasons.

Some 4,000 km further south, on a mountain top in Spain's Sierra Nevada, a 30-m antenna picks up signals from the Milky Way.

At Usingen near Frankfurt, the West German PTT, Deutsche Bundespost, operates an earth station featuring two 140-tonne parabolic antennas for worldwide TV transmissions. Krupp played a significant role in these antenna projects.

Krupp antenna engineering lends a hand in many other areas too. For example, in the search for and exploration of mineral deposits, in pollution control and in command stations for spacecraft.

Creative dialogue is our springboard. Krupp engineers work in close partnership with customers seeking solutions to the problems that touch us all.

We provide the advanced engineering materials, facilities and systems needed for speedy and sustained economic progress.

Krupp. A tradition of progress.

 KRUPP

THE ARTS

Television/Christopher Dunkley

Praise be the duopoly

Is British broadcasting working "superlatively well"? John Mortimer, QC, television script-writer and inventor of *Rumpole*, thinks so. Is the BBC "one of the great institutions of the Western world"? Sir Huw Wheldon, OBE, MC, former director of BBC Television, says so. Does the quality of broadcasting in Britain "remain extremely high"? According to the minister responsible for broadcasting, the Rt Hon Douglas Hurd, CBE, MP, it does. Is the BBC "that most marvellous specimen of this species"? So says Les Brown, editor-in-chief of the American magazine *Channels of Communication*.

By the last day of the Royal Television Society Convention in Cambridge last week, so many compliments had been showered upon British broadcasters, so much flattery poured on their heads — mainly by British broadcasters themselves, though with contributions from a handful of anglophile Americans — that one began to wonder why they did not have done with it and simply declare themselves perfect.

Having noted an attitude bordering on contempt for popular television at last month's Edinburgh International Television Festival, I was interested to find a subtly contrasting atmosphere at Cambridge. Disdain for mass tastes was as strong as ever. In the televised debate at the Cambridge Union on the first night Paul Johnson spoke for the motion "That this house

"It was rather like a comedian getting cheap laughs at a weekend house party by telling jokes about Gasworks Terrace"

believes the BBC should accept advertising on content for largely out of a spiteful dislike for the Corporation — and his opponent, John Mortimer, declared with brio: "Mr Johnson is really calling to you in the dulcet tones of Mr Leslie Crowthart (presenter of *The Price Is Right*) to 'Come on down!' Come on down to the Teasmade and the Carmen Rollers." The supercilious deliberation which Mr Mortimer loaded on to those brand names won an approving roar of scornful laughter from television's assembled bigwigs; it was rather like a comedian getting cheap laughs from a weekend house

party by telling gags about Gasworks Terrace. The keynote of the convention was complacency. Again and again we heard that mock modest phrase "Britain has the least worst television in the world," a claim which sounded increasingly odd as the results trickled back from the Prix Italia, Europe's leading broadcasting festival, revealing that the top television prizes had all been won by other countries. That alone is not, of course, a condemnation of British television. By world standards the broad spectrum of our television actually is unusually impressive, a fact which has frequently been acknowledged in this column.

But it is one thing for an outsider to express admiration and another thing for the television people themselves to produce such a chorus of self-adulation. Could there be rather more to it than met the eye? Indeed there could. Edinburgh is traditionally the stamping ground for young producers and independents whereas the Cambridge Convention, organised by the RTS, a body started in 1927 by engineers, has become the main event for the grandees of BBC and ITV. King's College Hall is turned into the world's most classy canteen for the duration, and you are less likely to find your self rubbing shoulders with a research assistant or a producer than with a managing director or a programme controller.

The hubris emanating last week from these top men was surely an over-reaction to having just lived through one of the most troubled periods in the history of British broadcasting. The BBC's fight for the licence fee, ITV's suddenly reduced advertising income, the *Real Lives* row, the MIS revelations and above all the appointment of the Peacock Committee to consider the proposal that the BBC should take advertising. This idea frightens the moguls of ITV, who would lose their monopoly, just as much as it appals the gentlemen of the BBC who would lose their amateur status. Nor is that their only worry.

Though mutual admiration was certainly the main occupation, events did include one or two significant indications of the way a wind of change is beginning to gust through television which could blow away the duopoly. One session was devoted to a videotaped interview with Rupert Murdoch who not only called for the privatisation of BBC but also re-

marked that no matter what the British authorities might try to do to maintain regulation of television, technology would run ahead of them.

On the same day Mr Murdoch announced a new link between his own News International company and Groupe Bruxelles Lambert, main shareholders in Radio Télé Luxembourg. Together they will investigate both terrestrial and satellite broadcasting, one idea being an English language service beamed direct into British homes from a French satellite. On the previous day we had heard the surprise announcement that the Irish government had approved a £300m project for a satellite broadcasting system with a footprint stretching from the eastern seaboard of the U.S. to Western Europe. This, it seems, might also offer British viewers satellite services before any British satellite goes into operation. There was speculation, too, about the precise date when American Fed Turner will start beaming his 24-hour satellite service into Britain: soon was the unanimous belief.

Despite all this the tone of self-satisfaction scarcely varied. As events proceeded it became distressingly clear that the members of the duopoly are entirely confident of their ability and divine right to decide what's best for British viewers and give it to them. An excellent "hypothetical" about terrorism and television organised by Granada producer Brian Lapping, who has frequently produced such "fat pretend" exercises, only reinforced, using the people who would actually be involved in a real crisis, it was enlightening and horrifying to discover the readiness of British television to abandon the independence of the fourth estate when the going got rough and "Phone Charles" for instructions, whether Charles was in the government or in Whitehall.

Only one man repeatedly voiced on television's behalf today's version of the belief expressed by Times editor John Deane who said in 1951: "The Press lives by disclosures." The duty of the reporter to pursue the public's right to know was championed solely by Paul Friedman, representative of America's ABC network news. He was as incredulous as I was when one BBC representative actually agreed to a police request to pose as one of them.

The belief that the present nannies of British broadcasting know best and that disaster would ensue if we were allowed to go down to the end of the town without them — if choice in television were as free as in newspapers or books or live entertainment — emerged most dramatically from the session called "The U.S. View: While Americans Les Brown and Robert MacNeil heaped more praise on Britain's duopoly, Charles Bonan of America's Turner Broadcasting read out the choices on British television between 8.00 and 9.00 that night (*Dynasty* on BBC1, local current affairs and *Gardeners' World* on BBC2, a sitcom and

"In the end I realised that when a British broadcaster talks about 'choice' he means 'choice among the sort of things I like'..."

An American game show on ITV, *What the Papers Say* and *A Week in the Country* on CA) and the 26 choices in an American city including documentaries, sport, news, movies, and a book programme.

Again and again that comparison was used subsequently as "proof" that "more means worse" even though it clearly indicated a far wider choice for American viewers. In the end I realised that when a British broadcaster talks about "choice" he actually means "choice among the sort of things that I like: single plays, current affairs and opera." Show him a list including *I Love Lucy*, five popular movies, sport and rock music and he will sneeringly dismiss it as "no choice."

In the end the whole affair was a bit of a farce. A couple of landed aristocrats polishing a pair of vintage Rolls-Royces. "How are we going to get the peasants to pay to come to our beautiful cars?" muses one. "I think I'll levy a postage then they can ride about whenever they like — provided they go where I'm going."

"I'll put a tax on everything in the company store," says the second. "Then they won't even ride there. They'll have to go where I'm going."

What neither old gentleman notices is that they are being watched from the shadows by the peasants sitting in their own Ford Escorts.

The Murderers/Cottesloe

Michael Coveney

"We've felt crippled since the Cottesloe closure," said Sir Peter Hall at the below-mentioned ceremony. He then cut the red tape, diplomatically slapped both the GLC and Lord Cottesloe on the back and we all barked back into the little black box which had turned out to be a thoroughly gripping, scrupulously well presented and low-key provocative new play by Daniel Mornin set in East Belfast in the early 1970s.

Allison Chitty's design of beer crate building blocks, ominously projected unchanging dates of 1969 and 1972 and overblown silk screen monarchist pound note icon is the perfect setting for a Protestant drinking club in which the politically vacillating Tommy (Ewan Stewart), newly returned from across the water, seeks revenge, or at least explanation, for his father's murder.

Unfashionably, the piece is restricted to the Ulster loyalist social background, with fired-off insults against the IRA Republicans and a sort of inverted O'Casey glee in its stage evocation of a comically inter-related but confusedly motivated community. The hardline activist Sam (Patrick Drury) laments the fact that they are losing the province not to the IRA but to Westminster. This remains a

political distinction little understood by many of us in England, and it is given eloquent dramatic exposition.

The wrong man is dragged in and subjected by the gang to a most gruesomely violent but brilliant stripped naked old Put (Michael O'Hagan) has his face smashed by a glass, his ribs stuck by a knife, his abdomen kicked by a chorus of pounding feet. Not a pretty sight. The interval: then, unexpectedly, even more evidence of atrocity in the same direction.

While Peter Gill's production may not amount to a family show, it certainly takes hold as a convincing unreported scenario leading to the suspension of Stormont in 1972. I went to Ulster to stay British, because British is best" is one apostrophised line, and the challenge in many ways of the play is to our easy assumption that British nationalism is rooted in republican dissent. The play is thus genuinely controversial, and ends on a classically lyrical Gill stanza with a committed "Prod" (Lorcan Croft) arguing the long-term issues with the inextinguishable Tommy.

It is all done with admirable sensitivity even if I did find Ewan Stewart distinctly under-expressive in the main role. Andrew Byatt

Michael O'Hagan

and Daniel Webb provide not only interesting and well-observed performance in a play that is fascinating, subversive and, most important of all, on the side of illumination through

freshly dramatised experience. The Cottesloe is back in business with, you might say, a vengeance, and Peter Gill renewed as a creative director. Not before time.

Sir Peter regains a limb

A grant of £375,000 from the GLC has enabled the National to open the Cottesloe again for another six months, but its future is far from secure. Everything depends upon the level of the subsidy the National receives from the Arts Council in 1986-87. It needs to rise appreciably, for 1986-87 the last year in which the National gets aid from the GLC—£788,000 on top of the special grant for the Cottesloe.

The National should know its fate by December, but there is no indication that the new Minister for the Arts Mr Richard Luce, will be able to produce enough extra cash to make good the loss of the Metropolitan Council, like the GLC, which has promised an increase in basic support in line with inflation.

The first guess from the Arts Council suggests a marginal 2 per cent or so rise in the general subsidy, and a sum to make good the loss of the Metropolitan Council will be higher than the original £16m promised by the Government but far less than the £34m the Arts Council has requested.

So Monday's celebration could be the last at the National for some time. Sir Peter was full of good news. Attendances at the Olivier and the Lyttelton during the summer had been the best in the theatre's history — well over 90 per cent — and there had been a good return from the West End transfer of *Guys and Dolls*. The transfer of *The Mystery*, the last production at the Cottesloe before its closure, had made a profit of £100,000 in box office revenue.

success, but had not produced any extra income. The Cottesloe is opening with a nine-week season of the workshop. The first *The Murderers* by Daniel Mornin, is reviewed here. The next production, after the burst of new works, is *The Cherry Orchard*, which comes out of the McKellen/Petherbridge actors group.

The National is pushing harder to gain more commercial sponsorship to make good the loss of GLC aid, but even its successes here, its better box office (which brings in around half of its income) and its profitable transfers, can never make good its need for subsidy. Next year's crisis could make 1985 look like a gnat's bite.

Antony Thorncroft

New York City Ballet/Taormina

Freda Pitt

Those wishing to catch the New York City Ballet in Europe this summer had to go either to one of two Spanish seaside resorts or to Taormina, where the arts festival closed in early September with two performances by the group of 18 dancers which attracted the largest audiences of the music and dance section.

Despite the disappointment of the reduction in numbers, the dancers brought a brand of all-out dancing that provided a heart-lifting conclusion to the whole festival. The two programmes—of which I saw the first and a run-through of both—were skilfully constructed to show the many facets of Balanchine's work from the daring and austere of *Agon* to the dippy entertainment of *Who Cares?* by way of the grandeur of the *Nutcracker* grand pas de deux (without variations) and the grand Tchaikovsky of *Allegro Brillante*, which opened the first, all-Balanchine programme. The second programme included Peter Martins' *Colchis Light Night*, danced by Heather Watts and Jack Soto. These were two of the three principals appearing at Taormina, where 30 dancers had originally been announced, under the personal management of Peter Martins. In the end, Martins preferred to stay at home, the family being

represented by his son, Niles, a promisingly bouncy corps de ballet. Heather Watts has grown in stature as an artist in the last few years. She has the necessary openness and pliancy of movement for the hair-raising complexity of the *Fabrics pas de deux*, the presence and precision for *Nutcracker* and the throw-away charm for *Who Cares?* Sean Lavery, too, who partnered Watts in *Nutcracker*, and the Cornish ballet, who looks at his peak as dancer and artist. Even at the rehearsal, it was evident that Martins' mantle had fallen on his Apollo. Greek gods look at home on the ancient Taormina stage, so *Apollo* (still in its truncated form) carried a particular authority there.

It is 20 years since the company (then in full) came to Italy. In the meantime, the complex of Balanchine has held the field, so part of the audience found it as difficult to adjust to the genuine article as someone who habitually drinks coffee substitutes does when faced with the real thing. Also, American showbiz is looked on with a mixture of the Italian intelligentsia, with the result that *Who Cares?* received little applause from the front rows, although the dancers were at their most engagingly high-spirited in it, from the opening

Bidin's my time for five young men to the fireworks-for-all of *The Cornish*. Malinda Rex's serene and beautifully stylish *I'll Build a Staircase to Paradise* stays in the mind, as also Watts and Lavery in the intense *The Mon I Love pas de deux* and the loose-limbed ease of Leslie Roy and Peter Frame in *Embraceable You*. Frame also performed *Wonderful*, with jaunty Stacy Caddell, this is the right title for Frame, who always looks as if he is thoroughly enjoying dancing, even when, as in *Agon*, his all-American sunny smile has to be banished.

While 13 dancers represent a bare remnant of New York City Ballet, eight dancers constitute the whole of Murray Louis's company, which appeared a week earlier. They nevertheless commanded the Taormina stage without difficulty. Louis is much in demand on the Continent: his *Schubert*, in which the choreography matches the "Trout" Quintet without subservience, is going into the Paris Opera Ballet repertoire next year, and an Italian tour is on the horizon. Enterprisingly, the Taormina Festival commissioned a new work for him, *The Station*, to Kurt Weill music from *Die Dreigroschenoper* and *Die Schatzkammer*, turned out a tellingly dramatic piece, with a group of

would-be travellers at a German railway station between the two convincingly representing a line of decadence, uncertainty and danger. While the choreography and its unexceptionable interpretation lay at the centre of the 30-minute work, considerable assistance was afforded by Frank Garcia's costumes and Lance Renshaw's brilliantly inventive lighting, which audaciously projected the grim outlines of the station's structure to the august ruins of the theatre. At the end of the work, the long-awaited train is heard whistling through the station without stopping. A dark work, then.

After a two earlier piano recitals, live music arrived at the Graeco Roman Theatre with the National Symphony Orchestra of Washington, which opened at Taormina its European tour with Mstislav Rostropovich. London and Dublin will follow. At the Taormina press conference Rostropovich told a nice story about Prokofiev and a misunderstanding with Lavrovsky over the orchestration of *Romeo and Juliet*. His thrilling account of the Death of Tybalt from that ballet, given as an encore after the second concert, is all too unlikely to be equalled at ballet performances.

Dejanice/Lucca

William Weaver

The composer Alfredo Catalani was a near-contemporary of Puccini, but he began his career more rapidly, and thus when Puccini was still a student at the Milan Conservatory, Catalani's *Dejanice*—the composer's third opera—was being performed at La Scala. To Catalani's dismay, his younger colleague (like Catalani, a native of the city of Lucca) soon caught up and in the space of a decade, Puccini's towering gifts, his immense successes, had virtually wiped Catalani off the musical map.

Shy, sickly (he died in 1893, aged 39), Catalani during his lifetime and after his death always had loyal friends and supporters. Puccini, in the lead. And his music—when we are able to bear it—is always enjoyable, usually tasteful, well-made. Its only fault is that it lacks real distinction; it is good, but not great. Despite the efforts of his fans, Catalani seems doomed to remain a footnote in the history of Italian opera, while Puccini—whom he

came to dislike intensely—is a whole, glorious chapter.

Lucca, their joint birthplace, has always had a special partiality for Catalani, the undisputed city long-bored a grudge against its most famous musical son. The anxious was returned, and once Puccini left Lucca (with a friend's wife), he never lived there again. The programme of the brief autumn opera season at the lovely little neo-classical Teatro del Giglio naturally includes a Puccini opera, *Tosca*; but the gala opening earlier this month was a revival of *Dejanice*, missing from Italian opera-houses for over half a century.

A live hearing of the piece is not going to reverse the verdict of history. Writing to his mother, the 25-year-old Puccini reported, "people aren't very excited about it. But I say that, artistically speaking, it's a beautiful thing..." I think this is a fair report on the Lucca reception. It was impossible not to enjoy some of the colourful, pseudo-Oriental music

(the story is set in Syracuse in the 4th century BC) especially for the dances. But Catalani was not a great inventor of tunes; the orchestra is flexible, but the brass—prominent in Catalani's orchestration—was not always up to the assignment. Jan Latham Koenig showed with his conducting of Puccini's *Edgar* at Montepulciano two years ago his feeling for music of the period, and he led a totally convinced performance; things moved at the right pace; obviously he drew the best from all of his forces.

Aldo Trionfo's staging was, for the most part, idiomatic. The dances here a problem, and it cannot be said that the choreographer Anna Maria Vitelli really solved it, nor were Giorgio Pannini's costumes a help. Why should the heroine be dressed as if for *My Fair Lady* while everyone else was wearing more or less conventional BC-Greek costume? Pannini's sets were more successful; and all in all, the production was pleasant to look at as it was pleasant to hear.

Associati) was numerous and vigorous. The newly-formed orchestra of the Teatro del Giglio, used also for symphonic concerts, is flexible, but the brass—prominent in Catalani's orchestration—was not always up to the assignment. Jan Latham Koenig showed with his conducting of Puccini's *Edgar* at Montepulciano two years ago his feeling for music of the period, and he led a totally convinced performance; things moved at the right pace; obviously he drew the best from all of his forces.

Sept 20-26

Theatre

NETHERLANDS

Amsterdam, Carré Theatre: *Ik Jan Cruys*, a new comic opera, charting the anonymous exploits and general hell-raising of the Dutch *enjoy* terrible of the 1600s. Directed by Frans Marjolein from a script by Lemart Niigh and Louis Ferrou, with score by Gerard Stellard and Peter Tuinman in the title role (Tue to Thur). (225 225).

NEW YORK

As Is (Lyceum): The first play about AIDS makes gestures toward the whole community the disease affects and focuses effectively on the victim and his protective lover; but this Circle Rep production also has distracting artistic touches to patch over the play's lack of development once the disease is diagnosed. (239 8200).

I'm Not Rappaport (American Place): A better title might have been Mensch on a Bench for Herb Gardner's touching, funny and invigorating play about two oldsters embodied in Judd Hirsch and Chaevon Little who almost conquer the world when they think they are just kidding with each other. (869 4731).

Cats (Winter Garden): Still a sell-out, Trevor Nunn's production of T. S. Eliot's children's poetry set to trendy music is visually startling and choreographically false, but classic

only in the sense of a rather staid and overblown idea of theatricality. (239 8222).

42nd Street (Majestic): An immediate celebration of the heyday of Broadway in the 30s interpreted as a musical on the film *42nd Street* with the appropriate brass and leggy hooching by a large chorus line. (971 9020).

Brighton Beach Memoirs (46th St): The first instalment of Neil Simon's mix of memories and jokes focuses on a Depression-era Jewish house, held where young Eugene falls awkwardly in love with his cousin. (221 1211).

A Chorus Line (Shubert): The longest-running musical ever in America has not only survived Joseph Papp's Public Theater for eight years but also updated the musical genre with its backstage story in which the songs are used as auditions rather than emotions. (239 8280).

Sunday in the Park with George (Booth): Inspired by the Seurat paintings, Stephen Sondheim's musical with dots and dashes of song that and too soon but work well with Tony Stripling's pretty set and James Lapine's book which changes every scene in the second act. (239 8282).

La Cage aux Folles (Palais): With some tawdry Jerry Herman songs, Harvey Fierstein's adaptation of the French film manages, barely, to capture the feel of the sweet and hilarious original between high-kicking

and gaudy chorus numbers. (737 2823).

WASHINGTON

Count of Monte Cristo (Eisenhower): The second production of Peter Selz's new American National Theatre company is the James O'Neill version of this swashbuckler. (254 3670).

LONDON

Sweet Bird of Youth (Haymarket): Lauren Bacall elegantly decadent as Tennessee Williams's doomed movie queen, Harold Pinter's direction and Ellen Dis's evocative designs contradict the play's lapsed reputation and plans the central tension between the star and her gigolo (Michael Beck) against a detailed canvas of small town Southern vengefulness by the sea (930 9632).

Noises Off (Savoy): The funniest play for years in London, now with an improved set, Michael Rink's brilliant direction of backstage shenanigans on tour with a third-rate farce is a key factor. (936 8886).

Starlight Express (Apollo Victoria): Andrew Lloyd Webber's roller-skating folly has 10 minutes of Spelberg movie magic, an exciting first half and a swindling reliance on indiscriminate rushing around. Disenchanting, Star Wars and Cats are all influences. Patchwork score nods towards rock, country and hot gospel. No child is known to have asked for his money back. (934 8154).

42nd Street (Drury Lane): No British equivalent has been found for New York's Jerry Orbach, but David Merrick's top-dancing extravaganza has been rapturously received. American Place has a new find as Peggy Sawyer, and Margaret Courtenay has a field day (836 8106).

Me and My Girl (Adelphi): Sleek, efficient and enjoyable revival of British's biggest war-time musical hit with Robert Lindsay in the Lepino Lane role emerging as the best new musical star since Michael Crawford. (836 7611).

The Government Inspector (Olivier): Sticking the unfunny revival with under-equipped TV comic Rik Mayall playing the pious as a shrieking nose-picker, Richard Eyre's production for the NT lacks either comic tension or true delirium but, with John Guter's imposing design of bureaucratic bunnies, the show has a sort of monumental stinkiness as well as nightmarish bedlam. New production by Adrian Mitchell. Last perfs Sept 30, Oct 1. (928 2232).

Barnum (Victoria Palace): Michael Crawford returns to London with his breathtaking performance as the dubious impresario, adding one or two new tricks in a likeable marriage of a musical. (834 1317, credit cards 884 9735).

Jumpers (Aldwych): Confident almost sober revival of Tom Stoppard's glittering comedy of love, murder and linguistic mayhem among the logical postivists, with Paul Eddington as a neurotic George Moore II, then was Michael Hordern, Polity Kendall delightful as his retired mu-

sical comedy wife. Peter Wood directs. (836 6504, credit cards 874 6233).

Breaking the Silence (Mermaid): Another RSC transfer, of Stephen Polakoff's account of his family's emigration from post-Revolutionary Russia. Alan Howard succeeding Daniel Massey alongside Jenny Agutter. Ingeniously set in an Imperial railway carriage. (236 5508).

Pravda (Olivier): Entertaining new play by David Hare and Howard Brenton for the National Theatre, Louis is much in demand on the Continent: his *Schubert*, in which the choreography matches the "Trout" Quintet without subservience, is going into the Paris Opera Ballet repertoire next year, and an Italian tour is on the horizon. Enterprisingly, the Taormina Festival commissioned a new work for him, *The Station*, to Kurt Weill music from *Die Dreigroschenoper* and *Die Schatzkammer*, turned out a tellingly dramatic piece, with a group of

the *Mysteries* (Lyceum): The theatre of Henry Irving and Joe Loss restored for theatrical performance after 48 years. Bill Ryden's NT production in three parts is not to be missed, one of the great events of recent years. All three shows played on Saturdays for this limited run. (973 9355).

Guys and Dolls (Prince of Wales): The 1958 National Theatre production has arrived in the West End, if anything improved by the new casting of Lulu as Miss Adelaide and the notably well sung black Sky Master production and John Guter's affectionately lavish designs complement the music. (834 1317, credit cards 884 9735).

Christie's opened its autumn season in its King Street saleroom yesterday with an English silver auction which totalled £154,018. But it was 16 per cent unsold, a high figure for a silver sale. London dealers were the

Saleroom/Antony Thorncroft

Littlecote armour deal

The Armouries at the Tower of London and Mr Peter de Savary have reached a deal whereby the collection of Cromwellian armour at Littlecote, the Berkshire house recently acquired by Mr de Savary will be preserved for the nation.

Mr de Savary will adjust downwards the price he is asking for Littlecote if the potential buyer agrees that the armour remains in the place it has held for over three centuries. If there is no purchaser for the house, the armour will form the basis of an appeal by the Armouries from October 1, at a very reasonable price: in the region of £500,000.

Whatever happens it is unlikely that the planned Sothby's auction of the armour, on November 20-22, will go ahead, and the Armouries in the Tower will make an effort, with Mr de Savary's approval, to acquire the armour for the nation even if a buyer comes forward for Littlecote and its contents.

Christie's opened its autumn season in its King Street saleroom yesterday with an English silver auction which totalled £154,018. But it was 16 per cent unsold, a high figure for a silver sale. London dealers were the

main buyers, obviously stocking up after a good summer selling to foreign visitors. Kopman paid £3,100, double the top estimate, for a George III silver gilt tea and coffee service made in 1800 by Samuel Hannell, and £4,320 for four George III boat-shaped two-handled sauce tureens and covers by John Fries, 1798.

Partridge bought a George II silver gilt two handed cup and cover, made in 1738 by Benjamin Godfrey, for £7,020 (also well above forecast). It carries the arms of Baron Annesley, the 6th Earl of Anglesey, who is remembered as "a man very regular in devotion" but "his devotion to the fair sex certainly equalled if it did not surpass his spiritual devotion." He was probably a bigamist.

Another dealer, Silverman, paid £4,336 for a large Victorian Albany pattern table service, and Simons acquired a pair of oval metal dishes for £4,014.

In the first session of a four part book sale six maps by Abraham Ortelius, Antwerp 1587, made £1,780 and 78 lithographed costume plates of the inhabitants of South America, around 1850, realised £1,555. Charles Empson's "Narratives of South America," 1836, with 16 plates, went for £1,540.

Why the IMF is unpopular

THE policeman's lot, as W. S. Gilbert explained in song, is not a happy one; and the International Monetary Fund, which is the nearest thing we have to a world financial policeman, has in the past been fairly resigned to this fact. Indeed, its officials pretty convincingly make a virtue of unpopularity; beleaguered governments in debtor countries are thought to find it easier to take necessary but unpopular measures if they can blame the fund. Nevertheless, there is a note of quiet desperation in several passages in the fund's current annual report, published today. The fund is only too aware that some potential clients, especially in Latin America, are increasingly tempted to defy it in order to sustain popular support at home.

The report does its best, unusually, to stress the fund's benevolence, discussing economic welfare as well as rectitude, and lobbying for more. It seems unlikely that these reminders will deflect any of the hostile rhetoric to be expected a time around in Seoul two weeks from now; the world situation is getting more difficult for debtors as the U.S. economy slows down, despite all the efforts which the funds has orchestrated in the last three years, and tolerance is wearing thin. It still seems highly unlikely that any client country will actually walk out of the organisation, or unilaterally renounce its obligations in the immediate future, but that danger will certainly grow if the meeting produces a hint of the kind of progress the fund want. This includes better balanced policies in the developed world, the removal of protectionist threats against the poorer countries as well as outright aid for the poorest, and enlarged capital for the World Bank.

Deflationist

These are all admirable aims; but unfortunately the fund has much less power to achieve them than it has to impose its usual, unpopular, litany of adjustment policies on the poorer debtors. This deflationist bias, of which the fund has been accused again and again down the years, is a natural con-

sequence of its role; countries in need of balance of payments assistance are those which have been spending too lavishly, and in spite of all the grumbling, the adjustment is normally much less painful with fund assistance than it would be without it. Conditions, however, are not at present normal. As the report forcefully points out, the cost of debt throughout the world is currently being inflated by the vast credit demands of the world's strongest economy, the U.S. America is one debtor which the fund seems powerless to influence; hence the IMF is increasingly seen at the moment not as a debt collector for western and predominantly American banks. Since debt service burdens, at current levels of debt and real interest rates, are so large, many debtors now begin to suspect that it would be less painful to be cut off from new capital—not available at the moment—than to go on paying.

Dangers

This is a potentially dangerous situation, and it is a pity that the fund's bureaucratic language and inhibitions tend to muffle the warnings that are evident in its reports. Its regular consultations, under Article IV, with all its members, which are described in an admirably lucid and constructive section, could provide the framework for much better co-ordinated policies in all the major economies, giving proper weight to the impact of policies on other countries and on world trade as a whole.

The fund naturally tries to achieve this kind of progress through quiet diplomacy, as does the OECD in its smaller sphere of influence. Bodies which depend on finance from member governments and a flow of confidential information are virtually bound to behave in this way. But when the imbalances in policy are as extensive as in the lines of its report, the dangers are great. It is tempting to suggest that the fund could hardly lose influence with the strong countries, and might gain a more patient hearing among the weaker if it would thump its pulp a bit harder.

The Militants of Liverpool

LIVERPOOL, Britain's fifth largest city with a population of just over half a million people, is in deep decline. The city has more than its fair share of Britain's urban problems—dereliction, rapidly shrinking manufacturing industries, large-scale unemployment, decayed housing.

On top of all that its citizens are facing a form of local government which its proponents see as Trotskyist in inspiration. It is leading to a crisis which could bring the entire city and its services to a halt. If the council pushes on with its present strategy it will run out of cash within days.

Schools will close, garbage will not be collected and those people most in need of the council's care—the old, the disabled—could ultimately be abandoned by councillors remitting on their statutory responsibility to look after them.

Since Labour won control of the city in 1983 a small group of left-wingers, mainly Militant Tendency supporters, who hold the key positions of power, have been engineering a crisis. Confrontation with the Government is the policy to which every thing else including the welfare of their citizens appears to be secondary.

Problems

The strategy has been to set an illegal deficit budget and then blame the shortfall of cash on the Government by saying that Liverpool's ills are the result of cuts in grant and penalties for overspending. This year Liverpool set a budget of £26m, which was perfectly free to do, but then deliberately and illegally levied a rate too low to cover expenditure, leaving an unlawful net deficit of around £100m.

Now, barely half way through the financial year the money is about to run out, leaving no wages for 33,000 council employees and services will quickly stop. The current state of sympathy strike ballots by council unions are not strictly relevant; whether the unions strike or not Liverpool is about to run out of cash unless it alters course or the Government gives in and ships sacks of Danegeld up the Mersey.

In the welter of claim and counter-claim, two facts stand out. Whatever problems arise, they are the problem of the elected councillors of Liverpool who, once elected, have both a civic and a statutory obligation to serve the interests of all their citizens. Second, the financial crisis has persisted for not a second longer than the city's Labour leaders desire.

There are several ways to solve the problem, all known to the councillors and their financial officers, who need only to be given the nod to engage in legitimate financial management or to make changes to the structure of the capital programme.

It is important that the people of Liverpool understand clearly that solutions exist and the power to implement them rests—rightly—in the hands of the council leaders.

However, if Liverpool's leaders are determined to abdicate all responsibility for their city, there will come a time when the Government may have to take action to protect the health and safety of the population. This needs to be intervention of last resort and should be confined to specific responses to specific emergencies.

What is not required is dramatic government intervention, such as emergency legislation to put commissioners into City Hall to run Liverpool. That would provoke local hostility on a grand scale and would probably be unwelcome while giving the Militants just the sort of propaganda coup they should be denied.

The Militants, carefully orchestrating their crisis to coincide with the Labour Party Conference, should be ostracised by both Labour and the TUC. This would leave them to get out of their own mire and long-suffering Liverpoolians to express a view of it all in next May's local elections.

UK financial supervision

The risk of conglomerates slipping through the net

By John Plender

THE TWIN pressures of liberalisation and financial soundness have prompted a flood of improving literature from the regulatory authorities in Britain's financial markets over the past nine months. But there has been one notable omission, which is causing concern in some parts of the City. As yet, no one has produced an overall blueprint for the supervision of financial conglomerates.

Conditions, however, are not at present normal. As the report forcefully points out, the cost of debt throughout the world is currently being inflated by the vast credit demands of the world's strongest economy, the U.S. America is one debtor which the fund seems powerless to influence; hence the IMF is increasingly seen at the moment not as a debt collector for western and predominantly American banks. Since debt service burdens, at current levels of debt and real interest rates, are so large, many debtors now begin to suspect that it would be less painful to be cut off from new capital—not available at the moment—than to go on paying.

This is a potentially dangerous situation, and it is a pity that the fund's bureaucratic language and inhibitions tend to muffle the warnings that are evident in its reports. Its regular consultations, under Article IV, with all its members, which are described in an admirably lucid and constructive section, could provide the framework for much better co-ordinated policies in all the major economies, giving proper weight to the impact of policies on other countries and on world trade as a whole.

The fund naturally tries to achieve this kind of progress through quiet diplomacy, as does the OECD in its smaller sphere of influence. Bodies which depend on finance from member governments and a flow of confidential information are virtually bound to behave in this way. But when the imbalances in policy are as extensive as in the lines of its report, the dangers are great. It is tempting to suggest that the fund could hardly lose influence with the strong countries, and might gain a more patient hearing among the weaker if it would thump its pulp a bit harder.

The question is whether the supervisory authorities are up to the challenge. Could a failure in prudential control lead to shocks that undermine international confidence in London's markets?

The positive side of the equation is that the conglomerate problem is not a new one. It has been around since the days of the first industrial revolution, and it is still with us today.

less rigid than in the U.S. Sir Nicholas Goodison, chairman of the Stock Exchange, points out that he already regulates conglomerates and is prepared to extend what he calls the exchange's "umbrella of regulation" to areas like fund management into which stockbrokers have already diversified.

In the interim period before the Government's new system of self-regulation within a statutory framework comes into effect, the Bank of England is also busy crossing regulatory boundaries to cope with conglomerates. The Old Lady informally vetted the dealing rules of Robert Fleming and European Banking Corporation before they started to make markets in British equities outside the Stock Exchange.

The Bank is nonetheless acutely aware that in the new climate firms are moving from businesses they understand to ones in which the risks are unfamiliar—as indeed are the supervisors. The trend is bound to continue because new technology and deregulation not only enhance the attractions of convergence between different types of financial business, but often make it a defence necessity. And in a low growth world the financial services sector looks an increasingly attractive area to acquire industrialists.

As well as authorising these

companies, the various supervisory authorities will impose requirements for capital adequacy or liquidity commensurate with the risks being run in each individual component of the business. These will in turn be buttressed by requirements to segregate clients' funds from those of the business, by compensation funds and by parental comfort letters.

The inherent snag in this approach, as Mr McMahon himself admits, is that it does not necessarily prevent a loss of confidence in a non-bank subsidiary spreading to depositors on the banking side. It also

gives rise to problems of underlap and overlap, where different authorities unwittingly let things fall through the cracks or tread on each other's toes. The number of cracks will diminish next year when the City's new watchdogs, the Securities and Investments Board (SIB) and the Marketing of Investments Board (MIB), introduce minimum standards which self-regulatory organisations and directly authorised businesses will be required to observe. Yet the supervisors still face numerous hurdles.

The first concern timing. By spring next year outsiders who bought into Stock Exchange firms will be permitted to take their stakes up to 100 per cent. Many will have teams of people in place and ready for the long haul before the Big Bang desecrates securities transactions later in the year. With the conglomerates

excessive and costly reporting requirements. Many dislike the emphasis being accorded in the new system to dedicated capital, locked into a single unit of the business, because they see it as an inefficient use of capital.

There is also hostility in the City to the January White Paper's demand for segregation of clients' funds from the funds of the business itself, and not just in hitherto under-regulated commodity markets. Sir Nicholas Goodison at the Stock Exchange questions whether total segregation of funds is always necessary in stockbroking and believes that it would be difficult to implement.

In general, practitioners would prefer to see less emphasis on segregation and more on compensation funds. This is certainly understandable in the case of the Stock Exchange, with a good record on investor protection and a big, existing fund (on which individual claims will, once members are allowed to deal as both agent and principal in the new system, be limited to £2m). But for newer self-regulatory organisations, setting up a worthwhile fund carries a potentially high cost for the members.

On the other side of the fence, meanwhile, supervisors could also be ambushed by paper. Daily reporting in the gilt-edged market will, according to one top broker, require them to look for needles in haystacks. Clearly co-operation and coordination will be vital, both within diverse institutions like the Bank of England and between regulatory authorities. This will not be easy because two self-regulatory organisations covering similar activities are not required to produce identical rules in seeking to satisfy the new City bodies. To reduce the reporting burden and potential conflicts the SIB has been working on a concept of "lead" supervisors, chosen to confront the major function in a given conglomerate. Even if reporting requirements can be pruned in

this way, the supervisors nonetheless remain encumbered with full legal responsibility. There are, meantime, complex trade-offs between capital adequacy, compensation funds, segregation of client funds and promises of parental support. If client funds are properly segregated, for example, compensation becomes a less pressing priority. The SIB is not anxious to impose heavy restrictions on trade or professional business, notably in future and commodities markets. When licensed businesses deal directly with each other, the rules will be less demanding.

At the end of the day an unconsolidated approach to the regulation of conglomerates is unlikely to work unless some one also looks at the capital adequacy of the parent to see if it could or would stand behind troubled subsidiaries. By virtue of controlling two of the City's more tempting markets, the Bank and the Stock Exchange enjoy enough leverage to demand to "look through" subsidiaries to the balance sheet of the parent, in order to assess whether guarantees and comfort letters provide genuine support.

In practice, though, such leverage did not help much at Johnson Matthey Bankers. And the problem is further compounded by the international nature of many of the new City conglomerates. Where the parent is a foreign bank, the central bankers' carefully constructed safety net is in place. Whether attempts to bring non-bank parents into the net will work remains to be seen.

Success or otherwise in staying off shocks to the financial system in 1986 will hinge, ultimately, on the quality of judgment and the vigour of individual supervisors. The recent record of the Department of Trade and of the Bank of England does not, it has to be said, inspire any great confidence; and the smaller self-regulatory organisations will take on their responsibilities in the new, liberalised environment with minimal experience of regulation.

Small wonder that some supervisors are talking about damage limitation; regulatory disaster can rarely be foreseen, and so often. But from the point of view of the architects of the City revolution at the Bank of England and in the Government, that is a price that has to be paid if London is to play a significant role in the international securities business and retain its position as an international financial centre. One more area of British life, in fact, where the proponents of Tina (There is No Alternative) have won the argument.

Thirsty work at the barricades

Liverpool's confrontation with the Government over its council's spending has provided a welcome boom in trade for certain favoured city pubs.

Leading Labour councillors joined Militant Tendency supporters (including Ian Lowry, prime organiser of the planned strike by 30,000 council workers) on Monday night for a lengthy drinking session in a pub opposite the council offices. All felt the need for refreshment after hours of talks with regional union officials.

So far, however, the prime beneficiary among Liverpool's licensed victuallers has been Jean Hodges, manager of the Cross Keys—just 20 yards from the Liverpool boxing stadium where the largest trade unions have been holding their mass meetings.

Hodges found her public bar swamped on Monday by members of the General Municipal and Boilermakers' Union, who had spilled over from their mass meeting. So brisk was bar trade that the pub ran out of beer halfway through the lunchtime session.

She faced a different problem yesterday when it was the turn of the white-collar union Nalco to hold its mass meeting. The Nalco people were modest beer-drinkers—but drank the pub dry of white wine.

Well suited

A new man at the top of IBM's subsidiary is a rare event indeed. Sir Edwin Nixon, aged 60, who has announced his intention to retire in January, has become non-executive chairman, has been at the helm for 20 years.

Now Tony Cleaver, aged 47, another IBM man to his finger-tips who has been with the company for 23 years, is to move up from general manager to become the next British chief executive.

Men and Matters

to specify the exact shade of grey for their business suits — Cleaver is unusual as a Classics graduate in a high-tech world.

After school at Berkhamstead he read Classics at Trinity College, Oxford, before joining IBM in 1962.

Since then a thread has run through his career of trying to relate the business world, and computers in particular, to the wider community. For two years until 1980 he was a director of the government-backed National Computing Centre in Manchester, and he is a director of Business in the Community. He is also a member of the council of Templeton College, Oxford, which was formerly the Centre for Management Studies.

Off duty he is a keen cricket follower and an MCC member.

Colour-blind

A Cabinet Office report yesterday refers to the "typically drab appearance of government offices."

But one Whitehall department, approaching year-end with spare cash in the kitty and determined not to hand a penny back to the Treasury, decided to redecorate recently.

The management's efforts drew the following response from one of the department's more senior officials: "May I, on behalf of myself, my staff, and all who dwell on the third floor, express our deep appreciation of the departmental decorations?"

approaching retirement will prevent my seeing how the colours mature. "Perhaps you would be so kind as to pass on my comments to whoever is so generously paying for these works."

Glengarry

Welshman Gareth Jones—who coined the phrase "Silicon Glen" in the 1970s to catch the headlines for Scotland's nascent electronics industry—has joined accountants Ernst and Whinney to head the firm's management consultancy group. His brief is quite simple: expand.

Jones, 52, is a short but cheerfully expansive man. He resigned from management consultants Booz Allen earlier this year "to take personal stock." He had been with the firm for 16 years and was the first non-American elected to its board in 1981.

But a six month study of Asian Pacific for Standard and Chartered Bank convinced Jones that he did like the consultancy business after all. "You earn your reputation by results," and he gratefully accepted Ernst and Whinney's challenge.

From what you might call a typical Welsh background—"Born in Gwent, 23 choirs, 24 chapels and 26 pubs"—Jones spent six years as a teacher after university.

He took another, part-time, degree in psychology, and suddenly found his horizons widening.

Not surprisingly, Jones finds a lot of satisfaction in the fact that Scotland now has 40,000 people employed in electronics more than in coal, shipbuilding or textiles.

It was with Booz Allen that Jones played a major part in the 1970s devising the Scottish Development Agency's strategy for building an electronics industry north of the border.

"I was recommended the SDA to lead Scotland on its educational and technological strengths. The secret was to get companies to establish their research and development in Scotland. Once that investment is made, they are not going to switch somewhere else in a hurry."

The Bonn bricklayer set out with a barrow of bricks and some mortar to the Bonn Chancellery. His intention was to build a wall round the office of Chancellor Helmut Kohl. A secretary in the Chancellery was among recent defections.

The police stopped Drabinski when he was 50 yards from the proposed line of his wall. The joke had gone far enough, they told him.

Drabinski argued, "The wall might not do much good. But it couldn't be any worse than our counter-intelligence."

Boss man

Every time the new president of Intercontinental operations at Regis McKenna introduces himself, he reinforces his authority.

The newly-created post at the worldwide marketing and communications company is held by Bruce LeBass.

For details of every company on the USM, just send us yours

From a leading financial data service in Europe come two key sources of information on the UK, Unlisted Securities Market (USM) Card Service and the Extel USM Handbook. To have the benefit of them, all you have to do is fill in this coupon.

The Extel Unlisted Securities Market Service
The service provides you with details of all the companies traded on the USM, along with a monthly record of dealing prices. Every new subscriber receives a complete set of annual and news cards, which is then updated twice every week.

Annual subscription: £500 (overseas—subject to quotation)

The Extel Unlisted Securities Market Handbook—October 1985 issue

The Handbook provides you with the key facts on every company quoted on the USM at the end of September 1985. In addition to company activity and financial information, it gives you a share price record, a directory of registered offices, telephone numbers, names of senior executives and details of each company's Registrar.

Annual subscription: £225.00 (published October and April)
Price per single copy: £15.00 (discounts for quantity orders)

Observer

NEW IDEAS are emerging in discussions on the disposal of radioactive waste. Several countries with wide open spaces and a need for foreign currency have offered to act as refuse collectors for the congested European communities. And Nirex, the agency charged with managing the disposal of most British waste, has said it is considering compensation for communities hosting its new repositories.

For the least dangerous types, the ocean depths are the most convenient method of disposal, and also the safest, as the London Dumping Convention confirmed at its meeting in London yesterday.

But Egypt, Sudan and China have all offered their deserts as waste dumps. The Soviet Union has offered to store radioactive waste for Austria, to encourage that country to use its moth-balled Swentendorf nuclear plant.

Britain's Nuclear Industry Radioactive Waste Executives is debating whether the compensation should go to the community, or to individuals whose homes or businesses may be depreciated in value.

The basic truth of Mr Michael Heseltine's assertion when Environment Secretary in 1981, that nuclear waste is a simply management, and not scientific or technical problem, is now beginning to be realised. There is a market price to be set for any inconvenience — real or perceived — which attends the safe management of the radioactive wastes.

The idea of becoming a "nuclear dustbin" for other nations' wastes arouses strong passions in countries such as Britain and France. Both have objected to the proposed system for the reprocessing of spent nuclear fuel to sign contracts agreeing to take back the most highly radioactive wastes, but not the larger volumes of less radioactive wastes from the process.

Instead of sending their spent fuel to Britain or France—the only two nations operating commercial reprocessing factories—countries can simply store their spent fuel. As stored, the fuel is effectively a mixture of several kinds of radioactive waste, including the most deadly ones.

The technology to store spent fuel for long periods—several decades at least—is highly developed. Sweden, for example, has just begun to load its spent fuel into CLAB, a £150m underground repository built from solid granite at Oskarshamn in south-east Sweden. Nuclear power accounts for over 40 per cent of the electricity used in Sweden, and some 300 tonnes of spent fuel a year will be stored under

NUCLEAR WASTE

Friends of the Earth supporters take part in anti-nuclear protests in London yesterday

The 'refuse collectors' step forward

By David Fishlock, Science Editor

water in CLAB, until further decisions are taken by the government whether to reprocess it or bury it permanently elsewhere in Sweden.

West Germany has developed a different interim storage system for its spent fuel. It plans to reprocess and recover the uranium and plutonium. But in order to keep its reactors running while they build a reprocessing plant of their own, they are storing spent fuel dry, in 70-tonne cast-iron casks.

This system for temporarily storing spent fuel has provided China with a convenient way of pursuing its offer, made early last year, to store nuclear wastes for West Germany and Switzerland.

Now the Chinese have made an offer the Germans probably cannot refuse. They have offered to take casks of spent fuel and store them in the Gobi Desert.

The Chinese are ready to take up to 1,000 tonnes of spent fuel, as part of a barter deal in which they hope also to exchange uranium and non-ferrous metals for pressurised water reactors from Kraftwerk Union. Two senior German nuclear engineers—Dr Klaus Messer of RWE, its biggest

electricity company, and Dr Carsten Salander a director of DWK, which manages the disposal of spent fuel and nuclear wastes in Germany—led the team for the storage plan on a visit to China last month. A Chinese delegation will follow it up in Bonn next month.

For Germany, the scheme has the obvious attraction of giving KWU an edge over its rivals Framatome (France and Westinghouse U.S.) in providing the PWRs China wants to order. But another important attraction for Germany is that it is another option for ridding itself of radioactive wastes. In order to get a licence to operate a new nuclear station, the company is legally required to show that it had made adequate provision to dispose of its wastes. Opponents of nuclear power therefore focus their efforts on preventing the storage and reprocessing of fuel.

Fuel sent to China will become the property of China, to be reprocessed or permanently buried, as the Chinese see fit. It will be well beyond the reach of the anti-nuclear campaigners like Greenpeace and Friends of the Earth.

Nevertheless, the Chinese store will have to be operated under international safeguards and regularly inspected by the International Atomic Energy Agency to verify that no plutonium is being diverted into the Chinese nuclear weapon programme. China joined the agency last year, but has yet to agree to international inspection.

The idea is to start with a contract for 50 tonnes of spent fuel. This is considered enough to test the principles of storage, transport and safeguards on a realistic scale, but not so much as to raise major problems with countries which originally supplied West Germany with nuclear fuel. But Switzerland may add another 50 tonnes.

The question of what price should be put on this service by China was first approached by assuming that the Germans might pay the going rate for reprocessing. In the latest discussions, however, it is being stressed by the Germans that the rate they are willing to pay is nearer the estimated costs of reprocessing for the second decade of the life of the new factories. This is put at only two-thirds of the price during the first decade, when the capital cost has been written off.

More options for disposing of nuclear waste are also needed in Britain. Nirex's disclosure that it had discovered at Billingham what appeared to be an almost ideal repository for Britain's nuclear wastes sharply focused the energies of anti-nuclear campaigners. The Government was obliged to ask Nirex to look elsewhere, and to tender at least three possible sites for each type of repository it is proposing. All three proposals will then be examined at a single public inquiry.

Nirex once believed that the way to deal with the waste was to seal it up irretrievably, so securely that no-one could harm himself, no matter how hard he tried. This is no longer the case. The pressure now is for accessibility, so that the public can be kept assured that the waste is not leaking.

Until 1976 the anti-nuclear campaigners had concentrated on reactor safety and almost ignored nuclear waste. That year saw publication of the report by Sir Brian (now Lord Flowers) on the environmental impact of nuclear energy, which raised sufficient doubts about public safety to encourage campaigners worldwide to switch their attention to nuclear waste plans. They were undoubtedly helped by various problems at the ageing Sellafield (Wind-scale) factory of British Nuclear Fuels, widely interpreted in terms of leaks of radio-activity.

Today, radio-activity waste is seen by the public generally as a more serious problem than nuclear reactors, says Prof Terence Lee, a psychologist from Surrey University who has done painstaking research into public attitudes towards nuclear energy.

Perceptions differ significantly from country to country, because of the way campaigns of opposition have been focused. Several countries — France, Japan, Italy, for example — have offered inducements of one kind or another including cheaper electricity, to help persuade people to accept nuclear activities.

There is already a precedent in Britain. BNFL is helping restore Georgian buildings near Sellafield and building a £800,000 sports centre.

Prof Lee goes further. His findings suggest not only that the British public now demands access to the waste, but also that nothing is leaking, but that one person in every two believes that neighbours of nuclear repositories should be compensated as individuals.

The forthcoming public inquiry into Britain's next radioactive waste repository could well be asked to determine a fair compensation for neighbours of the chosen site, which Parliament would thereafter see was paid.

UK university admissions

Why September is such a cruel month

By Jonathan Steinberg

SEPTEMBER is the cruellest month for thousands of university applicants and their families. The official statistics (see panel) show why. They were supplied in a written parliamentary reply on June 3, by an official at the Department of Education and Science.

Since 1978 the number applying to universities has risen by just over 10 per cent and the number accepted has fallen by nearly 4 per cent. Those sums add up to a lot of unhappiness and disappointment.

As it happens, my eldest son was a number for 1984 in the left-hand column but not in the right. Both he and his girl friend failed to meet their conditions, and this time last year our house was full of that peculiar gloom and helplessness which afflicts the failures in our restrictive system of education. Should they retake? Could they retake? Was there anybody to give them advice? In the end, both retook and, I am happy to report, got off next week to universities of their choice.

Of their immediate circle of friends, ten in all, only one made it last year. Three decided to retake A levels, two succeeded (my son and his girl friend). The third dropped out and took a job. Here is an account of the seven others: one has emigrated to Australia. One is on the dole. One works in a garage. One does voluntary social work. One has simply disappeared and one has begun a day-release course in electronics. If any business systematically wasted 70 per cent of its raw material the way our educational system does, it would soon be bankrupt.

The waste is the greater because so few ever get to A level. According to Brian Simon in his recent book *Does Education Matter?* roughly 10 per cent of the age cohort achieve five or more O levels. All ten of my son's friends fell into this academic elite category, and the system has simply discarded them. It is rougher on those who try to return later. There is no money for persons who later in life wish to take A levels for the first time; for those who fail

or fail to meet conditions, our system closes off opportunity.

It seems to me that the time has come to call a halt to this massacre of the innocents and begin to think hard about what we allow society and its institutions to do to the young. As a helpful first step I offer a distinction drawn by Mario Barbagli, one of Italy's leading students of education. He writes that there are open systems which run the risk of producing too many qualified people for the available jobs. This is the situation typical of rapidly developing societies in the third world. Then there are closed systems which restrict access to higher education. They in turn risk producing too few qualified people.

The British educational system manages to try to do both at the same time. Despite shrieks and groans, comprehen-

sations, then we are only creating frustration with perhaps disturbing social consequences. We have to select: to ration the educational opportunities so that society can cope with the output of education.

In other words, tighten the valve and keep them out even more rigorously than the system does now.

Readers of this paper need no reminding that the university of Tokyo produces more engineers than the entire British education system or that 80 per cent of Korean students complete high school end more than 60 per cent go on to higher education. Nor will they forget the relative economic growth rates of Japan, Korea and Britain. Yet the DES mandarins have a point. If you offer opportunity to millions of young people in our child-centred primary schools and our open comprehensive schools and then slowly but relentlessly take it away again, some of them will respond with anger.

Might it not be more humane as well as more prudent to turn back from these restrictive and repressive attitudes before it is too late? We need more places, not less, more opportunity for higher education at all ages not less, and we need them now.

A way to do that would be to open a share of British universities to any candidate who had achieved two A levels at whatever grade. This in effect happens in West Germany and Italy.

A similar system operates in Finland which supports more than twice the percentage of students in tertiary education as that in the UK. Instead of cutting and reducing higher education, my proposal would expand it rapidly. Unit costs would fall and so would standards. And so they should. Not all students might find a seat in the lecture hall or a comfortable bed-sitting room in a modern dormitory but there would be a lot more of them. September might not then be so cruel a month.

Brian Simon, *Does Education Matter?* London: Lawrence and Wishart, 1985, £5.95.

The author is a fellow and tutor at Trinity Hall, Cambridge.

Applicants and acceptances through the Universities' Central Council on admissions scheme for universities in the UK

	Applicants	Acceptances
1978	157,505	80,530
1979	168,362	82,398
1980	168,354	84,695
1981	167,096	80,341
1982	171,496	77,752
1983	172,738	74,860
1984	173,674	77,431

sive secondary education—an open system—now dominates its sector, but tertiary education is the most restrictive in Europe and government policy has made it more so. Something has to give. Brian Simon quotes an interview with a senior civil servant in the Department of Education and Science who offers the mandarin solution:

"In some ways this points to the success of education in contrast to the public mythology which has been created. When young people drop out of the education production line and cannot find work at all, or work which meets their abilities and

High land prices

From Mr D. Harrison

Sir—I am astonished that David Redden (September 21) has joined those who confuse cause and effect. The (so-called) high price of houses would be precisely the same as it is today, should Sir George Young the Environment Under Secretary have a magic wand to enable developers to buy land for nothing. It is not the price of the land which determines house prices, it is the purchasers' ability to fund the transaction. This ability is extended because of tax relief on mortgage interest.

The way to make house prices more competitive is to remove this interference in the market, albeit on a gradual basis as recommended by the Royal Institution of Chartered Surveyors and the Duke of Edinburgh.

A similar interference on the market exists with the enterprise zones. These were created as a political "back lash" against previous regional development policies. Although developers in enterprise zones are able to produce buildings more economically, the occupants find themselves paying a rental which soon mops up the saving in rates. I do not disagree with this situation, since I believe in the unfettered operation of the law of supply and demand. This cannot be achieved while anomalies exist like tax relief on mortgage interest and enterprise zones, among others.

Desmond Harrison, Fox & Harrison, 51 Lower Hill Lane, Walsall, Staffs.

Heliport on the Thames

From Mr D. Scuse

Sir—Mr D. L. Stebbings (September 18) repeats the too long discredited myth that helicopter travel is only for the privileged few seeking to save minutes of their precious time and that the helicopter is an unjustifiable environmental pollutant.

An executive's time in today's commercial world is not only money, it is of the essence, and the maximum flight time of 10 minutes by helicopter at 8 am from Heathrow to the City severely compares favourably with the 1½ to 2 hours by road. An overseas buyer with a multi-million dollar contract in his pocket can fly to the City, visit several factory sites around the country, do a deal and be back at Heathrow in the evening to catch his flight home. If he uses a helicopter, it is not just "minutes" that are being saved.

And these are not fairy-tale examples. They happen every

Letters to the Editor

day, all day, involving 250 commercial helicopters owned by charter companies and major industrial companies transporting directors, salesmen, executives and clients on business—not pleasure. For they are too expensive to buy, maintain and operate to be used merely as prestigious toys. Businesses must watch their overheads and expenses and, if the helicopter does not make economic sense and is not viable, it will not be used.

Indeed, jealous of the City's reputation as the world centre of banking and commerce, the Court of Common Council last year recognised the value of helicopter facilities—a view which is shared by over 50 per cent of the major provincial towns and cities throughout the country who have, or intend to provide, similar facilities.

Mr Stebbings complains of the noise: local planning authority statistics show that a single engine helicopter, typical of those operating in and around the London control zone, flying at 250 ft, makes the same amount of noise as a car at 50 ft and less noise than a motorcycle or the ambient noise of main or arterial roads. That is not to say that they do not make a noise, only that they are no noisier than the other day to day sounds to which we have become accustomed. Like the pleasure boats on the River Thames?

Helicopters are being used for the country's financial and commercial benefit and London must and will have, as do all the world's major business centres, both its helicopters and its helipads.

D. G. Scuse, British Helicopter Advisory Board, Knowles House, Cromwell Road, Redhill, Surrey.

Barristers' fees

From Mr J. Newman, Sir—Your Law Courts correspondent (September 18) reports that the Senate of the Inns of Court and the Bar have claimed from the Government an increase of between 30 per cent and 40 per cent of income for barristers acting in criminal cases funded out of the legal aid system, based on an independent survey carried out by Coopers & Lybrand. The recommendation is on the basis that barristers engaged in this work should be paid commensurate salaries to barristers working in Govern-

ment departments. May I make an independent suggestion: that the salaries of those employees of Government departments be brought into line with the self-employed barristers. In that the Government achieves cost savings of between 30 per cent and 40 per cent on those civil servants' pay. Further, could I suggest that the Government takes action on the restrictive practice of barristers further to reduce the costs of barristers practising in criminal cases. John A. Newman, 1, Old Burlington Street, WI

Exchange control

From Mr E. Barber

Sir—Whilst recognising the need for investment in British industry and supporting the concept of a national investment bank, nevertheless fear that Roy Hattersley's proposals (September 20) contain a fatal flaw, wholly detrimental to the Labour Party's electoral prospects and the credibility of a future Labour Government. I refer to the suggestion that investment will be financed by repatriated funds generated by a harsher tax regime on overseas holdings. Under the Treaty of Rome, this is illegal in respect of other EEC countries under Articles 8(c), 8(2) and 67(1) and in respect of non-EEC members, is contrary to the spirit of Articles 70(1) and 71.

A letter received by me from Massimo Russo, EEC director-general for economic and financial affairs, said: "It is doubtful whether punitive tax disincentives would be compatible with Community Law." A subsequent letter pointed out the stipulations of the EEC Council's directives of 1960 and 1963 for the implementation of Article 67 of the Treaty (abolition of restrictions on the movement of capital), which will obviously prevent what Mr Hattersley desires. Edward Barber, 5 William Paston Road, North Walsham, Norfolk.

Going to the bazaar

From the Director, Think British Campaign Sir—Your report September 18 that "considerable savings" could be made on the annual defence bill were Britain less committed to buying

British is worryingly naïve. It may well be that in certain specific areas, defence equipment can be purchased more cheaply abroad. This is, however, not the main concern where the safety of our nation is at stake.

Excellence of design and security of supply should be paramount. Where would be the value of a national saving when under attack, we sought spares or replacements from a supplier who had since aligned himself with our enemies?

Might I suggest that economies of scale might be better made by assisting our defence equipment manufacturers in research and development rather than in shopping around the world's bazaars for a bargain? M. A. Charrington, 45 The Aldwych, WC2.

Pricing petrol products

From Mr J. Gessler

Sir—Mr Gibb criticises artificially low tender prices for oil to the public sector (September 16). A number of offers for gas oil were made below refinery net back prices in July and August, and we expected similar price rises at the end of the summer tendering season.

Last year's attempt to dismantle the elaborate charade of high schedule prices combined with 30 to 40 per cent rebates was opposed by several majors, and has not produced a permanent change. It is doubtful whether another attempt will succeed unless organisations of smaller users can show that the present system is unfair to small purchasers.

The present excess in refinery capacity leads to intense competition for market shares and low tenders followed by higher winter prices are a consequence. It is therefore helpful to know when tenders are considered not only the initial offer but the situation to which different companies have been willing to adjust rebates in the past. Many previous schedule price rises have been eroded in this manner.

The tendering system for public bodies has its counterpart in the periodic contract revisions by large companies. One major difference between the public and the private sector is, however, that rebates to private companies are adjusted much more frequently throughout the year. Constant monitoring of the market situation throughout the year and not only when tenders are awarded.

J. K. Gessler, FEC Consultants, 63 Queens Road, Oldham, Manchester.

NEW GUIDELINES MAY MEAN CLOSURE OF 50 PITS

Market to set UK coal output

BY JOHN LLOYD, INDUSTRIAL EDITOR, IN LONDON

BRITAIN'S state-run National Coal Board yesterday formally ended the practice of planning its output and told the country's three mining unions that the market would now determine production levels.

Mr Ken Moses, the board's technical director, has developed a new criterion which all pits must meet if their future is to be secured. Area directors are now being told that their pits must produce coal at no higher cost than £1.50 a gigajoule, roughly £39 (\$58) a tonne. The present average price for the bulk of board production is £44 a tonne.

He said that the board would, as expected, attempt to stabilise production at 90m tonnes a year, though it would retain the capacity to produce 100m tonnes. This is a drop from the 97.4m tonnes which the board produced in 1984, and which was the main cause of the year-long

miners' strike which started soon afterwards. Mr Moses would give no details on the numbers of pits to shut or men to be made redundant - but most estimates produce a figure of around 50 pits, and 5,000 men, over the next five years. Most of these would go before March 1987, when the Conservative Government had declared the board must break even.

The new strategy, drawn up by Mr Moses, replaces the traditional five or 10-year plans with a planning cycle based on a yearly review involving continuing discussion with area directors.

The fundamental criterion spelled out in a board statement, is that pits which show no prospect of maintaining average costs at levels consistent with the prices which can be realised from coal sales will first be given a chance to improve results - then closed if they cannot.

The board also told the unions that its National Smokeless Fuel subsidiary, which produces fuel for the steel and home heating markets, was only kept going by large bank overdrafts guaranteed by the board - with the implication that further cuts will be made to its plants and its workforce of more than 4,000.

Mr Moses refused to move from his insistence that the market would decide the industry's size, saying that "through the next five years we are hoping to stabilise the industry at a production level of 90m tonnes. If things improve we will have the capacity to produce more; if things get worse, we will have to review the position again."

In a final stark dismissal of the 1974 Plan for Coal, which had formally governed the industry until this year, the board statement said that "for a variety of reasons, the basic assumption of energy short-

ages and consistently rising real prices had proved fallacious."

Unusually, the most hostile reaction within the meeting came from Mr Alan Wilson, general secretary of the British Association of Colliery Management, representing the NCB's 15,000 managers. He objected strongly to the absence of Mr Ian MacGregor, the board chairman - on a business trip to China - and told the board that morale was rock bottom and communications bad.

By contrast, Mr Peter Heathfield, general secretary of the National Union of Mineworkers, said only that the new criteria for profitability could mean a "dramatic" cut in capacity. Mr Arthur Scargill, the NUM President, failed to attend the part of the meeting at which the new strategy was outlined, although he had briefly chaired the earlier part of the meeting.

Peking appoints six to Politburo

By Robert Thomson in Peking

SIX CHOSEN sons of communism ascended yesterday to the power elite of the Chinese Politburo, completing a series of major leadership changes orchestrated by Deng Xiaoping in an attempt to perpetuate his brand of pragmatism within the ruling party.

Among the six are Hu Qili, 55, and Li Peng, 57, who are apparently being groomed to head the party and government, respectively. The Politburo appointments are to fill vacancies created last week by the departure of 10 elderly members in the mass resignation of more than 130 senior officials. Surprisingly, only six replacements were approved, pruning the Politburo to 20 members, with two additional alternate members.

Most of the replacements are confirmed "Dengists", ready to carry on the economic and social reforms initiated by the Chinese leader, and diplomats say none of those appointed will provide opposition to his plans.

In addition to Hu and Li, the other new members are two vice-premiers, Tian Jiyun, 55, and Yao Yilin, 58; the Foreign Minister, Wu Xueqian, 84; and Qiao Shi, 61, who has been head of the organisation department of the party's central committee.

The appointments again highlighted the decline of the military in Chinese politics. Six of the 10 members who resigned last week had military ties, but none of those chosen yesterday does.

A communiqué released by the central committee after it gave its imprimatur for the new appointments said the changes were "in line with the principle of furthering the succession of new members to old in the central leading bodies."

The communiqué also announced that three members of the central committee's secretariat, responsible for the day-to-day running of the party, had resigned, and five new members had been selected, expanding that body to 11 members. Those five include Hao Jinxun, 50, a former Textile Industry Minister, and Wang Zhaoguo, 44, a former Communist Youth League head. Both had been highly lauded for a Politburo post.

Despite a highly critical speech on Monday by senior Politburo official Chen Yun, who confirmed his opposition to the direction in which Deng is taking China, the communiqué claimed that yesterday's central committee session was conducted in "an atmosphere of unity."

Diplomats believe that while China's program is unclear, its support with the party is limited. If the mass resignation is any guide, the central committee meeting would have been pure theatre, with the newcomers already decided.

Yesterday's announcement included no news of a replacement in the Politburo standing committee for Marshal Ye Jianying, who resigned last week. Officially the "select six" of the standing committee are at the top of the political tree, but for the time being at least, they will be the "select five."

Japanese intervene against \$

Continued from Page 1

about 3 1/2 per cent of its value, it ended in London yesterday almost unchanged on the day.

Since last Wednesday the dollar has lost 4 1/2 per cent of its value as measured by its Bank of England index against a trade weighted basket of currencies.

On Friday market sentiment turned sharply against the U.S. currency when estimates for the third quarter U.S. GDP suggested the U.S. economy has been growing more slowly than expected.

The New York meeting of finance ministers and central bank governors from the U.S., Japan, West Germany, the UK and France reinforced this sentiment, although it had been arranged last month.

The five powers issued a strong statement of the need for a lower dollar and their determination to co-operate to bring this about.

After Monday's steep fall there was some respite in the markets about the extent to which the central banks would intervene and some renewed interest in the U.S. currency, particularly in the Far East.

However, Japan's heavy intervention helped the yen to strengthen somewhat over the day to a closing value of ¥237.7 in London, compared with ¥217.0 on Monday. Against the D-Mark the dollar weakened to DM 2.714. The pound also pushed ahead to \$1.432 at the London close compared with \$1.427 on Monday.

THE LEX COLUMN

Imperial waves a white flag

Howard Johnson ranks among the most disastrous acquisitions ever made by a British company, so the markets might have been expected to show some relief at yesterday's overdue separation. Yet, as it turned out, ill fortune dogged Imperial to the very end. Monday's collapse in the dollar reduced the sterling value of the \$314m cheque Marriott Corp finally agreed to write by over £10m and the equity market greeted the news by making Imperial's share price drop to 180p.

Imperial's helplessness by producing the most obscure of statements. Whatever the true value of the deal, it is certainly not \$314m. Almost half of that figure is accounted for by intra-group loans, which wash out on disposal, and the more material numbers are the improvement in group liquidity about £210 after shedding Hojo's external debt - and the reduction in shareholders' funds of £127m.

The market had hoped for more but since Hojo will make next to no profit in its current financial year, Imperial can scarcely be blamed for taking the money on the table. With the first anniversary of the disposal negotiations already past, Imperial must have been under enormous pressure to reach a final decision. Had it elected to retain Hojo, the equity market's response would almost certainly have been fiercer.

Yesterday's statement removes only one of the three uncertainties surrounding the group. The assumption must be that Imperial will use its strong balance sheet - at a not possibly be covered. Yesterday's figures for the year to June proved that picture to be true but partial.

Barratt's pre-tax profit of £4.1m for the year to June are neither here nor there in relation to £338m of turnover, and the unchanged dividend was indeed paid entirely from reserves. Yet the radical wave done on an overextended balance sheet - and on top-heavy fixed costs - should just about suffice to cover an unchanged dividend in the current year.

The attack on working capital, which cut debt by about £20m in the final weeks of the year, should save about £10m of interest, while the elimination of ten regional subsidiaries should take a substantial amount off the overheads.

Whether Barratt can regain anything like its former growth path depends on Sir Lawrence's changed product mix, creating a 40 per cent rise in unit prices over two years.

Moving away from the heavy reliance on first-time buyers was probably inevitable, even before the timber-frame debacle cut into margins on the smaller units. It is now the pre-condition of Barratt's stock-market rehabilitation.

A budget which assumes that UK housebuilding can generate a 20 per cent increase in revenue on unchanged unit sales - and without re-loading the balance sheet - leaves little enough room for error. But the 10 per cent yield at yesterday's 180p says more about past disappointments than this year's probable recovery.

Fleet Street

Britain's national newspaper industry is a curious case of supply and costs often being less predictable than demand.

Amid the 15 per cent rise to £46.5m in News International's 1984-85 pre-tax profits is a cocktail of rising demand from both advertisers and readers, and much higher production costs.

At the Sun and the News of the World the losses from industrial problems more than offset the benefits from increased sales.

The Times, despite a 35 per cent improvement in advertising revenue and higher circulation figures, produced the same loss as last year, again because of higher production costs. The Sunday Times, almost single-handed, was left to drag up overall profits.

In advertising terms national newspapers have never had it so good: advertising expenditure has been on a rising trend for the last decade, virtually untouched by recession, and in the last few months there has been a noticeable switch from TV to print.

But the two newspapers scheduled to hit the market next spring will help to soak up demand, and Mr Eddie Shah's publication, if it is produced with new technology, should have a substantially lower and more reliable cost base. So it is hardly surprising that both News International's statement and that of BPC last week stress the importance of moving - to updated printing plants.

After all, newspaper buyers are notoriously price-sensitive, and if Mr Shah decided to sell his paper at half the price of his rivals, they would be hard put to make any profit at all.

Iraqi bid to 'wipe out' Kharg terminal

By Richard Johns in London

IRAQI AIRCRAFT attacked the Iranian oil terminal at Kharg Island again yesterday, the 11th strike since August 15, in what Western diplomats now believe is a concerted campaign to wipe out the facility.

An Iraqi spokesman was quoted by Radio Baghdad as saying: "Our aircraft launched a destructive attack on what remained of Kharg's facilities and equipment in order to completely destroy them and keep fires caused by our previous attacks ablaze."

The Sea Island terminal, the most important of the two jetties with its capacity to handle four ultra large crude carriers, is still out of action after a particularly effective raid on Thursday, according to oil company executives.

Damage was also sustained last week by the main control room and two pumping stations, it has emerged. Also hit was the large and very vulnerable tank farm in which, however, only very limited quantities of oil are stored.

At the older T-jetty on the east side of the island, six of the 10 berths are operational, according to informed diplomatic reports. The water there is only deep enough to accommodate supertankers of up to 250,000 deadweight tons fully loaded.

Theoretically, if Iran could charter a sufficient number of tankers and if owners were prepared to allow enough tankers of the optimum capacity to use the facility, it might still be possible to maintain exports close to the 1.6m barrels a day level sustained until recently. This is also Iran's quota under the Organisation of Petroleum Exporting Countries' prices and production pact.

In practice, however, the damage to the Sea Island terminal could prove a devastating blow to Iran. The facility had been used to load oil for delivery to Sirri Island, a trans-shipment terminal beyond the range of the Iraqis.

Continued raids could make it difficult to carry out repairs. Iraq has now apparently abandoned the constraints urged upon it by other Arab oil-producing states of the Gulf which are apprehensive about an escalation and widening of the five-year-old war.

Warnings of retaliation aimed at stopping the flow of Arab oil from the Gulf have been conveyed directly to them by Iran, according to the most recent edition of the Middle East Economic Survey.

Iran so far has concentrated on intensifying its interference with dry cargo shipping, confiscating goods destined for Iraq. Captain Hussein Malek-Zadegan, commander of the Iranian navy, was quoted yesterday by the official Iran news agency as saying that 42 vessels had been intercepted in recent weeks.

Britain heads for cereals glut despite poor summer weather

BY ANDREW GOWERS IN LONDON

THIS YEAR'S UK cereals harvest seems certain to be the second largest on record despite the poor summer weather, according to a preliminary estimate released yesterday by the Ministry of Agriculture.

But farmers are warning that their profits are likely to be sharply down from last year's bumper levels, due both to reduced yields and the generally poor quality of the crop.

For the European Community as a whole there are expectations of a lower crop but a growing surplus. The European Commission estimates that the total cereals harvest will be about 141m tonnes, compared with last year's 150m.

The British Ministry estimates that wheat yields in England and Wales this year are between 6.75 tonnes and 7.55 tonnes per hectare, and those for barley are between 5.3 tonnes and 5.8 tonnes per hectare. Although that represents a fall from last year's 7.7 tonnes, it is still well above the average between 1980 and 1984.

On the basis of cereal plantings in the UK as a whole, the yield figure would imply a total harvest of between 24m tonnes and 26.5m tonnes, compared with last year's record of 28.5m - although yields may be lower in Scotland. The previous largest harvest, at 21.8m tonnes, was in 1982-83.

With about 4m tonnes of grain still in store from last year's record harvest, that means Britain's cereal surplus problem is likely to be worse than ever this season.

Prices on the UK market are currently below the EEC's support price level because of expectations that large quantities of cereals will not pass the standards for official purchase, or "intervention." This means much of the grain is being sold off cheaply for animal feed and flour-millers are having difficulty in getting access to material of the right quality.

There are reports of large shipments of milling quality grain being imported from continental Europe.

The UK's wheat surplus problem is worse than in any other EEC country. Of the six tonnes of wheat in Community intervention stores, the UK's proportion is 61 per cent.

In addition, UK exports are particularly slow this year. According to figures released by the Home-Grown Cereals Authority yesterday, exports of wheat since August

1 have been 7 per cent down on the 1984 level, and those of barley are nearly 50 per cent lower.

The UK ministry's figures were greeted with some scepticism yesterday by farmers - many of whom are barely two-thirds of the way through harvesting because of the late start caused by rain and wind in July and August.

The National Farmers' Union (NFU) came up with its own estimate that the cereal crop will be at least 13 per cent - or 3.5m tonnes - down on last year, with yields of wheat and barley both substantially below the ministry's figure. It cautioned that yields of the later-harvested crops may be lower still as a result of sprouting, and that the weight of grain sold off the farm will be markedly lower than the harvested quantity because of losses during drying.

Mr Patrick Troy, chairman of the NFU cereals committee, said: "For many individual arable farmers, the 1985 cereal crop harvest has been a disaster. Returns have been slashed not only by low yields, but also by low quality and by prices 20 per cent below the levels two years ago, and very heavy harvesting and drying costs."

Despite a highly critical speech on Monday by senior Politburo official Chen Yun, who confirmed his opposition to the direction in which Deng is taking China, the communiqué claimed that yesterday's central committee session was conducted in "an atmosphere of unity."

New allegations against Hernu highlight role of French press

Continued from Page 1

nisation but without specifying how it should be done. General Jean Sauvalier, then head of the President's personal military staff and now chief of staff of the armed forces, was kept in touch, as was General Jeannou Lacaze, the former chief of staff. But Le Monde says that neither the Prime Minister nor the President was informed.

Le Monde published in support of this hypothesis remarks by M Bernard Tricot, the senior official appointed to carry out an inquiry into the affair. He was quoted as saying that he would "not exclude an angry outburst by the Minister of Defence. He probably didn't say 'sink the boat' but 'clear the matter up and fast'."

Mr Tricot also told Le Monde that he did not think the Prime Minister's office was involved.

M Fabius had lengthy talks with President Mitterrand yesterday morning. After today's Cabinet meeting, he is scheduled to go on television tonight in what is a regular monthly appearance.

As the political crisis seemed to be moving towards a climax, the Government clamped down on leaks to the press.

Two officers in the DGSE were arrested on allegations of having provided the press with details of the blowing up of the Rainbow Warrior.

In London, meanwhile, Britain pursued its demand that France should compensate those who suffered loss through the sinking of the Rainbow Warrior, a UK-registered vessel, writes our Foreign Staff. The Foreign Office instructed the British ambassador in Paris to call at the French Foreign Ministry.

Yesterday's developments underline the key role the French press has played in uncovering the Greenpeace affair, not only through its own investigative journalism but also through its use of "planted" information from official sources.

Le Figaro, meanwhile, carried allegations yesterday morning from a former head of French counter-intelligence that much of the information that appeared last week on the identity of those who had blown up the Rainbow Warrior came from the personal staff of M Pierre Joxe, the Interior Minister.

Those allegations, only put in more formal terms the widespread belief that M Joxe - convinced that M Hernu had to go to save the President - was using the press to accelerate the crisis.

Le Monde denied formally on Monday that its informant over the identity of the third DGSE team responsible for sinking the ship had been M Joxe.

Le Monde has, none the less, in recent weeks been returning to the traditions of combative investigative journalism that it last displayed in another cause célèbre - the affair of the Bokassa diamonds during M Valéry Giscard d'Estaing's

presidency. Many on the newspaper felt that the editor-in-chief then, M Jacques Fauvet, had allowed the investigation into presents that M Giscard had allegedly received to degenerate into a vendetta.

Le Monde - independent in tone but sympathetic to President Mitterrand - was for long reluctant to criticise the left.

It was Le Monde that broke the story a week ago that two DGSE agents had sunk the Greenpeace boat. Since then there has been a rush on the news stands in Paris every afternoon to see what fresh disclosures Le Monde has to bring. It has a role in French political and economic life for which there is no equivalent in the Anglo-Saxon press - of being used both by the Government and companies as a vehicle for "planted" leaks and of maintaining an independent reputation.

The weekly, a mixture of a U.S.-style news magazine and an English colour supplement, is part of Sir James Goldsmith's stable. It has consistently been in the fore in reporting the Greenpeace affair - the first to disclose the identity of Dominique Prieur, the female member of the "Turenge" couple now under arrest in New Zealand.

Imperial sells Johnson

Continued from Page 1

sale of Howard Johnson would release resources and remove uncertainty, greatly enhancing the group's future profit and growth prospects.

For its \$235m, Prime will acquire 125 motor lodges and hotels, 195 franchised motor lodges and 379 franchised restaurants plus the Howard Johnson trade names and trademarks. It will also assume debt on these assets. The move marks a major expansion for Prime, which currently operates 63 motels with about 10,000 rooms under franchise from groups such as Ramada and Howard Johnson.

Marriott, which is one of the big-

gest and most successful U.S. hotel groups, will retain 350 Howard Johnson motels and 68 turnpike restaurants as well as the vending, manufacturing and distribution operations. Mr J.W. Marriott, the group's chief executive, said the deal "provides excellent opportunities for us to expand and strengthen our restaurant operations."

Marriott, which employs more than 140,000 people and has annual revenues of \$64m, is best known for its hotels, but has been expanding rapidly into family restaurants. Its 886 strong Big Boy chain is the second largest in the sector.

ZAMBIA COPPER INVESTMENTS LIMITED

(Incorporated in Bermuda)

RESULTS FOR THE YEAR ENDED JUNE 30, 1985

The following are the audited results of the Corporation and its subsidiaries for the year ended June 30, 1985 which should be read in conjunction with the accompanying notes.

	Notes	1985 US\$000's	1984 US\$000's
Revenues:			
Interest and other income		2,352	2,344
Expenses:			
Administration		439	478
Exchange loss	1	2,686	1,829
		2,925	2,305
(Loss) earnings before taxes		(573)	39
Foreign taxes		71	100
Loss before extraordinary items		(644)	(61)
Extraordinary items (deficit)	2	(1,194)	(1,033)
Net loss		(1,838)	(1,094)
		US cents	US cents
Loss per share:			
Before extraordinary items		(0.53)	(0.05)
Net loss		(1.50)	(0.89)

Notes:

- The exchange loss for the year ended June 30, 1985 was attributable to the effect on the assets, subject to externalisation restrictions, held in Zambia and Zimbabwe of a substantial depreciation in the values of the currencies of those countries.
- The Corporation made payments of US\$1,194,000 for the year to June 30, 1985 (1984: US\$1,033,000) under guarantees given to De Beers Consolidated Mines Limited relating to Botswana RST Limited (BRST) and BCL Limited (BCL) which are considered as irrecoverable. The Corporation had contingent liabilities of US\$10,320,000 at June 30, 1985 in respect of BRST and BCL who continue to experience serious financial difficulties.
- In view of the loss for the period and the contingent liabilities referred to above, the directors have not declared a dividend in respect of the financial year ended June 30, 1985.
- Subject to the approval of members at the forthcoming annual general meeting, the deficit on extraordinary items amounting to US\$1,194,000 has been covered by a transfer from contributed surplus.
- The Corporation's principal investment is a 27.3% interest in Zambia Consolidated Copper Mines Limited (ZCCM), whose results for the year ended March 31, 1985 are given below. For the third consecutive year no dividends have been declared by ZCCM.

	1985	1984
Copper production (tonnes)	525,811	531,021
Copper sales (tonnes)	576,115	588,356
Average copper proceeds per tonne (kwacha)	2,706	2,170
Total sale revenue (kwacha millions)	1,562	1,275
Earnings before tax (kwacha millions)	145	97
Net earnings (kwacha millions)	1	1

FINANCIAL TIMES SURVEY

Australia

From the wealth of analysis that will mark Australia's bicentenary in 1988, only one conclusion will stand unchallenged: Australia is different. At present, Mr. Bob Hawke's Labor Government is enjoying significant successes

Doing things differently

IS AUSTRALIA DIFFERENT? As 1988 approaches—the year of modern Australia's bicentenary—the annual migration south of bankers and academics, hucksters and historians keen to see Australia for themselves, will swell to great proportions.

They will tour coal mines, clatter on to oil rigs, visit cattle stations as big as Belgium, buy boomerangs, and study hedonistic Australia intently at play.

When they return to the northern hemisphere the fun will start, for they are unlikely to agree on what they have seen or what it means.

Some will be dazzled by Australia's resources—billions worth of minerals and immense tracts of land; others will see an economy seriously askew. Some will follow a paper-chase of post-colonial clues; others will discover Eurasia in the South Pacific. Some will register dismay at the Australian Aborigines' plight; others will see a tolerant and successful multicultural society.

Some will rejoice, a few may despair, but if they approach their task correctly and are not intimidated by data or analysis, they will at least conclude that Australia is different. As the American Academy of Arts and Sciences recently declared: "Australia is not a carbon copy of other modern democracies, even of those with whom it has close and continuing relations and is constantly compared."

For example, only superficially does Australia resemble Britain. The ties are still there, in humour, language,

origin. Britain is still the major source of new Australian settlers, and Australians still play cricket (though increasingly badly). Queen Elizabeth II is Queen of Australia.

Yet Australia has a federal system of government. Its major trading partner is Japan. For defence and TV programming, it looks to the U.S. To conquer a harsh environment it had to invent patterns of investment and tariff control substantially different from those of Britain. Study its social institutions—or visit a bowls club—and it is immediately clear that Australia is neither England, Scotland, Ireland nor Wales.

It is not the U.S. Nor is it Canada in the South Pacific, despite psychic ties with Westminster. For a start, Canadians live in cold-to-freezing climate, close to a powerful neighbour; most Australians live near beaches, on the rim of a

drought-prone continent whose major cities are thousands of miles from Australia's nearest non-Commonwealth neighbours, which include Indonesia, the Philippines, Thailand, Vietnam and Cambodia.

Nor should Australia be confused with contemporary New Zealand, which is only three jet hours away, yet is far smaller and more homogenous. There is a Labour Government in Wellington and a Labor one in Canberra, yet even they are not particularly similar.

In 1983, a French magazine voted Australia "country of the year" on the basis of this recommendation: "No other country, no other eldorado in the world can express or incarnate to such a point the hopes, the aspirations of the old world... Australia is perhaps the last dream of the decade, the end of the voyage, certainly the last frontier."

Far more carefully, the American Academy of Arts and Sciences maintains that Australia is worth pondering, less because it is exotic than because it is different. This has always been so. It was true in the 19th century, when gold-rush and wool-boom made it exceedingly prosperous at a time when many other countries—now wealthy—were not so at all.

In the 20th century, however, Australia has slipped down the ladder. It has declined as a trading power, and has invested only scantily in new technology and industry restructuring,

though this is changing. It has only recently joined the commonwealth financial world by floating its dollar, freeing foreign exchange, and deciding to welcome foreign banks.

Australia still gets excited when tourists arrive. Because of "import replacement" (now a fading philosophy) it makes a broad range of textiles, clothes, and consumer goods, yet "fully imported" is a potent sales phrase. Only recently has it made serious attempts to counter youth unemployment.

Sir Gordon Jackson, formerly of CSR, the sugar-to-oli concern, and now chairman of the Australian Industry Development Corporation, says, succinctly: "Because Australians place a high value on leisure,

they have to some extent chosen increased leisure in place of higher income."

He quotes a former Australian ambassador to UNESCO, who described Australia as a "pagan country" of sun-and-beach worshippers. Says Sir Gordon: "While this may be true, there is today a growing concern that Australia may not be realising its full economic potential."

Even here, Australia is out of synch with the rest of the world and different. Mr. Bob Hawke, its Labor Prime Minister who won power in March 1983, says that the former Liberal-National Party Government of Mr. Malcolm Fraser used Australia as a laboratory for testing monetarism before

it was experimented with by the Thatcher or Reagan Governments.

Mr. Hawke has changed all that. To a degree that is unique, Australia is at present pursuing a tripartite course based on "conciliation" and "consensus." Its keystone is the pay and prices pact between Labor and labour; between Mr. Hawke's two-and-a-half-year-old Government and the Australian Council of Trade Unions, of which Mr. Hawke was formerly president.

To an extent that was never predicted, the accord has calmed the country's industrial temper and yielded positive results. Mr. Paul Keating, the Labor Treasurer (finance minister), says the accord has played

a dominant role in restoring growth, creating jobs, reducing inflation to a level not seen for a decade, and enabling Labor to pursue its social priorities.

Moreover, this month the unions formally ratified extension of the accord for another two years, and said they had reached a "wages accommodation" with the Government to help counter the inflationary effects of this year's sharp depreciation of the Australian dollar.

By coincidence, news that the accord had been successfully extended came only days after the emergence of a tough new Opposition leader, Mr. John

Mr. Bob Hawke (left), Australia's Labor Prime Minister, faces a tough new Opposition leader in Mr. John Howard (right), who was Treasurer in the Fraser Government

A steely opponent for Labor and Mr. Hawke

BY MICHAEL THOMPSON-NOEL

This month's appearance of a new Opposition leader, John Howard, has radicalised political debate, and marks the birth of a far tougher stand against the Government and its policies.

MR BOB HAWKE, the Australian Prime Minister, must wish that 1985 had never been visited on him. Little Mr. Hawke has suffered grievous slings and arrows, if not with Jeb-like patience. All year (or so it seems), he has glowered in Canberra, the prisoner of vicissitudes, while his popularity rating crumbled.

Few of Mr. Hawke's troubles can be attributed to anyone but himself. Nor, to date, has he had to wrestle with a detestable economy, or with the general run of problems—union bloodiness, chronic wage inflation, or the whiff of petty scandal—that occasionally lays Australia's leaders low.

As a result of this year's events, Mr. Hawke's political standing is now in marked contrast to that of the ebullient, cocksure, almost messianic figure that strode the political stage just 11 months ago, and whose reign as larceny-king appeared so secure that Mr. Hawke and his Labor Party Government seemed set to rule into the 1990s.

Still delivering the goods

Mr. Hawke is still the key personality in Australian federal politics. He has talented ministers, and his Government is still delivering the goods, thanks partly—or even mainly—to Mr. Hawke's historic pay and prices accord with the Australian Council of Trade Unions (ACTU), an agreement that sealed his initial election win over Mr. Malcolm Fraser, the former Liberal leader, in March 1983.

Yet in the new political climate, Mr. Hawke is gulping for air.

The most recent event to have clouded Labor's future is the election, on September 5, of Mr. John Howard, a neo-Thatcherite (the preferred phrase "economic rationalist") as Opposition leader in place of Mr. Andrew Peacock, who succeeded Mr. Fraser.

It was a bloodless coup with elements of farce, for Mr. Peacock's intention had been to demote Mr. Howard as deputy leader for refusing to state categorically that Mr. Peacock for the leadership before the next election.

Liberal MPs rebelled. Out went Mr. Peacock (with suave grace) in a sweep Mr. Howard, a former Treasurer (finance minister) whose first act as leader was to dry out the shadow front bench by relegating "wets" and promoting hardline conservatives to three key portfolios: Mr. Jim Carlton (shadow Treasurer), Mr. Neil Brown, the new deputy Liberal leader (Employment and Industrial Relations), and

Senator Tony Messner (Finance and Taxation). The two most prominent small "L" liberals retained in the shadow cabinet were Mr. Peacock himself (Foreign Affairs) and Mr. Ian Macpherson (Communications); otherwise, the shadow front bench has been well and truly aired.

Mr. Peacock and Mr. Howard are as different as bronze and baume. Mr. Peacock is handsome and wealthy, a scion of the Melbourne Liberal Establishment who never quite jettisoned his wondrous image as the "Sunlamp Kid" of Australian politics. Finance and the economy are not his pet subjects, so that in the election campaign last December it was almost impossible to discern what the economic policies of a Peacock Government would have been.

Possibly his greatest handicap was his inability, quickly and automatically, to perceive and occupy the conservative position on specific subjects. (Against all the odds, he stood up reasonably well to Mr. Hawke in last December's election, which did not pit a flightless peacock against a sorcerer hawk, as so many had predicted.)

Mr. Howard, in utter contrast, is a product of the Sydney suburbs. He stands for middle-class, entrepreneurial and non-conformist values and is drawn from the Liberal's Edna Everage stratum. Until the eve of his topping of Mr. Peacock, the former Treasurer's nickname in Canberra was Little Johnny Howard. He is bespectacled and charismatic. He works ferociously hard and

attacking its economic record. As Mr. Howard was Treasurer in the Fraser Government he can expect equally savage treatment this time round. In 1983, Mr. Howard mocked the Fraser-Howard record by claiming that Australia had been used as a laboratory for experimenting with monetarism, something with which the Thatcher and Reagan Governments in the UK and U.S. had subsequently experimented, he claimed.

Each year, said Mr. Hawke, "budgets were more contractionary; each year, monetary policy was tightened. By 1982, Australia had one of the most contractionary fiscal stances of any western industrial country, and the highest interest rates in its history."

'Unbelievable' budget deficit

Mr. Hawke will also hark back to the row that developed immediately after Labor had taken office, when it discovered that the projected federal budget deficit for 1983-84 was apparently sweeping.

The key test for Mr. Howard will be formulation of labour market policies. The Liberal and National parties have already been pushed further to the right than they might have preferred, but if their plans for changes to deregulation, or for changes to the arbitration system, go too far (let alone if they draw too deeply on the

crowns had slipped. Early in 1985, Mr. Hawke encountered fresh problems. First there was a damaging controversy over his agreeing, and then withdrawing his agreement, to co-operate in U.S. MX missile tests in the South Pacific.

In truth, Mr. Hawke's position was hardly enviable. He is a fan of President Reagan's, and a staunch supporter of Australia's U.S. ties.

By agreeing initially that Australia would co-operate in the MX programme (in how-over junior a role), Mr. Hawke was bound to infuriate his own Left-wing. By withdrawing his agreement, he immediately triggered massive protest from the Opposition. The reason that the incident was so held against him was that it served to display such insensitivity in dealing with factional opinion within his own party as to undermine his credibility as leader.

In the wake of the MX fiasco, the Australian dollar started a rapid descent against its U.S. counterpart. Partly, this reflected money market fears (not well-founded) that the far Left was suddenly calling the shots over Australia's deteriorating trade performance.

Whatever the cause, a graph was produced to show the A\$ rate slipping and sliding in almost perfect concert with Mr. Hawke's own popularity ratings. On graph paper that superficially laid the blame for the A\$'s plight solely on Mr. Hawke's shoulders.

Bold plan for tax reform

In June, there were at last signs that Labor was salting forth once more when Mr. Hawke produced a bold plan for tax reform. It seemed conceivable that Labor would do for tax reform what it had already done for deregulation of the financial and banking markets. It was not to be. At a "tax summit" in Canberra, the Government was forced to back away from plans for a broad-ranging consumption tax with which to fund across-the-board reductions in personal income tax rates.

In many ways, Mr. Hawke's Labor Government has proved a tonic for Australia. After the divisiveness and sterility of the Fraser years, it has cast oil on troubled waters. Its pay accord has been successful. It has not been shackled by ideology, so that ironically its main accomplishments to date have been in banking and finance, even though it claims to have implemented the social priorities of the Labor Party with vigour.

"We have introduced Medicare," said Mr. Keating on budget night, "we have substantially lifted social security payments, we have increased spending on education, public housing and home purchase assistance, and we have funded the community employment programme. In our first two-and-a-half years we have achieved a great deal."

Despite all that, a question mark remains as to whether Mr. Hawke can revitalise his troops, and reassert his own authority, in time for the next election. He remains what he has been for most of his years in public life: a complex and eventually enigmatic man who used to like to flirt with self-destruction. Nevertheless, he still has the opportunity to resign into the 1990s and mould the "fairer" Australia of which he is always talking.

As president of the ACTU, he used to receive letters describing him as "a kind of Messiah." The saving grace for our country, and the hope of Australia," as Prime Minister, he must wish that 1985 was swiftly over. At Christmas, Hawke's Comet will be brightly visible in Australia. Perhaps Mr. Hawke's fortunes will change for the better.

Navigator

The merchants who pioneered trade routes to the East faced many unknowns. Today, successful navigation in Asian waters still demands patience, skill and local knowledge.

HongkongBank has acquired such expertise through more than a century of service in the development of Asian trade and commerce.

This expertise has also provided the momentum for the Bank's expansion into one of the world's largest

international banking groups, with more than 1,000 offices in 55 countries.

Such capability allows HongkongBank to respond to your banking needs quickly and effectively, in Asia and around the world.

HongkongBank will give you access to a range of financial services which will help you chart a continuous course to success.

Write to us now at our Sydney Representative Office, 19/F., Exchange Centre, 20 Bond Street, Sydney NSW 2000, Australia. Or our London Office, 99 Bishopsgate, London EC2P 2LA, or contact us at any of our offices in Edinburgh, Leeds or Manchester.

CONSOLIDATED ASSETS AT 31 DECEMBER 1984 EXCEED US\$61 BILLION.

MAGNET GROUP LIMITED

— The new Resource Investment House

Magnet Group Limited has changed the nature of its operations to become a major equity holder in Australian corporations. Some elements of its current portfolio are shown below.

MINERALS

Gem Exploration & Minerals Limited

Gem Exploration & Minerals Limited has been exploring for many years for diamonds in the East Kimberley region of Western Australia. Freeport Bow River Properties Inc., a subsidiary of Freeport Inc., U.S.A., are the co-venturers in the Bow River programme of which Gem has a 20% interest.

During the 1982 field season encouraging diamond recoveries were made. The 1983/84 programme also yielded promising results from a follow-up bulk sampling programme with 398.1 carats of diamonds being recovered. The 1984/85 exploration programme significantly upgraded the exploration area with the recovery of 1,430 carats at a grade of 67 carats per tonne with a significant percentage of gem stones. A mobile production plant has been located on the deposit for the 1985/86 field season. It is anticipated that if the satisfactory results continue, a large scale production operation will be established during 1986.

Magnet Group Limited owns 5,709,917 shares in Gem and both companies have common directors.

MONARCH PETROLEUM N.L.

Monarch Petroleum N.L. has an interest in the onshore Tubridgi gas field in Western Australia. The oil discoveries at North Herald, South Pepper and Chervil are located about 80 kilometres to the north. In addition the company holds an interest in the Gilmore gas field in Central Queensland.

Offshore the company has a substantial interest in the Talsman 33 P in Western Australia. During 1984 the Talsman No. 1 well was drilled in the adjoining permit and located some 6.5 kilometres away. Talsman flowed at a rate of 4,778 barrels per day through a 1" surface choke. Following a detailed seismic survey it is planned to drill a well during early 1986.

Monarch also has significant interests in gold and mineral exploration areas in Western Australia. Most of these areas are subject to joint venture agreements under which Monarch is not obliged to contribute to expenditure.

Magnet Group Limited owns 31,464,003 shares in Monarch Petroleum N.L. and both companies have common directors.

OIL & GAS

Lennard Oil N.L.

Lennard Oil N.L. has substantial holdings in the Eromanga/Adavale and Cooper Basins in Central Queensland where discoveries of oil and gas have been made. Lennard was a participant in the Tintabura No. 1 discovery well which flowed oil at approximately 1,600 barrels per day during December, 1983. Appraisal drilling of this discovery has continued and it will be in production during 1985. Exploration of further targets in the area of Tintabura have resulted in further oil discoveries in Talgoberry, Koorooopa and Minedilla.

In addition Lennard is the largest holder in the permit containing the Gilmore Gas Field. The field was discovered during 1985 but to date has remained undeveloped. Total proven reserves are in the order of 32 billion cubic feet whilst the potential of the field could be as large as 200 billion cubic feet. Exploration during 1985 will be aimed at determining whether or not liquid hydrocarbons are present in the permit. There is some evidence of this from previous drilling and it is possible that there may be a previously undetected oil field overlying Gilmore. Discussions with a potential gas consumer are presently underway.

Permit NTP 28 lies offshore in the Bonaparte Gulf, Northern Territory and contains the giant Petrol Gas Field. Estimated recoverable reserves in Petrol are in the order of 5 trillion cubic feet. As the field may have an area of about 500 square kilometres, further delineation drilling is needed. Reserves may prove to be larger than present estimates.

Magnet Group Limited owns 26,850,014 shares in Lennard Oil N.L. and both companies have common directors.

OTHER INVESTMENTS

HUGALL & HOLLE LIMITED

The company also has significant investments in companies listed on The Second Board Market of the Stock Exchange of Perth Limited. Hugall & Holle Limited specialises in the supply and installation of irrigation equipment for both domestic and agricultural purposes.

NEUTRONIX LIMITED

Neutronix Limited has completed the research on an advanced underwater acoustic tracking system with the registered name of ACUTRAK. A prototype is being built and its feasibility has been proven through theoretical analysis and extensive computer simulations.

Unions claim that the State Premier is 'thundering towards full-scale confrontation with the Federal Government'

Nation awaits outcome of clash with unions

Queensland
LARRY KLINGER

THE QUEENSLAND Government has the unions on the run. While the fight is not over, state Premier Joh Bjelke-Petersen has won the latest round, which could be the hundredth or thousandth depending on how one cares to segment Sir Joh's lifelong battle to curtail trade union power.

The confrontation — which centres on Sir Joh's refusing to reinstate the 900 electricity workers he sacked, unless they signed a no-strike agreement — is being closely monitored by governments, industry and the trade union movement across the Australian continent.

The final decision, should there be one, could affect the political and economic course of the nation.

The Australian Council of Trade Unions (ACTU) says that Sir Joh is "thundering toward a full-scale confrontation with the federal Government. Every Australian trade unionist will be affected if the assault on Queensland workers is allowed to succeed."

Industry executives privately support the Queensland Government but, for the most part, mute their public statements. This is primarily because of an understandable fear of antagonising their own workers. It is also because that, while the majority would like to see some deregulation of the country's unions, they are concerned that a complete scrapping of the national system of compulsory wage arbitration might bring a chaos beneficial to no one.

Mr John Howard, when this month spectacularly unseated Mr Andrew Peacock as leader of the national opposition Liberal Party, made the question of union power the centrepiece of his first policy statement. He said that the public's reaction to the Queensland situation had shown two things. It was not against mainstream unionism but that it had con-

siderable scorn for excesses of union power. He said he wanted to "open up our very rigid labour market" to allow small business the possible economic advantage of opting out of the arbitration system.

Mr Bob Hawke, the Prime Minister and former leader of the ACTU, has so far managed to remain aloof from the affair, confining himself, probably wisely, to surveying the ground before making a move into the Queensland minefield. He has confined his statements to defending the union movement generally.

Sir Joh says: "We are changing the whole attitude on this closed-shop business."

He had just had a breakfast meeting. "There were 30 top businessmen there, and they were very supportive and approved of government policy. They said they hope I'll stay on forever."

Sir Joh, 74, has been Premier for 17 years.

Pressing on
He has no intention to retire but is convinced that the Labor Government in Canberra will not be there much longer. My impression is that the new Government of the Liberal Party and National Party (his own) will bring in new legislation on unions. We have shown them that it can be done."

Mr Howard may well be correct in his assessment of public reaction, for there is no doubt that Sir Joh has widespread support for taking on the workers in the state's electricity distribution network, whose labour relations have been in turmoil since the late 1970s.

This culminated in widespread blackouts this year in protest against the authority's plans to hire casual labour at peak periods as a cost-saving measure. The union regarded this as a direct threat, despite the offer of full negotiations and assurances of guaranteed employment and that no one would be sacked.

Joh's stand is obviously still good for votes, a senior opposition MP grudgingly admitted.

"The National Party is out there every week, polling the people. Obviously, they are not coming back and saying things have changed, or Joh would be changing, at least a bit."

However, whereas the Government portrays itself as the innocent party and the situation as simply the inevitable outcome of having to deal with union thuggery, many community leaders in politics and business, as well as the unions, feel the consequences of the handling of the dispute could be disastrous for the state's economy.

The dispute, the sackings and the subsequent union disruption in protest, has cost industry many hundreds of millions of dollars, and some business leaders, fearful that continued confrontation could cost them more, have instigated secret mediation talks with the unions, who, in turn, are worried that even more jobs could be lost in a state with the highest unemployment in the country.

It has not slipped past any one's notice that the national prices and wages accord between the Hawke Government and unions, which Sir Joh refused to endorse, has resulted in a phenomenal reduction of days lost due to industrial disputes across the country. In Queensland, the figure has more than doubled.

Mr Nev Warburton, Leader of the Queensland Opposition, and a former long-serving executive of the Electrical Trades Union, believes that Sir Joh has virtually destroyed industry's relations with labour in the state at a time when its economy is slipping dangerously deeper into recession.

The economic performance of Queensland is often difficult to discern, as the state's various political groupings and organisations bandy about selected statistics attached to personal interpretations rarely agreed by others. For instance, the Government consistently speaks in terms of new jobs created rather than the rate of unemployment in a fast growing population.

However, the central Australian Bureau of Statistics, whose figures are sometimes questioned, indicates that Queensland's economy is continuing to fall behind the rest of the country in most key areas.

Meanwhile, Sir Joh has sacked the electricity workers, hired replacements and maintains he has no intention of changing course. He has brought in legislation outlawing strikes in the power industry, and has let it be known as an explicit threat that his Government has already drafted further legislation to further control union activities.

Reflections
Union leaders, while maintaining that decisive action on their part is suspended only because they have recently obtained access to federal mediation in the dispute, privately concede there is little else they can do. Their recent attempts to shut down public services in the state failed dismally.

They believe that a general strike could only be sustained for a day — and that the day after it would already begin to visibly crumble.

Mr Warburton reflects sadly that "I would never have thought I would see the day when there were men ready to take the jobs of people in distress. But that seems to be the economic situation in Queensland, if not in world at large."

Mr Warburton says he is endeavouring, with the support of the unions, to convince Sir Joh that his assessment is wrong, that it is not economic

Miners at work in Queensland. The unions' position is weakened by the state's jobless figures, the highest of any state in the country

A major review is under way of Australia's long-term defence environment and strategies

Moves to maintain key role in the Pacific

WHEN KIRIBATI, a group of about 30 tiny islands in the mid-Pacific, granted fishing rights to the Soviet Union last month, Australia was dejected. Together with its defence ally, the U.S., Australia had tried to prevent the signing of the agreement. Occurring at a time when the Western alliance was still adjusting to the shock of New Zealand's ban on visits by American nuclear-powered or armed ships, the Kiribati episode was yet another reminder of Australia's important role in maintaining balance in the Pacific between the West and the Soviet Union.

It is in Australia's interest to work actively for maintenance of the status quo in the Pacific. After all, it has been the balance and stability in the region, plus Australia's geographic location, that have prevented any short- or medium-range threat to the country's own security.

Australia does recognise the need to maintain the Pacific balance. This was manifested in last month's South Pacific Forum in the Cook Islands, where Mr Bob Hawke, the Australian Prime Minister, pushed successfully for the adoption of a limited Nuclear-Free Zone Treaty.

Mr Hawke saw the treaty as necessary to keeping ANZUS afloat in the Pacific amidst threats of New Zealand becoming a sleeping partner.

An important clause in the treaty guarantees freedom of passage of nuclear-armed or powered ships within the area. However, it leaves it to each signatory to determine whether it would allow such ships access to its ports. New Zealand was a signatory to the treaty, which meant that despite the ban on visits, U.S. nuclear ships can continue passing through New Zealand's territorial waters.

As to the Kiribati episode, the long-term implications for Australia are hard to judge. Some Australian strategists are concerned that the Kiribati contract, under which the Soviet Union is to pay A\$2.4m annually for fishing rights, could establish a trend among the marine-resource-rich but cash-poor Pacific nations. This

could give the Soviet Union a chance to establish a foothold in the region.

However, there is a stronger belief that Australia herself does not face any threat of any substance in the foreseeable future.

Nevertheless, fear of the Soviet Union is latent. It will therefore not be surprising that in the current major review of Australia's long-term defence environment and strategies, such factors as New Zealand's stance against U.S. nuclear ships, and the Soviet Union's interests in Kiribati, may very well be taken into account.

Defence and foreign policy

EMILIA TAGAZA

The defence review, being conducted by Mr Paul Dibb of the Strategic and Defence Studies Centre, is expected to take more than a year. It will define Australia's strategic environment, its defence priorities and armed forces structure.

The review was initiated by the Defence Minister, Mr Kim Beazley, who had admitted the lack of any overall strategy in Australia's defence policy. There have been continuing but inconclusive discussions of defence issues since Australia's involvement in the Vietnam war, but all through these years, the country has remained undecided as to what defence capability it should aim for.

For example, some experts doubt the wisdom of the decision to buy 12 destroyers, arguing that Australia would be better off with fewer destroyers and more patrol boats, given that there are no foreseeable threats. In times of peace, the country's major problems are illegal fishing and illegal immigration, but most especially drug smuggling. The Navy has a useful role to play in dealing with these problems, and with more patrol boats could cover

a wider area.

Major Gen J. D. Stevenson, a senior retired Army officer, had also made public his doubts about the recent order for 75 FA/18 Hornet fighter planes from McDonnell Douglas. Writing in the Pacific Defence Report, he said that the Government seemed to have overlooked that it is also a priority to acquire some early warning aircraft, and that an air defence element of 30 FA/18s would have been sufficient.

Last year, spending on capital equipment accounted for about 25 per cent of the overall defence budget. Three to four years ago, it accounted for only a sixth of the defence allocation.

The trade-off has been manpower and training. Because of the squeeze on the manpower budget, there have been substantial cutbacks in defence personnel. For this year, the defence allocation has been increased by 3 per cent in real terms, but this is deemed inadequate if the armed forces are to maintain proper training.

Mr Beazley wants local industry to benefit from the recent depreciation of the local dollar and is therefore more than ever keen on greater Australian participation in equipment acquisition. In most of recent purchases, Mr Beazley had ensured that Australian companies were able to participate in the production or assembly stages.

Last month, the defence ministry awarded contracts worth A\$25m to two European groups to develop a design for a new-generation submarine for the Australian Navy. The groups were Kockums, the Swedish state-owned shipbuilder, and Howaldtswerke Deutsche Werft (HDW) of Germany. The ministry has decided that all six new submarines, worth about A\$2.6bn, will be fully built in Australia, so that Australian industry can participate to the maximum practical extent.

In anticipation of winning the final building contract, the two European groups have formed joint ventures with local firms.

AUSTRALIA 4

Back in business again

BY MICHAEL THOMPSON-NOEL

THESE DAYS, INVESTING IN AUSTRALIA IS CONDUCTED WITH A LITTLE MORE DECORUM.

One hundred years ago, the House of Were was in its forty-fifth year of successful trading.

Two years later, shares in the young Broken Hill Proprietary Company were being traded by Were's on a hysterical Melbourne Stock Exchange.

Records show that over the Christmas period in 1887, J.B. Were & Son's staff worked frantically, often far into the night, the fever of speculation having affected every stratum of society.

In a single day, 20th January, 1888, operations exceeded £2,000,000 on 'Change, mostly in BHP shares.

And now, J.B. Were & Son's interests and influence cover many areas of corporate and institutional investment, with offices around the world.

But even though the circumstances have changed, the excitement of trading, and the satisfaction of wise investment decisions will always suffice the spirit of the House of Were.

It's what makes J.B. Were & Son one of Australia's great investment houses.

J.B. Were & Son
Limited
180 Old South Creek Rd, B22
P.O. Box 110, Warragul, VIC 3920
Phone: (043) 540 2361, Telex: 965401 J.

'Australia is back in business,' declared Treasurer Paul Keating, recently. Labor, he claims, has turned the economy around from deep recession to a rate of growth which is one of the fastest in the western world.

ANYONE KEEN to test the temper of the industrial relations scene in Australia could have done worse than visit Sydney Town Hall earlier this month where the Australian Council of Trade Unions (ACTU) was holding its biennial congress.

Periodically, Australians are portrayed as some of the world's most pampered, most bloodminded workers—a reputation that in turbulent times they are apt to foster with round robin strikes and aggressive wage claims.

Yet this month's congress passed virtually without incident. There sat the delegates, tame as cats, with hardly a whinge between them.

The week's most notable event was the ACTU's formal endorsement of a two-year extension of the pay and prices accord between the unions and Mr Bob Hawke's Labor Government—an historic document that has contributed greatly to Labor's economic successes thus far.

The durability of the accord has been freely speculated on ever since Mr Hawke unveiled it during his campaign for the March, 1983, general election. Yet the accord has run for 30 months, and shows no signs of bucking.

Quite the reverse, if one studies what each side has to say about it. In the view of the ACTU, the accord's benefits "have encompassed high economic and employment growth, substantially reduced unemployment and inflation, improved

international competitiveness, the maintenance of living standards through full wage indexation and tax reform, and improvements to living standards through the 'social wage'.

In the ACTU's view, the accord has helped combat inflation and unemployment simultaneously, and is thus "manifestly preferable to the contractionary policies pursued by the former (Fraser) Government as part of its failed 'fight inflation first' strategy."

The Treasurer (finance minister), Mr Paul Keating, is even quicker to harp on the story of the accord, and the Government's successes, as he did in his budget speech on August 20, when he roundly declared: "Australia is back in business."

That night, in Canberra, he told MPs that Labor had "turned the economy around from deep recession to a rate of growth which is one of the fastest in the western world."

Mr Keating explained that: "Labor had generated 410,000 new jobs, and cut unemploy-

ment from a peak of 10.4 per cent to 8.2 per cent; "Inflation had been reduced to levels not seen for a decade; "Social priorities had been pursued with vigour; "The projected federal budget deficit was being cut from \$36.7bn in 1984-85 to \$24.9bn (\$2.5bn) in 1985-86, representing 2.1 per cent of forecast gross domestic product, against 3.3 per cent in 1984-85, and 4.3 per cent in 1983-84; "Non-farm activity in 1985-86 was expected to grow at about the same 5 per cent rate as last year, with overall economic growth of about 4.5 per cent, and "Budget outlays in 1985-86 were expected to total just under \$599.1bn—a projected increase, in real terms, of only 1.3 per cent.

However, there can be no silver linings, without clouds. The main concern at present is of a sharp surge in inflation, stemming from this year's marked depreciation of the local dollar.

During 1984-85 (July-June) the \$ fell by 22.7 per cent against the mark, 19.5 per cent against sterling and 19 per cent against the yen. On a trade-weighted basis the \$'s fall was 17.9 per cent.

In its Budget Paper No. 1, the Government describes the \$'s fall in these terms: "In the first three weeks of February the \$ weakened as the US\$ rose through successive record highs against major currencies."

Local factors also contributed. In particular, foreign exchange markets were unsettled by uncertainty about monetary conditions (aggravated by public servants' bans on the encashment of Government receipts), and by Australia's widening current account deficit and increasing external indebtedness. Perceptions of the implications of some political decisions added to the uncertainty."

(One of these decisions was Mr Hawke's U-turn on co-operating with U.S. MX missile tests in the South Pacific, but Paper No. 1 steers clear of such shoals.)

As a result of the dollar's depreciation, the Government expects Australia's consumer price index to rise by about 8 per cent between June, 1985 and June, 1986, against a rise of 6.7 per cent in the year to June 1985. Australia's inflation rate in 1985-86 will thus again exceed that recorded by many of its main trading partners.

The challenge, says Mr Keating, is to ensure that this "one-off increase" is not built into the underlying rate of inflation. This is vital, because the ACTU-Labor pay accord seeks to maintain real wages by linking wage rises directly to gains in the CPI (something the employers naturally dislike). The accord's package of related proposals covers employment, industry development, social security and education, taxation, and industrial relations, including occupational health and safety.

The Government-ACTU solution for countering the impact of the dollar's depreciation is an ingenious one. The current six-monthly wage claim of 3.8 per cent is expected to be endorsed by the Arbitration Commission, but the ACTU has agreed to a reduction of two percentage points in its settlement next April, in return for tax cuts next September. Tax reform and improved pension arrangements also enter the equation, as does increased price surveillance.

The employers were swift to voice objection to the agreement, claiming that it would fuel—not stifle—inflation, while the Liberal Party, its spine stiffened by a tough new leader, Mr John Howard, echoed the

employees. However, this drew a sharp rebuke from the Employment Minister, Mr Ralph Willis, who said this month: "We have the extreme irony in Australia at present that after two years of responsible behaviour, with overwhelming adherence to the accord and record low levels of industrial disputes, the conservative political parties are doing all in their power to generate hysteria about excessive union power."

There is still concern on the trade front, despite a lowering in August of the monthly trade deficit to \$55m (\$22m), down \$434m on July's record trade deficit (a figure inflated by purchases of aircraft, and a satellite). In 1984-85, the current account deficit was swollen from \$47.4bn to \$10.2bn.

For the first two months of Australia's 1985-86 financial year, the trade deficit totalled \$544m, against \$807m last year, while the current account deficit for the first two months was a shade higher at \$52.2bn.

Australia has traditionally run a current account deficit. In the 1980s, however, the deficit averaged 4.5 per cent of gdp in the period to 1983-84, compared with 2.5 per cent in the previous 20 years.

Imports rose by 23 per cent in value in 1984-85. Exports

of domestic demand contributed to this growth, but it also reflected past competitive weakness, and technological and structural changes requiring the import of goods not widely made in Australia, such as data processing machines.

Export receipts increased by 25 per cent. After improving in 1983-84, Australia's terms of trade deteriorated in 1984-85.

In Budget Paper No. 1, the Government states squarely: "Concern about international indebtedness should recede as a consequence of a smaller current account deficit." Later, it skims across a minefield with this careful statement: "Lifting the achievable growth potential of the Australian economy requires that resources be progressively shifted away from the less efficient and more highly protected sectors. Over time, this approach will contribute to a more dynamic and outward-looking private sector which will be capable of successfully adapting in what will, no doubt, be a world characterised by continuing structural change."

That is a statement that begs more questions than Labor will have time to answer, despite the important successes achieved by its pay pact with the unions.

Personality profile: Paul Keating, Australia's lively Treasurer

Top of the pops with business world

An image of gleaming self-confidence: not for nothing is Paul Keating regarded as the most ambitious man in Australian politics.

FOR a portrait of bravura self-confidence, nothing in Australia in the past ten months competes with the appearance of Mr Paul Keating, the Australian Treasurer (finance minister), at Canberra's Parliament House on the night of August 26.

It was just before 8 pm. In a few minutes the Treasurer would start his budget speech, in which he would announce a major cut in the federal budget deficit and maintain that the Hawke Labor Government had "turned" the economy around from deep recession to a rate of growth which is one of the fastest in the Western world.

First, however, he was happy to answer reporters' questions, which he did with ease—so much ease, I thought to myself, that despite the occasion, the hour, and the clutter of mikes, there was a

perceptible chance he would fall asleep.

No one need have worried. Exactly on eight he flicked his cuffs, his farewell to his pallid inquisitors, and bounded off to the House of Representatives, where at the end of his speech he told the Speaker that the third Keating budget was a budget for growth: "A budget for a fairer Australia."

Unwavering self-confidence is the Keating hallmark. After all, he already has a clutch of credits to his name—fostering the AS, liberalising foreign exchange, freeing the financial markets, welcoming in a host of foreign banks, and presiding over a period of robust recovery in the Australian economy.

What seemed curious about Mr Keating's gleaming self-confidence on budget night were the events seven days previously, when he and the

Government had finally backed away from their biggest initiative: sweeping reforms of Australia's decaying tax system.

In June, a White Paper (Reform of the Australian Tax System) made a cogent case for radical re-ordering. The main initiatives the Government proposed included the introduction of a broad-based consumption tax, similar to VAT; reductions in marginal income tax rates; and a widening of the direct income tax base via introduction of a modest capital gains tax, a tax on gold mining, a system of national identity numbers to help curb tax evasion, a war on "larks and perks" (fringe benefits), etc.

It was very good stuff. In July, Prime Minister Hawke hosted a "tax summit" in Canberra which rapidly became a shambles. The unions,

the business groups, and other interested parties objected to this and that (particularly to the planned broadening of indirect taxes), so that the Keating "tax cart," in which the Treasurer had planned to ride in triumph, was left without wheels.

On August 13, the Government effectively abandoned the major elements of its tax reform plan in a move widely interpreted as the biggest reversal of Mr Keating's career, given the energy with which he had flailed the horses dragging the cart.

On June 4 the Treasurer had said: "If we don't as a nation adopt this proposal, then you won't see significant reform in this country in taxation for the balance of this century"—a gothic reminder that for all its vices, Australia remains one of the

most deeply conservative democracies on earth. (Even New Zealand is pushing ahead with major tax reform, which must make Mr Keating want to weep.)

Although the dumping of ambitious tax reforms was widely described as Mr Keating's biggest political blow, there was a general tendency to pin more than half the blame on Mr Hawke.

For this reason, it is unlikely that Mr Keating's chances for the Labor leadership will be harmed in the longer run, should he stay in Parliament.

There seems scant chance of a leadership struggle before the next general election. Whatever his mistakes so far this year, Mr Hawke has yet to lose an election. However, if Labor goes, Mr Hawke will probably go as leader, leaving the road clear for a Keating challenge. Not

for nothing is he regarded as the most ambitious man in Australian politics.

Mr Keating entered Parliament in 1983. He served briefly as a minister in the Whitlam Government. These came the long years of opposition.

Despite the tax fiasco, his standing remains extraordinarily strong with finance and business. Recently, at 32,000 feet, in a tiny corporate jet somewhere over Australia, I asked a mining magnate what he thought of the Australian Treasurer.

He jiggled his champagne glass and said: "Little Johnny Howard (the former Shadow Treasurer) has got a pretty good act, but there's no-one quite like Keating. He's bloody good."

Michael Thompson-Noel

The pace of change accelerates

Banking and finance

LACHLAN DRUMMOND

CHANGE is the one constant for the Australian banking and finance sector and with the proposed 16 new entrants paving the ground in anticipation of final licensing, the pace of change is poised to accelerate still further.

But even without this new bank landmark in the Australian financial sector, the general thrust to deregulation has left the participants with much to ponder in defining strategies to ensure survival, and then growth, in a redefined and more competitive market.

Already, it can be argued that Australia is over-banked, with four nationally operating trading/savings banks groups—the ANZ, Commonwealth, National and Westpac—four state banks operating within colonial borders in NSW, Victoria, South Australia and Western Australia—three small private trading banks—Macquarie, Australian and Bank of Queensland—two savings banks in Tasmania and in NSW, a building society which recently moved to savings bank status. Furthermore, two foreign banks, Bank of New Zealand and Banque Nationale de Paris, have long-operated as branches in Australia.

Corporate field

On top of this, in the corporate field more than 100 merchant banks and representative offices are seeking business while, in the consumer finance field, there are close to 50 building societies with assets ranging from A\$2.5bn to A\$130m and the same number of regional credit unions with assets from A\$40 to A\$150m.

The finance company sector provides another 30 or so competitors across the broad spectrum from consumer to commercial finance, with assets ranging from a little more than A\$6bn down to about A\$200m. Sixteen new banks on top—17 with the separate issue of the Bank of China—immediately suggests indignation, but for the main part the "new" banks will be translated from existing merchant bank finance company or representative office operations.

Furthermore, there is a general expectation that of the "new" 16, only about five will

offer strong competition across the full spectrum, with a broader group of seven or eight with a more modest consumer/corporate spread or a concentration on wholesale or specialist trade finance.

The first group is expected to be taken up by Chase-AMP, the joint venture between the U.S. group and Australia's largest mutual life insurance operator, Clico, with its extensive existing operations; National Mutual Royal Bank, the joint venture between the number two institution and the Canadian Royal Bank; Barclays of the UK with its spread of local operations; and BA Australia, the 75-25 venture between Bank of America and Australia's dominant retailer, Coles Myer.

The second group would include J. P. Morgan, Bankers Trust, National Westminster, Lloyds (via New Zealand), Bank of Tokyo, Hong Kong and Shanghai and Standard Chartered.

The third group of smaller operators would cover the Industrial Bank of Japan, Mitsubishi Bank, Deutsche Bank and Overseas-Chinese of Singapore, although Mitsubishi's ambitions could shift it up the scale quite rapidly. At the end of 1984, the merchant bank and finance company operations of the new participants—including both local and overseas partners—totalled around A\$12bn out of a total A\$170bn or so of assets for the banking, merchant banking and finance company sectors at the time.

In a recent survey, conducted by Mr Brian Metcalfe, a Canadian academic, the 16 new banks were projecting they would command a collective 20 per cent share of banking business after five years.

In the same survey most of the proposed banks had scaled back their initial profit estimates from projections made at the time of lodging applications, mostly because about 10 banks more than were expected were selected and that the Reserve Bank regulators have imposed restrictive covenants on capital and liquidity for the initial years.

The Reserve has imposed a capital requirement of 6.5 per cent of total assets, which will leave shareholders funds geared at a shade over 14 times compared with around 20 times for the existing banks, which leaves a competitive advantage for the local banks with their ability to shave margins while, comparatively, not sacrificing profit ability.

The Reserve and the proposed new banks have also locked horns on infrastructure and regulatory issues, mainly on the Reserve's view that holding companies are not interposed between the offshore parent and the local bank and that all domestic offshoots be owned by the local bank itself.

This stance, in some cases, conflicts with the ultimate foreign bank regulators of the newcomers and in others with the preferred corporate approach. A compromise of interposed holding companies and one domestic roof appears to be emerging.

Meanwhile, with the prospect of impending change the Australian banking and finance sector has been rapidly adjusting ahead of time to meet the new competition.

The ambitions to either retain market share, or for new entrants to build share ahead of licensing, meanwhile has provided a pointer to the future level of competition and a boom to borrowers—with lending margins driven to wafer thin levels.

The local banks have also moved to take advantage of deregulation already in place, most of which has favoured the banks and has seen the removal of almost all controls on credit and lending rates and maturities.

The result was a 20.4 per cent increase in deposits for the four big banks in the year to June 30 last and a 23.2 per cent increase in their lending after they entered the formerly restricted preserve of the merchant banks, the overnight and short term money markets, and then pushed the funds out to clients.

Varied response

The response of each of the banks has differed, with the National Australia Bank the most aggressive asset builder, closely followed by Westpac, with the ANZ taking a more relaxed domestic approach as it has sought to counter the emerging competitive thrust through expansion offshore after its 1984 takeover of Grindlays.

The other banks, too, including the increasingly aggressive and mutually Co-operative State banks have sought growth in overseas markets, building up loan books in London and the U.S. and establishing branches in Japan and through south east Asia.

Westpac and the National are each close to establishing life insurance operations to extend the range of financial services at a time when the big mutual life insurers are extending into the banking domain.

The effect on the earnings of the big private banks of operating in a free environment but without the new competitors has been great, with the National and Westpac finally winning the benefits of their early 1980s mergers but with advances at the ANZ performance clogged by Grindlays. The three private banks are disproportionately profitable in international terms, ranking between 68 and 104 in assets but from 29 to about 50 in profits.

For the current September year, Westpac is expected to be up 22 per cent to about A\$80m net after a 38 per cent increase in the previous year and is targeted by brokers for a 5-10 per cent rise in 1985-86. The National is projected to increase 24 per cent to A\$300m after a sharp gain in the previous year and also is pencilled in for a 5-10 per cent increase in the following year as the new domestic banks make their presence felt.

The ANZ is projected to rise from A\$28m to A\$285m-300m range with the 1985-86 outlook of A\$30m-35m, depending on how well Grindlays recovers.

The local banks are using the hiatus period to spend heavily on automated tellers and electronic banking to help drive down operating costs and increase their competitive edge.

Along the way they have been wrangling with retailers and other financial services groups on the shape and operation of electronic funds transfer systems, with the banks wanting

all transactions routed through them and the others arguing for a gateway system providing access for all.

Access to the cheque-clearing system has been another source of healthy argument with those of the new banks and other financial institutions baulking at the \$800,000 entry fee aligning themselves in agency agreements with existing banks.

The banks are also split on the future of the jointly controlled Bankcard system at a time when each is developing its own Mastercard and/or Visa-based one-card credit-debit systems to provide some level of product differentiation.

Meanwhile, in the face of these rudely healthy existing banks and the new entrants, the merchant banking sector has been expanding, with those that missed out on licence either buying out other partners in consortium operations or taking advantage of the 12-month moratorium on foreign invest-

ment guidelines, now drawing them to establish fresh money market operations in the relaxed atmosphere.

With the new and existing banks tied down with liquidity ratios—adding perhaps 0.5 to 0.75 per cent of apparent funding costs—and the costs of expansion and automation, there is a clear view that the merchant bank sector can remain competitive in funding for a number of years at least, while seeking fee-based business in the securities placement and advisory areas and specialised foreign exchange and trade finance areas.

Greatest threat

The area under greatest threat is perhaps the finance company sector, traditional providers of fixed-rate finance for consumer hire purchase and commercial leasing, the latter an area where the merchant banks have been vigorously driving down market to make

up for ground lost to the banks. At the consumer end of the market they are under assault from the savings banks, credit unions and building societies, the latter group only now gaining freedom to lend other than against secured real estate.

The financiers who are dominated by the bank-backed operators have responded by seeking to lift gearing from the traditionally accepted six to eight times shareholders' funds to a 12 to 15 times range as a means of allowing them to shave rates while retaining profitability. They have also shifted away from fixed-rate debenture borrowings to greater use of money market instruments, at the same time moving to floating rate lending.

With the first new bank, Chase AMP, expected to open its doors on September 23, all participants by this time next year in the banking and finance sector should have a clear idea of what the future holds.

In transition: the stock market and the banking industry both face radical changes as competition intensifies

The Skill of the Strategic Move

Just like Chess, success in metals and energy lies in making the right move. MIM has achieved world standing by making the right moves in developing and running large scale, low cost mining operations. This ability is the result of over sixty years' "hands on" experience which has created a widely recognised reputation for reliability and efficiency in metals and energy production.

MIM's operations range from one of the world's largest copper, lead, silver and zinc mines at Mount Isa, copper refining and transport facilities at Townsville to nickel interests in Western Australia.

In addition, MIM has rapidly become one of Australia's largest coal exporters through three great export coal mines at Newlands, Collinsville and Oak Creek in Central Queensland.

These mines are shipping at capacity through new, dedicated coal ports at Abbot Point, the most northerly coal port in Australia, and Dalrymple Bay. These ports are capable of handling vessels of 165,000 DWT and 200,000 DWT respectively.

MIM's substantial international interests include Europe's largest silver/lead refinery at Northfleet on the Thames, part ownership of zinc refining and fabricating plants in West Germany, holdings in ASARCO Incorporated, the United States based international mining and metals company, and the growing Canadian resource company, Teck Corporation.

Making the right move requires planning, skill and foresight, qualities which only knowledge and vast experience can provide.

In international mining and mineral processing MIM will stay one move ahead. MIM - the Resourceful Australian.

Strong corporate growth leads to spate of takeovers

Stock market

LACHLAN DRUMMOND

THE AUSTRALIAN share market has taken a contemplative pause, with the bulls and bears fairly evenly split on whether the 950 point level for the all ordinaries index is a high water mark or a signpost to a four figure index.

What is impossible to dispute is the strong performance of the market since it renewed its upward surge in mid-1981: a rally which has accelerated in the current calendar year.

For the 12 months from last September, the broad market indicator of the all ordinaries index, covering some 80 per cent of the market, has driven

up by almost 25 per cent from 710 to its current 940-950 range, with all but 33 points of that increase falling in 1985.

The surge has been led by the industrial segment of the market, which has risen by 31 per cent from last September by strong rising profits and heightened takeover speculation with the industrials index for long having been in previously uncharted ground and establishing new highs almost daily.

The resources market over the same period has risen by a relatively more pedestrian 21.8 per cent, with the index earthbound and at least 200 points short of its best on the back of generally uninspired commodities prices.

Meanwhile, within that general framework the market leader, Broken Hill Proprietary

Co, in the past year has risen more than 50 per cent from an adjusted A\$4.04 to in excess of A\$7 as the company's earnings have risen dramatically and as its executives have busily trotted the globe seeking backing from international investors in the face of the continued attentions of its beta potra, Mr Robert Holmes a Court, and more recently the acquisitive Adelaide Steamship group.

As it represents about 8 per cent of the total market capitalisation, BHP has been a heavy influence on the broader index measures.

Meanwhile, although given impetus by traditional fundamentals of earnings expectations, foreign influences and strong institutional liquidity, the Australian market has also benefited from a series of one off effects which have usually

arrived in time to hold the bears.

One of the biggest single influences was the collapse in the Australian dollar early in the year; a factor which has left the domestic performance looking less grand when set in U.S. dollars. But in turn it has made the Australian market look cheap for foreign investors, particularly those buying as much on a currency as a market view.

That collapse has also significantly enhanced the local currency earnings prospects of the major exporting resources group which draw sales in U.S. dollars.

At a stroke the shift in the currency has restored profitability to a largely loss-making coal sector, given a 30 per cent increase in gold prices against a steady decline in U.S. price

and added gloss to the range of generally flat to poor mineral commodity prices.

It has also bolstered the import sensitive industrial sector, which in any case has been enjoying a strong recovery in profits from the 1982-83 recession trough.

Import sensitive

The broad estimate is that the June 30 year just ended will see 20 to 25 per cent average earnings growth, with perhaps 10 to 15 per cent achievable for the current year, although there are many who believe that "high interest rates and record share price levels are incompatible."

Meanwhile, the strong corporate health has drawn out a series of massive takeovers and almost continuous speculation which has provided sub-

stantial underpinning to many share prices.

The A\$1bn plus bids for Castlemeane Toomeys and Myer and a host of other smaller offers, meanwhile have left former shareholders with additional cash to plough back into the market.

The market has also received a psychological boost from Federal Government moves — yet to be implemented — to remove the effective double taxation of dividends in the hands of individual shareholders.

In recent months the single most significant factor has been the redirection of gold investment funds from South Africa to Australia, one of three countries — along with the U.S. and Canada — where gold stocks are readily available.

With Australian gold stocks

having stood on earnings multiple of six to 10 times against the 20 to 30 common in North America, there has been a sharp upward revision in share prices, particularly as many of the gold miners are small operators with generally tightly held capital.

Turnovers

All has helped to ensure that daily turnovers around A\$100m are the norm, a factor which has helped a stockbroker industry opened only last year to negotiated commissions and to outside shareholders.

As a result of these changes close to 30 of the 104 broking firms have taken in outside shareholders from among existing banks and merchant banks.

Both local and foreign — while several smaller firms have dis-

appeared in mergers and amalgamations.

Additionally, the large Sydney and Melbourne firms — which two centres account for some 90 per cent of trade — have extended to the smaller market floors through buying interests in firms there, while the more robust of the junior centre firms have similarly extended themselves to the major trading floors through acquisition.

Meanwhile, the industry faces radical change in future with plans for electronic screen trading and a central computerised scrip settlement system.

The screen trading proposals are far from complete and have drawn a chorus of protest from brokers so far. It is expected that a vote on screen trading will be held within a year when the package of proposals has been fully formed.

CITICORP PROFILE BY LACHLAN DRUMMOND

Leader in the field of foreign newcomers

CITICORP, the world's biggest bank, may not harbour immediate ambitions to be the biggest in Australia, but it believes it will be the most competitive and broadest spread of the 16 foreign newcomers about to spring onto the Australian scene.

It has something of a head start on most of its rivals in the scale of operation it has built in the past decade, with \$2.5bn of lending business on its domestic Australian books through its finance company — the number four in the industry — and its merchant banking operation — number 14.

That puts it head and shoulders above everyone but the National Mutual Royal Bank combination which will start with a similar total of assets, although unlike Citicorp, not all the elements will be wholly-owned.

For Citicorp there also is about \$1.5bn of lending into Australia from affiliates of what will become Citibank Ltd, which gives Citicorp a total lending presence which would rank it number seven after the big four nationally-operating banks and the two biggest state banks.

It expects to open its doors as a bank in mid-December, although with the traditional Christmas shutdown of industry, it will be February before it is really functioning.

A December start also rests on a revolving outstanding stumbling blocks with the Reserve Bank, which with the question of an interposed holding company between the U.S. bank and Australia now resolved in favour of the U.S. view that the holding company stays, rests on the Reserve's demand that Citicorp's financial operations be carried under the umbrella of Citibank in Australia.

According to Michael Cannon-Brookes, the Englishman who is Citicorp chairman and head of corporate banking, most of the group's operations — ranging from the finance company and merchant bank operations to insurance and building society — will hang from Citibank.

On the corporate banking side, Citibank will open with a branch in each of the five mainland state capitals, while in consumer banking — where it has no existing comparable operations — there will be a more measured approach, with first one Sydney branch and then another by February, with the number two city of Melbourne being opened up from 1987, in that city it has an existing building society operation which has and will be a test bed for learning how to become a consumer bank in Australia.

The end-ambition is for a 35-branch consumer presence nationwide by 1990, when overall Citibank expects to have its onshore assets up from \$2.5bn to \$5bn to \$8bn.

It already has \$800m of capital committed in Australia and will be bringing this up to

Citicorp already has an operation in Melbourne (above). The aim is for 35 consumer bank branches nationwide by 1990.

\$400m to support the growth in business and provide the funds for what will be a costly exercise, particularly in what consumer banking chief and vice-chairman Steve Baker describes as "inch a day" retail banking business.

According to Mr Baker these banks involved in the consumer area will lose a lot of money for a good while.

"It's going to be a very, very costly affair, in the consumer business it takes a long time to build up enough customers to justify that one branch you've just built. When we say we're going to build 35, you've got to have very long view."

With a starting point of 1981 net earnings of \$25m for the finance company, Mr Cannon-Brookes says Citibank "almost certainly will always be profitable" in its high-cost opening years.

In the corporate sphere, according to Mr Cannon-Brookes, Citicorp will gain immediate benefit from its ability to offer bank account and deposit facilities.

It already is well established and regarded in the foreign exchange field — where it ranks about number four or five in size — as well as the risk management area of interest rate and currency swaps, hedging, options and forward cover and in the merchant bank debt securities trading and placement operations.

It is also established as a lender to its target client base of the medium to big corporates and the government and semi-government spheres.

"The main benefit will be in customer service. We are one of the leaders in foreign exchange and every time we do a trade we have to cut a cheque, not just debit or credit an account with the other banks. It's inefficient, it adds costs and there is a lack of customer service."

The bank's status will also allow it to expand in electronic banking domestically. A field where it already provides clients direct access to its offshore networks. The experience in electronic banking is also an area where Citicorp believes it can bring overall benefits

through its seat as a full member of the Australian clearing and payments system.

In the consumer field, Mr Baker is looking beyond bricks and mortar branches and although it currently has a building society automated teller link in Victoria, is exploring ties with other networks to achieve the national spread of cash machines for its clients.

"Growth should be exponential over time. We are not interested in having a thousand branches but we will have many more branches, we think, than any other foreign entity over time."

"We are going to get to the consumer through direct mail, automated tellers and through other banks and retail networks."

In-house

There is an in-house client base to draw from with 100,000 building society customers. A similar number in each of the insurance business and the consumer finance operations, while Diners Club, where it has a local partner, offers scope to tap into further hundreds of thousands of potential customers. And the Citibank package will be designed to pull as many of these strings together in "relationship banking."

In both corporate and consumer areas Mr Cannon-Brookes and Mr Baker believe that concentration on three basics — people, innovation and customer service — will provide the necessary differentiation for Citibank to stand out of what will become a crowded banking rack.

"We're quite optimistic we can bring something to the party," says Mr Baker.

Mr Cannon-Brookes perhaps captured the thinking of his 15 new rivals by saying: "The Citibank philosophy has always been that wherever we can get a franchisee like to get it and that taking a 10-year view, it is essential to us that we have a commercial banking franchise in Australia. It's the last major developed country where we don't have one, so we were delighted to get it."

It's the little things that make Australia a great place to do business.

Don't get us wrong. The rest of Australia has a lot going for it.

But you can save yourself a lot of time and money by concentrating on just 3% of Australia's land mass: Victoria (which just so happens to be the same size as 100% of the land mass of the U.K.).

60% of Australia's largest companies are headquartered in Victoria's capital, Melbourne.

95% of the oil and gas that is produced in Australia comes from

Victoria and Victoria's brown coal reserves have been calculated to last until at least the year 2400.

It's the cheapest energy source in Australia.

And Melbourne boasts the largest container port in the Southern Hemisphere and an international airport that's open 24 hours every day.

Think of Victoria as the business heart of Australia and you're getting the right idea.

There's more you should know, about Victoria's leading role in

agriculture, manufacturing, scientific research and much more besides.

And Victoria's not nearly as far away as you may think.

Only a telex away, in fact.

John Gault is waiting to hear from you on (Telex) AA 33832, at the Department of Industry, Technology and Resources, 228 Victoria Parade, East Melbourne, Vic., 3002, Australia. Telephone: (61-3) 418 2000.

He's keen as mustard. 100%.

Victoria. You couldn't start your business in a better state.

Thinking the unthinkable

By LARRY KLINGER

A major rethink in the nation's trade policy is now under way. It involves an export drive aimed at Asian markets coupled with tariff reductions which will benefit its neighbours.

FUNDAMENTAL CHANGES are taking place in Australian trade policy. They have in most part been forced on this resource-rich country by the world recession in demand for its raw materials. But the fact that the national need to export has been a central issue to virtually all economic policy, and recognised as such by a growing body of the population at large, means changes, once near the unthinkable, are beginning to happen.

One factor is that Australia, for long one of the most protectionist countries in the world, is actively pursuing a policy of tariff reduction. The pace will be slow but the policy is in train, significantly against the world trend.

The reasons are manifold, but the chief one is that the nation's policy-makers have decided that, if Australia is to become truly competitive, it must be exposed to wider market forces rather than rely, as it has long done, on exports of basic foods and minerals while its manufacturing industry confined itself to import substitution for its relatively small domestic market.

Another important shift in attitudes, and again one that is permeating through the wider public, is the growing awareness of the economic impor-

tance of Australia's neighbours in the Asian Pacific region. What was not long ago regarded as only the yellow peril is now increasingly being seen as the white hope of Australian trade.

Government policy is increasingly turning the ideas of a full export drive aimed at the expanding Asian markets while, at the same time, offering the prospect of reciprocal benefits to its neighbours through trade liberalisation at home.

While it is often forgotten in Australia's heated political debate on "whether the country is going broke" that much in the economy is fundamentally healthy, as the OECD pointed out earlier this month in its annual report on the country, there is no doubt that its trading position is in a real trouble.

Australia's ranking as a world exporter over 30 years has fallen from 8th to 23rd. Its share of the world market has declined from 2.6 per cent to 1.2 per cent. The international purchasing power of its exports, compared with other major trading nations and its penetration of markets, even in the Asian Pacific region, has been steadily declining.

Several of its agriculture sectors as a proportion of their world markets have significantly shrunk, mainly because of its once major customer, Britain, joining the protectionist Common Market and the EEC's heavily subsidised export surpluses.

Mainstay mining, while rebounding in value terms because of the depreciation of the Australian dollar, may, according to company executives, still be in for serious trouble if the world's embryonic economic recovery does not mature soon.

10 per cent growth

Manufacturing has grown at an annual rate of more than 10 per cent over many years but still only accounts for around 20 per cent of the country's export performance. Moreover, its share of world exports of manufacturers has fallen since 1953.

Mr John Dawkins, Trade Minister, recently told Parliament in an untypical word of understatement: "Our efforts to develop the exports of products in high demand have been less than satisfactory. As a result, Australia's trading per-

formance has been relatively poor."

To ease the situation, the Government is relying on the 20 per cent depreciation of the Australian dollar since it was floated two years ago to boost revenue in the country's important commodities traded in U.S. dollars, while it also helps ensure reliability of supplies and competitiveness on costs through its wages accord with the unions.

Turnaround

Indeed, exports of important commodities, such as coal and iron ore, aided by a burgeoning resource in world steel production, have provided some companies with profits rather than their having to go into the red. Meanwhile, the number of man-hours lost because of labour disputes is declining dramatically.

However, the Government realises that this is not enough for a lasting turnaround in Australia's trading position. What is needed is a restructuring away from basic commodities—which can be expected to suffer from further technological advances in energy-saving substitutes—towards those "products" in high demand, namely modern manufactures and high-tech services. It must also find new markets and expand existing ones.

This, of course, will take time, and the Government has recently been emphasising that there is a longer row to hoe than just by accepting prices and wage restraint. Mr Bob Hawke, the Prime Minister, said in a major speech only a fortnight ago that the real test of his Government was whether it could see sustained growth over a long period, through Australia being transformed into an outward-looking economy.

Moreover, high-level officials will admit privately that, for the foreseeable future, the only hope for a significant overall trading improvement is in commodity sales. That is one reason why reviews are under way on export controls covering coal and petroleum.

Meanwhile, longer-term hopes are being pinned on the Government's and industry's efforts to penetrate the Asian market, with bilateral contacts being increased apace. Officials have been impressed by the iron ore industry's aggressive marketing in Europe obtaining a larger

market share there, even at a time when EEC ore imports from all sources were being cut back.

While contacts are being expanded with South Korea, Taiwan and Indonesia, China is the main concern of both government and industry, with the Department of Trade recently setting up a special China section charged with the task of pin-pointing special areas where Australia has the best opportunity to place its products.

Officials believe that Australia's industry has already managed to establish a base on which to build. Australian exports to China increased by about 75 per cent over the past year, and several joint mining projects are in advanced negotiation.

The realisation has also been growing that Australia often has more in common with commodity-based developing countries, Canberra is actively pursuing the possibility of a formal alignment of the trading nations in the Pacific basin, though even Mr Dawkins admits that it will probably be 25 years at least before such a trade grouping could be truly effective in global policy.

It is in this vein, however, that Australia is seeking another round of multilateral Gatt negotiations, in the hope that an Asian Pacific alliance could gain agreement for greater access to the U.S. and EEC markets.

However, it is unlikely that Australia and some other Pacific Basin countries would participate if there was no concrete pre-commitment to deal specifically with trade distortions in primary products, especially with agriculture.

The current Australian Government has decided, at least for the time being, on a relatively low-keyed approach in its dealings with the EEC, in contrast to its predecessor, which took the opportunity to lambast European protectionism and subsidy on any given occasion.

The Hawke Government wants to be seen to give the new European Commission, which is pledged to end the Common Agricultural Policy's open-ended subsidy, a chance. Privately, however, officials are more than sceptical that much will be done by the EEC's member-states to change a

policy that is estimated to be costing Australia at least A\$1bn a year, or the equivalent to the whole of its record exports to China.

Back at home, the emphasis is on attempts to stimulate manufacturing and high-technology exports. Here, the news is both good and bad. The manufacturing industry is almost certainly leaner, due to the world recession's forcing a cutback on costs and, therefore, more internationally competitive than it has ever been. But, as even the Government consistently notes, it is still short of capital and lacking in international marketing skills, and industrial economists say they see no signs of any significant re-investment or more importantly, major new investment.

The Government has instituted several limited assistance programmes agreed by itself, business and unions to promote greater productivity and efficiency linked to greater competition from imports, notably in the car industry. Similarly, assistance programmes are in train for computers, steel and shipbuilding, with another promised for industrial research and development.

Initiative

There may also be forthcoming next year a Government initiative to provide greater export incentives for manufacturers of specialist products such as solar heating systems, roof tiles, yachting equipment, hiotechnology and industrial ceramics. It is this scale of business which has achieved continuous growth in world markets in recent years: heating and cooling equipment, electro-medical equipment and medical instruments.

Critics say, however, that it all may be too little, too late. "Australia blew its advantage years ago after the second oil shock," says one leading industrial economist. "At that time it could have used its cheap energy resources to establish value-added industry on a real scale."

"We can't do much more now than to twist a few foreign arms, saying that, if you want to sell more high-tech to us, then you'll have to make more of it here. We're still stuck with our commodities and that means when the U.S. sneezes, Japan catches a cold and Australia gets the flu."

Major sectors: contribution to GDP

Listed here is the contribution of major sectors to Australia's gross domestic product and to exports

PROFILE: EXIM

By LARRY KLINGER

A unique experiment

THE LINKS between government and business have always been more highly visible in Australia than in most countries, not least because of state ownership of the natural resources of which the national and various state economies traditionally depend.

This is no less true in the state of Western Australia, but Exim, the government-formed but financially independent Perth-based organisation, is an experiment unique to the country as a whole.

Its sole aim is to help see that the state exports more — goods, services, expertise—but at a clear profit to the company itself.

The Western Australian Exim Corporation Ltd., to give the full name, was established last year from a complex state government deal involving private industry. Its model was that of a Japanese state trading organisation.

Mr Brian Easton, Exim managing director, said: "First of all, we gathered together a half dozen or so top professionals with special knowledge of China in particular; the rest of Asia in general and the Middle East. We have people with special experience on how to deal through Hong Kong. We have Arabic speakers."

Mr Easton himself has extensive technical and managerial experience in timber technology, industrial housing fabrication, construction supervision and company management in Europe and the Middle East, as

Mr Brian Easton, managing director of Exim: sole aim is to boost Western Australia's exports

well as Australia. "We must have value-added, before complete dependence on raw materials becomes serious. We want to lower the jobless rate in this state, and keep it that way."

One of Exim's first projects going ahead is the building in the state of a university for commercial studies to serve the Asian Pacific region. Japan has invested A\$150m in the project, and Exim foresees an eventual student population of 6,000, bringing in A\$100m annually in fees alone.

Other projects under way include sales of farm machinery to the Middle East and building products to China through

Hong Kong. Exim is also organising talks with China aimed at setting up a joint venture to process fruit juice in Western Australia.

Other ventures, which might sound bizarre to an outsider unfamiliar with the vastness of Western Australia's arid Outback and the remote stretches of India Ocean coastline, range from the production of jewellery by coating exotic pebbles and small sea creatures with Western Australian gold, to the farming of heavy cattle over massive tracks in the state's disused northern reaches to provide low-fat hamburger meat to feed the growing Asian appetite for Western-style fast food.

Even the setting of Exim's offices illustrates the proximity, at least physically, of government and business. The state's striking new Parliament building looks down on the western end of St George's Terrace, the wide boulevard that flows through Perth's business district of gleaming new office towers. At No 197, is the 23-storey City Mutual Tower, housing many of the most important government offices, as well as those of leading mining and insurance companies. Exim's offices are on the 21st floor. Mr Burke's offices are three floors down.

Mr Easton pointed to the inner door of his office suite. "The Premier," he said, "can walk in here at any moment. Not in a managerial capacity, mind you, but with ideas or simply because he has a positive interest in what's going on."

BARRACK HOUSE GROUP

BRINGING AUSTRALIA TO THE WORLD

The Barrack House Group commenced trading in 1953 and has operated under the same management team led by Denis Horgan for more than 15 years.

Barrack House is an investment bank with emphasis towards Australia's natural assets in mining and oil resources: the rural sector wine production and technology. The public may invest in the Barrack House Group through its listed associates BARRACK MINES LIMITED, BARRACK TECHNOLOGY LIMITED, and METRAMAR MINERALS LIMITED.

A key to the development of Barrack House Group has been a commitment only to undertake ventures where technical skills have first been secured and which are capable of taking the project through to completion.

Investments are made where necessary on a joint venture basis to obtain these skills and to provide an incentive for those employed.

The success of this formula is demonstrated by a ten fold increase in shareholders funds since 1982. Over the same period, earnings, net of money market activities, has remained modest.

Mindful that success should not only be measured in financial terms, the Barrack House Group has accepted responsibility not only to provide challenging career opportunities for its team, but to contribute to the community as a whole.

In support of the arts a number of major events have been planned by the Group including The Lesauwin in London Concert and Cabaret scheduled for October 3rd, 1985. This charity evening, to be performed in the presence of Her Royal Highness The Princess Anne, will publicise Western Australia and the America's Cup.

A recent successful Australian Tour of The London Philharmonic Orchestra was sponsored by Lesauwin Estate which also commissions works of art by Australian painters for its premium wine releases.

Concerned that opportunities are created for youth, the Group has underwritten the construction of a barquentine for The Sail Training Association of Western Australia.

GOLD PRODUCTION
BARRACK MINES LIMITED, the Group's publicly listed subsidiary has brought into production two of Australia's most successful and technologically advanced goldmines. Its Wiluna and Horseshoe Lights projects combine to rank in the top 10 gold producers in Australia, accounting for 4 per cent of the national output.

BARRACK MINES LIMITED continues to actively develop gold projects throughout Australia and is currently negotiating for the acquisition of several other promising mineral projects. Its wholly owned subsidiary A.S.B. ENGINEERING PTY. LTD. was responsible for the complete design, procurement, erection and commissioning of the substantial cobalt-rich pulp gold recovery plants at Wiluna and Horseshoe Lights — amongst the largest of their kind in Australia.

A.S.B. is regarded as one of Australia's leading C.I.P. exporters and represents a substantial technical resource within this rapidly expanding mining Group.

OIL EXPLORATION

In oil production and exploration, BARRACK ENERGY, through METRAMAR MINERALS LIMITED has been an active explorer since 1978 and is now deeply involved in the development of an oilfield at Mt. Homer in Western Australia.

MERCHANT BANKING

In merchant banking, Barrack House plays an important role in the Western Australian market. It has underwritten successful public company takeovers and has negotiated public company takeovers. Barrack House Limited led the first Western Australian syndicate to tender for the funding programme of the Western Australian State Government, and is acknowledged as one of Western Australia's leading money market operators.

The Group's merchant banking arm is responsible for internal funding, and a range of investment and joint venture partnerships throughout Australia and overseas.

TECHNOLOGY

The Caru Combustion Process, hailed as one of the most significant developments in the automotive industry for many years, has been developed over 12 years by BARRACK TECHNOLOGY LIMITED.

This publicly listed company has recently moved its research and development team to the United States. This move has attracted considerable interest within the automotive industry.

The Caru Combustion Process (CCP) is being further developed with a view to introducing the process to mass production engines. Its technology essentially combines the advantages of both the petrol and diesel engines whilst eliminating their disadvantages.

Each combustion cycle is split into two phases — one in an auxiliary chamber acting as an ignition cell, the other in a main chamber.

A unique valve or 'flow modulator' separates the two chambers. This valve differentiates the Caru engine from other prechamber or ignition cell engines.

The valve allows precise control of the combustion process in each of the two chambers.

The CCP is complementary to the current research and development trends of the industry towards the Open Chamber Stratified Charge Engine — regarded by leading automotive engineers as 'the engine of the future'.

WINE PRODUCTION

The Lesauwin Estate winery and vineyard complex was formed in 1973 with the prime purpose of producing premium varietal wines. It has succeeded in doing just that, and Lesauwin wines now have a reputation throughout the world for both excellence and high quality.

This philosophy of excellence is pursued in every facet of the Estate's operations. No effort is spared to produce wines of international standard.

This was reflected recently when the prestige wine publication 'Decanter' voted the 1981 Lesauwin Estate Chardonnay the best in the world at an international judging.

Lesauwin wines are now available in London at Hobbs & Co., 29 South Audley Street London, W1. Phone number: 01-409 1058.

These wines include Cabernet Sauvignon, Pinot Noir, Chardonnay, Rhine Riesling and Sauvignon Blanc.

**We've made our century.
We're still pushing back the boundaries.**

seems very apt to talk about any great Melbourne institution in sporting terms.

After all, Melbourne is notoriously sports-mad.

The Melbourne Cricket Ground hosts some of the world's great cricket matches as well as that more mysterious ritual, the VFL Grand Final.

And for the Melbourne Cup, even the Stock Exchange closes for the whole day.

But, for the rest of the year, the Stock Exchange of Melbourne is one of the busiest in the world.

That's hardly surprising, given that it is the home exchange of such giants as BHP, CRA, ANZ, ACI, National Australia Bank, Bougainville Copper and Western Mining Corporation.

It's still one of the most innovative, even after 100 years.

For example, later this year we will introduce what we believe is the world's first futures market in listed companies' shares.

As we head into our next hundred, perhaps we can help you make a few more million?

THE STOCK EXCHANGE OF MELBOURNE

Trade links with Peking strengthened

The China Connection
LARRY KLINGER

THE NEWLY-ESTABLISHED China Section has pride of place in the Australian Department of Trade, and is viewed in much the same way in the heart of the Government as well.

Having, through lack of global muscle, suffered over the years under the weight of the U.S., Japanese and EEC economic giants, Australia sees China not only as the most immediate opportunity to increase sales but as the obvious place to create a climate in the Asian Pacific that could guarantee high levels of trade outside the world's existing trading blocs.

Advantages

Australia believes it is better placed than most to take advantage of China's outward-looking modernisation programme and that, even as China further co-ordinates, future purchases to counter the big payments deficit it has incurred, Australian products will not suffer.

This optimism is based on the perceived success of Australia's long-standing political bipartisan policy to develop relations that followed the Government of Mr Gough Whitlam's decision in 1972 to be among the first non-Communist nations to recognise the People's Republic (indeed, it is not infrequent now to see in some Australian trade literature references to the Republic

of China in Taiwan as Taiwan Province).

The current Australian Government, under Prime Minister Bob Hawke has greatly intensified diplomatic contacts, which culminated in Chinese Premier Zhao Ziyang's visiting Australia in 1985 and Mr Hawke's visit to China last year.

These diplomatic rounds laid the basis for several co-operation agreements, notably in coal, agriculture and iron and steel, the latter of which has blossomed into concrete negotiations for a new iron-ore mine and the re-opening of a blast furnace to produce pig iron.

A programme for Australian technical assistance in iron and steel has also been established, jointly financed by the Australian Development Assistance Bureau and the Chinese Special Project Technical and Support Facility.

Meanwhile, Australia has devoted a considerable amount of its hard-pressed finance to the China operation, with Mr Dawkins announcing only last month that he was providing an unspecified additional amount of money for his department to promote trade with China.

Additionally to the new China Section being set up in Canberra, special regional officers have been appointed to state capitals, with the number of trade commissioners, operating in China itself, being expanded. There are now four in Peking, two in Shanghai and another in Hong Kong, with responsibility for South China, Government - to - government procedures have been put in train to cover possible lines of credit, arbitration clauses and general and double taxation agreements.

"I think it is all working pretty well," says one high-level official. "China likes us. We're not big, we're not a threat, we have no nasty colonialist past, no Taiwan lobby and we are demonstrably interested in pro-

Aluminium exports to China have increased five-fold in the last year alone. Australia believes it is better placed than most countries to take advantage of China's modernisation programme.

Exports to China

Australian exports to China in millions of Australian dollars	
Fiscal year	
1975/76	220
1976/77	185
1977/78	581
1978/79	438
1979/80	845
1980/81	671
1981/82	603
1982/83	644
1983/84	609
1984/85	1,056*

moving the Asian Pacific region."

The main Australian trust, he said, was to define key sectors where there is specific demand for Australian products, such as in the wool industry, one of the few agricultural areas where Chinese policy has failed and where there has been a loss of tens of millions in the national herd.

"The bottom line, of course, is sales. But we are not trying to flog, say, dolls' eyes simply because we happen to make them. And I think the Chinese understand this."

Australian exports to China during the fiscal year, just ended, totalled a provisional \$1,056m, more than 70 per cent up on the previous year. China's ranking in Australia's

main markets leapt from 10th to 5th.

The principal export remains wheat, which is running at its highest level in more than five years but whose proportion of all exports to China is dropping as others—traditional and new—increases.

Exports of iron and steel ingots and products, in the year just ended, have doubled in value, and iron ore and concentrates rose by nearly 80 per cent. Exports of unprocessed wool nearly trebled, aluminium and unworked alloys quintupled and leather goods increased six-fold. Coal, a new export, recorded a sales worth an estimated \$519.5m.

"I think we are getting it right," said an official, "but it would be silly to assume there will be 'x' billions of dollars by such and such a year. The figures will jump up and down, depending on what's happening in China. We have no definite targets."

"What we want is substantial exchanges. We want two-way trade. And we must be quite certain that it doesn't get too out of balance, particularly with Chinese imports."

This is one of Australia's more worrying problems, one on which Mr Dawkins was obviously preoccupied during his visit to Peking earlier this month.

Bidding rises to dizzy levels

Takeover battles
LACHLAN DRUMMOND

A MIXTURE of corporate vigour, mature markets, limited economic growth and a few availability of funds have spawned a hectic bout of takeover jousting which was taken to new heights in July when two AS1bn bids were announced within 10 days of each other.

The heady pace of takeover activity has created its own backlash, with Mr Henry Bosch, the new head of the corporate watchdog, the National Companies and Securities Commission, firm in his belief that there are too many takeovers and doubtful of the national benefit of many of these developments.

He is supported by establishment companies and institutions in seeking a reworking of the takeover mechanisms, while the scale of the most recent takeovers has brought a sharp intake of breath in Parliament and the Press.

The monopolies body, the Trade Practices Commission (TPC), is meanwhile committed to allowing sensible rationalisation moves to go ahead and also is armed with an Act which leaves its threshold for action at a high level and with the onus of proof of dominance of a market resting with the commission.

The two biggest bids yet seen—one at \$1.2bn by Bond Corporation Holdings for Castlemeine Toobys and the other at \$1.1bn by G. J. Coles for the Myer Emporium—have been settled in double-quick time, despite their size.

The TPC found it impossible to act against Coles and Myer, finding that despite the concentration of power being "substantial by any test" it could not find that the merged entity, with 20 per cent of national retail sales, would be able to "behave in the market with such discretion as to price, product and service that it will be able to remain unaffected by the countervailing actions that its competitors will take to maintain their own positions."

The Bond-Castlemeine deal has yet to be completely cleared, although the bidding

stage was allowed to go ahead because of the "fine judgment" involved in determining whether the Trade Practices Act, a matter the commission believed best left to the courts.

The fine judgment would reflect that while Bond would move out to about 15 per cent of the national market, the national market as such does not exist, with the brewing industry instead based on regional monopolies and duopolies and that it is not moving to "dominance" in any of the two new markets; despite this, in the end there are now two players—Carlton and United and Bond/Castlemeine—accounting for 32 per cent overall.

At Bond, with a starting stake of 18 per cent, it was its ability to convince Allied-Lyons of the UK that \$300m for its 25 per cent stake was the right price. This partly rested with the Castlemeine Board's inability to convince Allied to stay around for a possible higher rival bid from an overseas company.

Although the bids share that common thread and a similar price, the underlying reasons for the Coles-Myer retailing merger, the speed of conclusion also reflected some corporate facts of life: chiefly, that success rested with convincing a small band of Myer family and friends representing half the capital that its price, once raised, was the right one.

At Bond, with a starting stake of 18 per cent, it was its ability to convince Allied-Lyons of the UK that \$300m for its 25 per cent stake was the right price. This partly rested with the Castlemeine Board's inability to convince Allied to stay around for a possible higher rival bid from an overseas company.

Although the bids share that common thread and a similar price, the underlying reasons

for the two offers are divergent, but together serve to illustrate the reasoning behind the continuing wave of Australian takeovers, where at any one time there are usually 35 bids current and many more than that being batched in the minds of corporate executives or in the backrooms of the multitude of merchant banks and stock brokers established in the "corporate" quarter of the financial sphere.

Coles' thrust for Myer is in the classic mould of a successful and powerful company seeking to expand its market share, with Myer additionally diversifying the group out of the lower margin supermarket and discount end of the retail market into the higher margin middle market departmental store area.

It has the financial muscle from its own successful retailing operations to finance the cash portion of its bid, plus the ready market acceptance of the best-performing retailer to allow hefty placements of its shares to ensure it does not over-reach on borrowings.

That is backed up by confidence that its own management skills will allow it to win from Myer something more than can existing management, plus a cyclical indication that Myer is about to pull out of a self-induced three year earnings slide and moving to a new phase of prosperity based in part on shifting demographics.

With 16 new banks due to be licensed soon and more than 50 merchant banks backing up the

existing big four trading banks and the half dozen aggressive state banks already operating, funding lenders willing to listen to one proposal, particularly with traditional lending demand relatively low because of the generally strong level of corporate performance and lack of impetus for big grass, roots expansion, particularly in the resources area.

Indeed, most senior executives stand confident, time turning down financing or takeover deals bubbling up through the ranks of the takeover specialists and would-be advisers.

All could find their takeover wings clipped in a time when the base data to draw conclusive assessments from which to base further changes are alterations to the takeover law.

Already its head, Mr Henry Bosch, has proposed a shift from the current black letter approach to the law to a more London-style discretionary panel and is also looking at lowering the takeover threshold point from 20 per cent to 10 per cent.

It has also devoted much attention to the partial takeover, a commonly employed tactic where first 20 per cent — the stake allowed before a bid must be made — is assembled with a bid then launched for a further 20 to 30 per cent.

In the hands of a skilled tactician, the prospect of a sharply lower share price after the bid can usually draw enough shares from market-driven and performance-oriented fund managers to ensure control passes without all shareholders being able to participate fully in the premium for control which is assumed due to shareholders.

With each bid, other defects and loopholes seem to emerge, providing more than a handful of work for Bosch the sheriff and his limited bank of deputies who, as well as grappling with the conceptual complexities of takeovers, find that in traditional Australian frontier style, there are enough entrepreneurial cowboys wearing black hats in the day-to-day share-dealing world to keep them busy.

Ten largest bids in Australia

Bidder	Target	Date	Total valuation
Bond Corporation	Castlemeine Toobys	July 1985	\$1.2bn

Takeovers and mergers by dominant suppliers lead to clearer divisions in a series of regional markets

A billion dollar shake-up

Brewing
LACHLAN DRUMMOND

THE AUSTRALIAN brewing industry has recently witnessed the final stages of an unprecedented five-year consumption binge in which the companies, rather than their products, have been the most heavily consumed commodity.

Some of the mergers and takeovers have themselves been the product of the changing nature of the industry from one of steadily growing consumption to one of mixed decline and advance in the face of shifting social preferences and rising excise taxes.

Others, like the biggest and most recent \$120m takeover of Castlemaine Tooheys by Bond Corporation Holdings have been driven more by the desire to gain control of the still generally stable and predictable profits and cash flows of the brewing industry.

In the process, the Australian beer market has been essentially slimmed to two major producers—the Elders IXL group's Carlton and United Breweries and the Bond Corporation's Swan and Castlemaine Tooheys.

Between them they account for just on 92 per cent of the national market for beer, with Cub perhaps having a one percentage point advantage over the newly-formed Bond stable.

However, that market dominance is not based on even market shares of the national market. The national market exists mainly as a statistical notion rather than a marketing target, but the latest shake-up—and the earlier takeover efforts and current marketing policies by Cub—suggests it will become more of a reality.

As the industry now stands it is more clearly cut as a series of regional markets, in the main served either by a monopoly or clearly dominant supplier.

In Western Australia, Bond's Swan Brewery is the only local producer and has about 95 per cent of the market, with Cub, the Foster's brewer, the main "import" competitor.

Cub, meanwhile, enjoys a monopoly-producer status in its

home state of Victoria. Taking about 95 per cent of sales with increasingly vigorous competition from its neighbouring states of South Australia, NSW and—across the water—Tasmania.

Cub also enjoys a significant slice of the South Australian market, where it also owns one quarter of the dominant brewer in that state, SA Brewing Holdings, which in turn has a small stake in the tiny Coopers Brewery in that state.

In Tasmania, the industrial Equity Ltd group has had control of the cascade boaga operation for a little more than a year. It is the only producer in the island state and dominates a market where Cub also draws some additional volumes.

Market shares

In Queensland, the Castlemaine arm of the new Bond group member has 75 per cent of the market, with Cub's offshoots in that state taking the remainder.

The only competitive market is in NSW, the biggest population state where Tooheys arm of the Castlemaine Tooheys Group—merged in 1980—has about 55 per cent of beer sales. Tooheys built itself from a junior position in the market with an aggressive single product marketing campaign in the 1970s and 1980s which backed with heavy spending on upgrading capacity and a deft reading of the shift in emphasis in beer sales away from the pub and to the licensed club areas.

Its traditionally far stronger opponent, Tooth, faltered under a poor product, outdated plant and a deep involvement in pubs that became increasingly relevant with the outlawing of tied houses in 1975 and proliferation of licensed clubs.

Tooth was taken over by the Adelaide Steamship group in 1981 and, in mid-1983, Cub—taken over by Elders as from early 1984—snapped up the rebuilt Tooth brewing interests for \$180m to better assault its only significant rival, Castlemaine Tooheys.

Importantly, Cub did not buy the pub freeholds and is currently entangled in legal actions to stop the May move by Castle-

maine Tooheys to take a head lease from Adestem over 248 pubs.

Despite the formal end of tied houses in 1975, Castlemaine would probably gain 2 to 3 points of market share in NSW by simply building itself to its normal NSW market share in these outlets, where it currently holds only some 25 per cent or less against the cub brands.

The Cub challenge is set down for hearing later this year and the result will have important implications for both sides battling in a market place where each percentage point is hard—and expensively—won.

The Cub market battle will be made the more difficult with Castlemaine Tooheys introduction of packaged versions of Bond's Swan beer into its distribution network, a step which will give Castlemaine Tooheys a three-brand assault on the consumer's palate from its own resources—four, if the Guinness it brews, under licence, is included.

The concentration of the industry meanwhile comes as the industry appears to be returning to a period of reasonable growth after a 10-year period when average volume declined by 0.72 per cent compound within a broader 20-year trend of 1.9 per cent compound annual growth in volume.

Castlemaine Tooheys has forecast that its overall beer volumes will rise 1.5 per cent for 1985-86—about the same as in 1984-85—with further growth of 1.7 per cent and 1.8 per cent in its Queensland and NSW markets in the following two years, in line with adult population growth estimates.

That suggests an end to the steady decline in per capita consumption in Australia over the past decade from 140 litres in 1974-75 to 118 litres a head in 1983-84, a statistic the Australian Associated Brewers (AAB) has co-related with successive increases in excise duty, which since 1983 has been indexed at a level which the AAB says works out as a 155 per cent tax rate on an ad valorem basis on the wholesale price of beer.

On the issue of a 750 ml bottle, the AAB says the excise rate of 50 cents compares with an equivalent 34 cents in the

Big bidder: Mr Alan Bond, chairman of Australia's Bond Corporation

UK, 8 cents in the U.S. and 4 cents in West Germany. Among beer-drinking Western nations, only Ireland's 62c of tax per bottle is worse.

The decline in beer consumption has been matched by an increase in per capita wine consumption from 12 litres to 19 litres over the same period, with wine only recently being hit with a 10 per cent sales tax.

Part of the response from the brewers to the domestic outlook has come in product development of low and minimal alcohol brews to match the shift to far harsher drink driving laws and random testing of drivers and also to seek greener export pastures.

Exports

In many cases it has involved "internal" exports to other state markets, although almost all have now developed a wide export presence outside Australia.

Cub's Fosters is distributed to 80 countries and for some time has been successfully brewed and marketed in the UK under licence to Watney Mann Truman, the Grand Metropolitan subsidiary.

Castlemaine's Fourx is a more recent licence product in the UK, proving a successful launch for Allied-Lyons, the former 25 per cent shareholder in Castlemaine.

Swan has long been available in the UK through a variety of distributors, although with the change of ownership for Castle-

maine, Bond Corp will be looking to see if Allied would tag on Australian Brewed Swan as a packaged brew for distribution alongside the Castlemaine Fourx draught.

Castlemaine and Swan have yet to enter the U.S. market, but with two or three separate products to offer it will be seriously exploring this market as a means of increasing volumes at its domestic breweries.

Cub is well-established in the U.S., with its big 750 ml (26 oz) cans, dubbed "Depth Charges," already part of New York folk lore. At the other end of the Australian scale, the tiny Coopers in Adelaide has carved itself a small cult niche in the U.S. for its sedimented brew, much as it has in the Eastern states of Australia.

These export exercises and extra production volumes they represent are increasingly important for the Big Two in the industry, each of which cannot afford to relax for a moment from bending to the task of first supporting the borrowings incurred to take them over and second to generate surplus cash flow and profits to support the broader operations and ambitions of their owners.

For Elders, these broader operations cover rural agency financial services, international trading and resources and, for Bond, a diverse range of property, television, retailing, airships, resources and oil and gas. The ambitions for both seem boundless.

Signs of upturn at last for chain stores

THERE IS a retailing adage that if you get the buying right, the selling will look after itself—and clearly G. J. Coles and Co reckons it has got the buying right with its A\$1.1bn takeover of Myer Emporium.

What its takeover of Myer, the leading departmental store retailer in Australia brings to Coles, the biggest supermarket and discount store operator is, by most measures, mind-boggling.

Together the two account for 20 per cent of Australian retail sales, which for the latest year to June 30 totalled A\$47.07bn, up 7.4 per cent.

That sort of market share is unequalled in any major western country and by comparison, putting the biggest food retailer and biggest department store retailer in the U.S. together would bring only 4 per cent of national retail sales, while the same exercise in the UK and Japan would produce only 8 per cent and 2 per cent of retail sales.

Those comparisons also underline the level of concentration already established in the comparatively small Australian retail market, reflecting the high levels of market share required to win the sort of high volume efficiencies deemed necessary for successful retailing.

Much of that concentration of retail power has come from grass roots expansion along with the rapid post-war growth in the Australian population, although there has already been a fair share of takeover activity to tack on additional sales volumes for the more successful among the dwindling band of major retailers.

The Myer Coles merger itself sparked the merging of the Woolworths retailing interests with the Safeway Australia supermarket chain, a A\$150m plus deal which adds \$1bn of sales to Woolworths, taking its combined retail market share from 7.9 per cent to 10 per cent and its national stake to the branded food retailing end of the market to just on 30 per cent.

Along the way to the altar, Myer had, in 1983, picked up the Greek Brothers department store chain in NSW for \$213m and the smaller Boons group in Western Australia, while Coles has in recent years added smaller specialty chains such as Ezywalkin and Fays in shoes

and the Katies Fashion Stores to its supermarket, Variety and K Mart discount store businesses.

Looked at over the past five years, the four big players in retailing—Coles, Myer, Woolworths and David Jones—have exhibited the traits of the big and rich becoming bigger and richer, taking their combined market shares from 22 per cent of retail sales to 30 per cent.

Coles, largely through its K Mart operation, has been the biggest winner with an increase from 9.1 per cent to 12.8 per cent as at January last, with Woolworths ahead from 7.2 per cent, the Myer-Grace Bros group from 6.4 per cent to 7 per cent and the smaller up-market David Jones group adding 0.2 percentage points to 1.5 per cent.

Retailing
LACHLAN DRUMMOND

But there has been an element of growth for all in the retail market—except, perhaps, the corner store operator—as new contestants continue to emerge and prosper, with Hongkong Land's Franklins discount supermarket operation gaining the largest share of the NSW grocery market at almost 25 per cent—equal to 10 per cent of national grocery sales and 1.7 per cent of overall retail sales—inside a decade and the Safeway group winning close to 10 per cent of grocery sales and 2.2 per cent of overall retail turnover in two decades from its Victorian base.

Added to this, the Liberman family, which has linked with the South African Pick N' Pay group to establish Australia's first hypermarket, has a shade over 1 per cent of retail sales through its other discount grocery operations while Devids Holdings, through its links with various chains of independent foodstore operators, effectively has 15 per cent of national grocery sales as a wholesaler.

Franchised convenience store chains such as Jewel, Shoehs and Foodplus are also flourishing by offering extended hours.

Key indicators for the retail sector are showing somewhat contradictory messages, with consumer sentiment generally positive but with the household savings ratio remaining in the relatively high 16 per cent plus

zone compared with a more normal 12 to 14 per cent.

It is thought that as interest rates decline there will be greater incentive for consumers to unlock some of that spending power, although whether this sentiment overpowers the squirrel mentality of consumers, at a time of pressure on real spending power, will crucially determine the future trends of retail sales.

However, stockbrokers Bain and Co concluded in a recent major study of the retail sector that the long decline in growth rates for current dollar retail sales was at last giving way to cyclical upturn, an upturn—in constant dollar terms—that had been masked by the divergent trends between CPI inflation and slower growth in retail prices.

The fly in the ointment is the continuing pressure on real disposable incomes, although Coles' K Mart operation and Myer's Target Discount chain are already well established with combined sales of \$2bn and dominance of the budget market to benefit from any swing downstream.

Overall, Coles Myer is well balanced with 25 per cent of sales to be drawn from department stores, 23 per cent from discount department stores, 33 per cent from food, 10 per cent from Coles' non-food and a further 10 per cent from its specialty clothing, shoe and rinks outlets.

Meanwhile, Woolworth's takeover of Safeway will further entrench its position in the highly competitive food retailing sector where the proportion of sales from that sector will rise from around 80 per cent to 85 per cent, although it will gain a better geographic balance, taking its Victorian market share up to its national average of 30 per cent, and taking its stake in the faster-growing Queensland market above 40 per cent.

It also gets Safeway of the U.S. as a back-stopping 20 per cent shareholder, which with friendly institutional interests should give it a solid base of support at around 40 per cent of capital against any predatory interests which may latch on to the 10 per cent stake in Woolworth that Coles must sell as its only concession to the toothless monopolies regulator, the Trade Practices Commission.

Some people are already well acquainted with Australia's offshore expertise.

A competitive spirit.

In late September 1983 the eyes of the world focused on Newport, Rhode Island, where the unthinkable was about to happen.

After 123 years, the United States was to relinquish the blue riband of 12 metre yacht racing.

In a sport that owes as much to high finance and technology as to dedication and skill, Australia won the America's Cup.

If this was to become world news, then another Australian achievement was to create as many waves in the financial world.

The Commonwealth Bank of Australia had just been awarded an Aaa + AAA long term credit rating, the highest and most reliable reference available.

An international perspective.

To put this into perspective, of the top 500 banks in the world, a mere handful have ever achieved a triple-A credit rating.

Of course, ongoing affirmation of a

bank's financial strength is dependent on its ability to maintain performance.

In this regard, the last four of the Commonwealth Bank's bond issues have been rated triple-A by both Standard & Poors, and Moody's Investor Services Inc.

Leaders in technology.

This year sees new consortia from many nations searching for the financial and technological resources which could give them the edge in the forthcoming defence of the America's Cup.

And this year Australia has already seen one breakthrough from the Commonwealth Bank.

Simply, our local customers can do their banking from home. Everything from paying bills to making travel enquiries.

They can monitor the money markets, view statements, transfer funds and balance accounts, using their own telephone, TV set, and a small keyboard.

Very few banks operating in the international market have the technology necessary to facilitate this service.

(Remember, too, that in doing this the Commonwealth has had to overcome Australia's vast distances and communication problems.)

Onshore experience.

In fact, you could argue that it's the very size, diversity and complexity of Australia's own banking needs that makes the Commonwealth such a viable option for overseas clients.

Our local experience ranges from the urban market: from finance and investment, through our manufacturing and service industry clients, out to the vast rural sector and highly specialised needs of the mining community.

It's the sort of local knowledge denied many other nations, and means we can staff our overseas offices with experts who have everyday working experience of the

problems and opportunities faced by many of our clients.

Offshore strength.

This combination of diverse expertise, proven technology and financial power, backed by the more traditional virtues of security and discretion, is increasingly attractive to potential overseas customers.

To this end, we have recently opened offices in Chicago and Frankfurt to further expand our 'offshore' representation.

They join our other overseas Commonwealth Bank offices in offering and arranging introductions to a complete range of major financial services.

Proving that Australia's offshore strength isn't confined to eleven yachtsmen.

Please contact your local representative office of the Commonwealth Bank for further information.

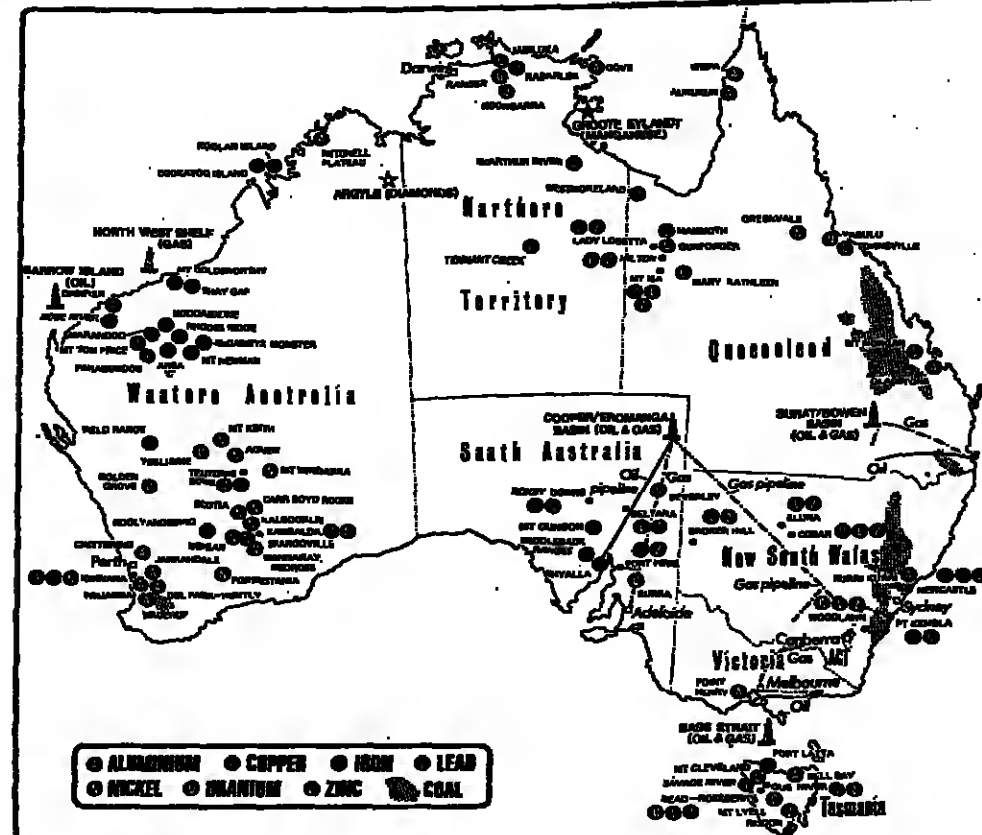

COMMONWEALTH BANK OF AUSTRALIA.

Fresh confidence in the iron ore sector

With the depreciation of the Australian dollar, coupled with Asian economic expansion, the Australian iron ore industry is well placed to increase its output and remain competitive.

Iron ore exports

From Western Australia (dry tonnes)

Year	Exports (dry tonnes)
1985 (projected)	90,000,000
1984	84,778,276
1983	69,584,333
1982	70,856,633
1981	68,154,329
1980	76,769,532
1979	76,069,376
1978	80,602,730
1977	70,267,543
1976	58,328,350
1975	48,377,910
1974	39,612,183
1973	21,786,764
1972	13,472,733
1971	7,457,403
1966	1,376,063

These figures are for exports of iron ore. A certain amount of ore from W.A. is shipped to the Eastern States. For example, in 1985 the projected total shipments of iron ore from Western Australia are approximately 96m dry tonnes, but of this, about 6m will go to the steel plants in the Eastern States of Australia.

Source: W.A. Australian Dept of Mines

OPTIMISM PERVADES the Pilbara, the world-leading iron ore district in the northern wilds of Western Australia. After reeling under successive world price cuts and a much longer history of debilitating labour strife, the major mining companies have a genuinely happy tale to tell. The Pilbara is, as the official tourist travel brochure proclaims, "where the excitement is real."

The reasons for the optimism are various, of which the most important are:
 • Greater demand because of a burgeoning resurgence in steel-making, especially in Japan, which still relies on Australia for about 45 per cent of its ore supplies and which recently agreed to a 1.75 per cent ore price rise, albeit after two years of cuts of around 12 per cent each.
 • Increased revenue in terms of Australian dollars, following the currency's recent 20 per cent depreciation against the U.S. dollar. Significantly, Hamersley, which, together with Mt Newman, accounts for 37 per cent of Australia's iron ore production, only this month announced half-year earnings of A\$77.8m, considerably more than double the corresponding period last year.
 • Growing prospects in Asia other than in Japan, especially with China, which is expected to purchase 7m tonnes of ore this year (against only 2m in 1983) and which is negotiating with Hamersley to open a joint-venture satellite mine east of the company's relatively new one at Paraburdoo.
 • The ability to offer greater reliability in deliveries following a maturing of industrial relations that has led to the formation of the Iron Industry Consultative Council, which so far successfully groups representatives of state and federal government, employers and unions, the latter at both official and rank-and-file levels.

Agreements

The only significant cloud over labour relations was lifted this month when the Federal Government reached agreement with the Australian Trades Union Council to consolidate their national prices and wages accord.
 It was feared in the Pilbara that, if these talks had failed, the mining unions might have struck for higher pay.
 Mr David Parker, Western Australia's Minister for Minerals and Energy and chairman of the industry's consultative council, says: "Prospects for iron ore are now looking better than at any time in the past 10 years."
 The most striking element of the Pilbara's current success story is the new rapport between employer and employee, which, according to both officialdom and the men and women literally on the ground, is unprecedented. It is almost unanimously said that all sides have set aside what has long been regarded as the region's traditional greed in order to make this report last.
 While the Pilbara is wonderfully beautiful to the nature-seeking traveller, to the people working there it can be simply a remote and lonely outback with a harsh climate, where levelling mountain tops to extract ore 24 hours a day, seven days a week, is a difficult and dirty way to make a living. Tempests are apt to fray.
 The industry is only 20 years old — and, surprisingly, the region, with its officially estimated 15bn tonnes of "demonstrated economic resources," which are still only being mined at about 100m tonnes a year, was not seriously prospected earlier because of the national

ban, until 1960, on overseas sales. Like other great mining rushes, the region was initially populated by rough-and-tumble men looking for quick, high profits and wages to take back to civilisation.
 For the first 17 years, industrial relations were often notoriously bad; strikes were rife; overtime was plentiful, with the companies operating with smaller workforces but with the workers earning more.

Conditions

"The trouble was," says a long-serving employee at Hamersley's Mt Tom Price mine, "there were many disputes just so the man could get a change to put their feet up. Living conditions weren't good, and the nearest real town, Perth, was a thousand kilometres away to the south."
 Indeed, as recently as 1983 there were 120,000 man-hours lost due to disputes, an average of about 12 per employee. This, of course, did not inspire confidence among buyers who sought reliability of supplies. Japan, for example, has since diversified its sources of ore.
 Much has changed over the years. Union leaders now openly congratulate management for improving conditions across a wide range of areas, from hiring more workers to reducing overtime and assisting in home ownership to providing better sports facilities and landscaping areas with imported trees and flowers.
 Management nowadays complements the unions for a greater willingness to negotiate before taking industrial action and a tendency to moderate their claims.
 The recent recession in steel-making and the consequent fall in ore demands and the bout of price-cutting has undoubtedly played a part in developing prudence, but many in the Pilbara seem to agree that there has been a wide maturing of relations, based on a new trust developed through efforts from all sides.
 Both management and union officials note each other's growing expertise in their jobs, with management particularly pointing to a reduction in demarcation disputes.
 Mr Parker comments: "Up until 1983, there was little agreement. The range of disputes was consistent with the pattern over the previous 17 years."
 "Ships had to be diverted to India and South Africa. Last year, no ships were diverted. And this year, touch wood, we expect a further considerable reduction in lost man-hours."

Mr Jack Marks, assistant secretary for Western Australia of the Amalgamated Metal Workers Union, says: "Several years ago man-hours lost in disputes were averaging 7 per cent. We expect this to get down to about 0.05 per cent."
 A major catalyst in the Pilbara rapprochement was the formation, a year ago, of the consultative council, which meets in full session four times a year, and more often through its three sub-committees.
 Hailed as a success by its participants almost from its inception, the council proved its worth this year when it toured Brazil to discover what

might be in store for Australia from the major new iron ore mine being developed at Carajas in the Amazon Basin.
 The official report on the visit concluded that Carajas is likely to have a difficult financial history for the first 10 to 15 years, starting at an optimum economic scale of about 25m tonnes, because the real price of ore is unlikely to rise significantly until the mid-1990s.
 However, it warned that, if Brazil does not decide to balance world supply and demand, it could seriously depress the world market price if it did not reduce output at its other mines and increased Carajas production much beyond 35m tonnes.

Brazilian intentions and capabilities are the main uncertainty overhauling Pilbara operations. Government officials in Perth and Canberra as well as company executives believe that Brazil does not intend to disrupt the world market by producing "social metal" to sell more at lower prices in order to improve its foreign exchange earnings.

The Pilbara also takes comfort in the fact that, while Brazil has big reserves of high quality ore, it does not produce in quantity the lump ore needed by the steel-makers for their blends. Furthermore, Brazil's distance from Asia will protect Australia in its traditional Japanese market and its growing South Korean, Taiwanese and Chinese markets.

Nevertheless, the council also discovered that the capabilities of the Carajas operation were extensive.
 There was no doubt that, should Brazil wish, it could launch a serious attack on the world market. The impact was summed up dramatically by an on-site foreman in the Pilbara: "When I saw the photos of guys put up in the Community Hall, I said that, if this is how the developing countries are advancing, then we are in trouble. I would hate to think how much they could produce with their cheap labour."

Steel plans

The other uncertainty exercising the forward-planners is the extent to which steel-making might pick up. Officials in Canberra say there are already some "noises" indicating that Japanese steel-making might in fact again be slowing by, say, 5 per cent to 10m tonnes. There is also concern that the slackening in industrial growth throughout the Pacific Basin could reduce the steel expansion programmes in South Korea and Taiwan.
 Generally, however, the industry believes that the positive factors in the world ore trade outweigh the negatives and that this year's shipments from the Pilbara, including those to Australia's domestic steel industry in the East, will about match last year's record 61m tonnes, which was 5m higher than the previous record ten years ago and worth about A\$1.8bn.
 For Asia, the Australian industry believes that it can maintain its share of the Japanese market. There has been some additional penetration into Japan by Brazil, but this appears to have been at the expense of smaller producers such as South Africa.
 The industry also believes

that the whole of the Asian Pacific area will remain the world's fastest growing market for steel. The consultative council says that present indications still suggest that at least an additional 60m tonnes will be imported by the year 2000, with there being "no reason why Australia should not continue to supply about 50 per cent."
 For China in particular, hopes remain high that the proposed joint venture with Hamersley will go through by the end of the year. The mine would be 60 per cent owned by Hamersley and 40 per cent by China, and would represent the Chinese Government's largest overseas investment other than in property and would produce up to 10m tonnes initially.
 The industry also believes that while China might be reassessing its future spending plans in relation to this project and its proposed participation in re-opening the BEP blast furnace at Kwangnan to supply pig iron, it will in any case still want to organise long-term supplies of ore to meet its aim of doubling steel production by the end of the century.
 In Europe, Australia's intense marketing drive seems to be paying off, with its share of the market rising to almost 15 per cent last year against only 7 per cent five years ago at a time when EEC ore imports from all sources had fallen significantly.
 The Australian industry also believes that because of its current port development, to take larger ships and continued low freight rates to Europe, its prospects are improving.
 Overall, the industry appears convinced that, with the depreciation of the Australian dollar coupled with Asian economic expansion and the improved labour relations allowing for great cost control, it is well-placed to continue to modernise, increase its output and therefore remain competitive.

ANZ and Grindlays. A new force in International Banking has been created.

The Australia & New Zealand Banking Group with its acquisition of the UK based Grindlays Bank, has established a formidable presence on the international banking scene with group assets of USD30 billion.

An asset base that spans the globe with over 1,660 branches and offices in 45 countries, placing the ANZ Group in the ideal position to assist corporations with their particular domestic and international finance requirements.

Both ANZ and Grindlays have extensive experience in international finance and related services, each with over 150 years experience.

This new force is staffed with experienced professionals who can handle all your worldwide banking needs, whether they be cross border or local.

So, if you're looking for a global banking group which is highly respected in international banking circles with the strength, flexibility and professionalism to handle your banking requirements, you can't go past ANZ and Grindlays.

Hartogen drills 250th well

The Hartogen Group has earned the reputation of being one of Australia's most active oil and gas explorers.

The Group has just drilled its 250th well since formation in mid-1968, at a success rate of more than 50%. Up until the beginning of the present decade, resources were concentrated on finding and bringing to production, oil and gas on acreage in the Surat Basin, Queensland. These efforts have seen Hartogen become the supplier of about one-third of the natural gas needs of the Queensland capital, Brisbane, as well as a producer of oil and liquid petroleum gas.

Latterly, the Group has followed a policy of diversification by acquiring new acreage or stepping up activity in existing areas in basins outside the Surat, including acreage in the onshore Gippsland and Otway Basins, Victoria, and the Otway Basin, South Australia.

In the Eromanga Basin (Queensland) permit ATP 299P(A), oil has been discovered at Tintaburra, Talgeberry and Kooroo by Hartogen as Operator for a consortium of explorers. Tintaburra has begun production. Oil is also being produced from two new fields in the South Australian Cooper Basin permit PELs 5 and 6 (Murta Block) - Wancoocha and Muteroo. The fields are close to the Moomba and Gidgealpa hydrocarbon developments.

In another PELs 5 and 6 block, Patchawarra South-West, a number of condensate-rich gas discoveries are ready for development and negotiations are in train to market the gas in South Australia.

As well, gas discoveries in the Queensland Cooper-Eromanga Basin permit ATP 259P, in which the Hartogen Group's Consolidated Petroleum Australia N.L. is a co-venturer, are development-ready and efforts are being made to secure a contract for deliveries to South Australia from 1988.

The Hartogen Group — in the vanguard of Australian oil and gas exploration, development and production.

Exploration rises to record levels

Gold
LARRY KLINGER

ONE NEEDS no more visible proof that the boom is on again than to approach by air remote Kalgoorlie, home of the historical Golden Mile and still the centre of Australia's gold mining industry.

Below, looking like creamy white mesas rising from the desert in a John Ford movie, these mile wide plateaus of siliceous waste rock, built in previous golden heydays, are being mined again.

It is as if Jack has climbed the beanstalk and is searching for the goose by sifting through massive 60-ft high rubbish bins. Rising world gold prices and greatly improved extraction methods, mean that there vast tailings dumps—many of which were previously retained when their gold content was nine to ten grams per tonne—are now being reworked.

The Western Australia Government, which is conducting a feasibility study on treating the more than 50 dumps, owned by the state, reckons they may hold recoverable resources, worth upwards of A\$500m.

A much more important development, however, (and for the same reasons of acceptable world prices and lower operational costs) is that not only are the Golden Mile's primary deep shaft mines in full swing again after the serious shutdowns in the 70s, but new open cut operations, of relatively low-grade ore, are mushrooming up throughout the state's goldfields.

The results are impressive.

Western Australia, which accounts for well over 80 per cent of the country's total output, has almost trebled gold production in recent years from 11.2 tonnes in 1980 to 32 tonnes last year. Production this year is forecast at 39 tonnes, and could rise on present trends to 46 tonnes in 1987 and possibly even by 75 tonnes if some of the more marginal projects get under way.

This year's output is forecast to be worth about A\$570m, considerably up on last year's A\$420m.

Ten major operations were launched last year, there will be six this year, and another four or five are expected to open in 1986. Expenditure on exploration in the state is thought to be annually at about A\$100m, against only a fifth of that five years ago. Direct new investment in operations over the past two years, is estimated by Mr David Parker, the state's Minister for Minerals and Energy, at around A\$370m a year.

Great expectations are not confined merely to the traditional areas in central Western Australia. For example, the Worsley partnership's projected Boddington project, just south of Perth, where significant gold reserves have been discovered in conjunction with major bauxite resources, foresees a 15-year mining operation. The A\$10m project has already been hailed, though perhaps prematurely, as "the launching of an area to rival that of the Golden Mile itself."

"Western Australia at the moment is a real little goldmine," says Mr Parker. Certainly there is no holding the industry at the moment. The only trouble with gold, is that

Test drilling for gold at the Black Flag prospect, near Kalgoorlie

the situation can change every ten minutes or so."

Indeed as investors large and small have discovered over the centuries, predicting the price of gold is somewhat difficult. However, the miners who are today involved in their highest production levels since 1941, coupled with their most active exploration in recent years, are probably more pragmatically confident now than ever before. The reason is simply that the price of gold is far from its potential peak, and in terms of Australian dollars, it is well above levels that make production profitable.

Market prices over the past few years have been running steadily at between A\$350 and A\$500 an oz. The 800-member,

Perth-based Gold Producers' Association, which markets between 60 and 70 per cent of Australia's output, reckons that A\$400 for deep-cut and A\$250 to A\$300 for open-cut gold, are "healthy" for most operations.

Key question

There is some concern that the international gold market might predetermine too much on the troubles in South Africa, the world's biggest gold producer, and that the rush to open so many small mines could again create some over-supply. But most stockbrokers are still recommending "selective purchases" of Australian gold shares.

The only immediate concern

that is truly exercising the industry is over whether the Federal Government will decide to end Australia's tradition of not taxing gold production. The proposition to tax the industry is again under active consideration, but it has consistently been defeated in the past. This time will probably be no exception.

Canberra estimates that the abolition of tax exemption would yield A\$90m in its first year, and A\$100m annually thereafter. The industry, strongly supported by the Western Australia Government, maintains that the real effect would be to cut net federal revenue by at least A\$60m a year as a result of increased unemployment and the consequent loss to income tax and the expansion of social security expenditure.

Western Australia argues that the industry — one of the few which is actually showing substantial growth — would be severely curtailed if a tax were imposed, especially since all the present gold mining ventures have done their sums on the basis of a zero tax rating.

It claims that A\$420m worth of exploration, would be abandoned, some existing mines would close and 350 jobs in the industry would be lost, as well as up to 400 further jobs involved indirectly with mining.

Mr Brian Burke, Western Australia's Premier, told the Federal Government's recent tax summit, "The proposal boils down to simply this: every other mineral resource is taxed, so there is no reason why gold should not be taxed, as well. But the intellectual integrity of that argument, is contradicted in the practical application."

Probably the most telling reason why the proposition is again expected to be scrapped, is the potential political cost. MPs, at both state and federal level, would almost certainly lose their seats at the next elections if the plan goes ahead.

"Five times the Federal Treasury has said we must tax gold, and each time they recognise there was a significant political problem," says a top executive of one of the leading mining companies. "We are prepared to put our hand into our pocket and fight this to the end. We obviously believe that it is quite winnable."

"For the moment, the industry is in mint condition," says Mr Parker, using the bon mot to introduce one of the states' pet gold mining schemes — the production of a 1oz coin to compete against South Africa's Kruggerand, Canada's Maple Leaf and other bullion coins.

Would Australia's gold coin bear a kangaroo?

That question still has to be decided—even its name was still under discussion. One side, though, would have a portrait of the Queen, since the coin would be legal tender. "We think there is a substantial international market and would like to be producing our coin in a few months time, certainly by the end of the year," he says.

The gold coin will be produced at the revamped Perth mint in Kalgoorlie. It is hoped that, initially, the coin could command 10 per cent of the world market—that would be between 200,000 and 500,000 coins, requiring at least another 10 tonnes of gold a year which, jokes aside, is an laughing matter.

Open-cut coal-mining in central Queensland: this massive \$26m electrically-operated walking dragline can remove up to 49 cubic metres of earth in one bucket-load

Still top of the world's export league

Coal

LACHLAN DRUMMOND

THE AUSTRALIAN coal industry is allowing itself the faintest glimmer of a smile at the prospect of substantial—and hopeful—sustainable—profitability returning to the industry.

After a costly expansionary boom to production in the early 1980s, the downward shift in the Australian dollar this year now promises to provide the return to justify partly the outlays of close to A\$50m in the past four years to open new capacity and to boost output and productivity in existing mines.

For much of the past year the miner's have been concentrating on ensuring that the additional capacity is translated to sales volume to generate the cash flow necessary to service the largely debt funded expansion.

The result has been a further diversification of markets away from the traditional Japanese steel and power companies, although these markets remain the chief destination for Australian coking and steaming coal exports.

It has also seen total production and export volumes at new peaks, with the June 30 annual total of exports climbing by 17.3m tonnes to 88.6m tonnes from the Queensland and NSW coal mines which serve the export markets.

At that level Australia again topped the world export trade, displacing the traditional biggest exporter—the U.S.—which has seen volumes drop from a peak 100m tonnes in the early 1980s to less than 70m tonnes in the face of strong U.S. dollar.

With these rates of export coal is expected to bring in \$4m or more in export income this year, making it the single biggest export industry.

Within the national total Queensland emerged as the dominant Australian producer with a 12.4m tonne rise to 48.5m tonnes, reflecting that the state has been the site for most of the large scale new capacity expansion.

During the year the MIM group's steaming and coking coal mines moved towards their 6m tonne a year capacity while the Blate Athol and Curragh projects moved towards planned output rates of a combined 8m tonnes or so.

New markets

In NSW, exports were up 4.9m tonnes to 38.5m tonnes. Of the combined exports, the Japanese intake was up 5.7m tonnes to 43.9m tonnes, but the Japanese share of the total was down from 57.4 per cent to 52.4 per cent.

This reflects efforts to diversify markets and reduce dependence on the hard-bargaining Japanese, who in diversifying their own sources of supply by sponsoring coal developments in North America and South Africa have contributed to the gross over-supply and tight pricing in world coking coal and the more modest over-supply in steaming, or thermal, coal.

In both cases the Australian industry is believed to be running at about 70 to 75 per cent of technical capacity, with the steaming coal industry said to be running up against its economic capacity and requiring further price rises before adding additional shifts to lift output.

European and north and east Asian countries have been the mainstay to the diversification and are seen as providing the best hope for future volume growth, particularly in steaming coal, where the general market outlook is stronger than for coking coal.

For the current year, Australian Coal Association economist Mr Warren Bennett, says for 1985-86 exports should be stable or up slightly because of forecasts of reduced Japanese steel output and slightly lower European production.

A variance in the market outlooks has also been reflected in world prices for the two main coal types, with hard coking coal exporters having to accept late in 1984—three

months ahead of schedule—a rolling over of prices based on a U.S.\$52.50 a tonne standard. At the time, that represented just under A\$60 a tonne, while with the current weakness of the local currency it is now translating as a more palatable A\$75 a tonne.

Soft coking coal producers in April accepted unchanged U.S. dollar prices of U.S.\$44.50 and U.S.\$44 for the two grades of soft coking coal, worth around A\$64 a tonne, after the Japanese extracted the same no-change price from South Africa. While the Japanese mills offered no compensatory tonnage increases, the shift in Japanese steel-making practice to the lower priced soft coking product has the NSW soft coking producers running hard to meet demand.

The steaming coal producers—which price in Australian dollars with reference to U.S. dollar spot prices—meanwhile won half that they sought by taking prices to a range of A\$46.17 to A\$50.17 from the previous level around A\$45 a tonne, a large minority secured in a two-year contract with Japan's electric power development company allowing adjustment up or down for exchange rate movements and for cost increases.

The effects on an industry—both coking and steaming—generally running slightly above or below break-even should be dramatic, although those in the industry are wary of sounding too confident lest the hoped for recovery in profits be sapped by rising wage demands or additional imposts from the various levels of government.

Big impact

The shifts in prices and currency came too late to impact greatly on the 1984-85 returns, which can be expected to show little overall improvement from the 1983-84 position, when aggregate profitability of 39 companies representing 83 per cent of black coal production was stagnant at A\$218m net compared with A\$216m in the previous year and A\$178m in 1981-82.

That result represented a return on shareholders' funds of only 5.5 per cent, down from 7 per cent and 6.9 per cent in the previous two years and an effective return on total assets employed of 4.2 per cent compared with 1.8 per cent and 5 per cent. Although total profits may increase slightly, the profitability measure is unlikely to show any growth until the current 1985-86 year.

Existing royalties and taxes in 1983-84 accounted for A\$364m of total operating profits of A\$388m by the main export members of the industry in 1983-84.

Additionally, the industry has moved to drive down its operating costs, in part through workforce reductions and through increased introduction of high productivity longwall mining equipment in underground operations.

The general shift to open cut for new mines has also dramatically improved overall per man output, rising from just under 2,500 tonnes per man year in 1980-81 to almost 3,250 tonnes in 1984-85, with a further rise forecast for the latest year.

For the future in the industry has as its brightest prospect forecasts that the current world over-capacity in steaming coal will be replaced by a small excess of demand by 1990 or the early 1990s.

Hopes are tempered by the continuing over-capacity in coking coal for thermal coal, a step which could lead to a substitution of unwashed coking coal for thermal coal, a step which would reduce the pricing pressures on steaming coal.

Equally, the main Japanese market is planning for a sharply increased intake of liquefied natural gas to fire power stations and has an expansionary nuclear power generation program which could act to dim coal's prospects.

All of which should lead to a continued emphasis by both branches of the black coal industry to find buyers in non-traditional markets and to participate fully in the non-Japanese Asian growth in steel and power generation.

A THIRST FOR BEING FIRST

At Bond Corporation we seem to be best-known for the achievements of our chairman, Alan Bond. There was that little matter of winning the America's Cup, after all...

But we're just a bit surprised, because there is rather more to Bond Corporation than a yachting trophy. Even if it does happen to be the most coveted one in the world.

That historic victory was only one expression of the philosophy of the Bond team — that success depends on ideas and hard work.

It's a practical philosophy. For instance, our Bond people have:

- Developed Western Australia's first offshore oilfield (it goes into commercial production in March, 1986).
- Produced the world's first full-flavoured, ultra-low alcohol beer — Swan Special Light.
- Introduced the technology to give some of the world's most isolated communities an international television service equal to the best anywhere.
- Helped Britain's Airship Industries Ltd. to adapt today's technology to one of yesterday's great ideas and build airships that have won worldwide interest.

Our people worked for months to find the way to gain a controlling interest in Castlemeane Tooheys in Australia's biggest-ever takeover bid. Now the Bond team is even bigger and better and another part of our long-term plan is in place.

With all this — not to mention our people's performance in property development, coal mining, retailing and many other fields — is it any wonder we're surprised that we're still known best for the America's Cup?

BOND

THE HAWK GROUP

HAWK INVESTMENTS LIMITED
SONS OF GWALLA N.L.
A.R.I. LIMITED
OPENPIT MINING & EXPLORATION PTY. LTD. (50%)
INVINCIBLE GOLD N.L.

Head Office:
28 Ord Street, WEST PERTH, WESTERN AUSTRALIA 6005.
Telephone: (08) 321 6523. Telex: AA 95797. Telefax: (08) 481 1271.

HAWK INVESTMENTS LTD

Hawk Investments Limited is the largest shareholder in Sons of Gwalla N.L. holding 42% of its issued capital. The Company also holds 50% of Openpit Mining and Exploration Pty Ltd's issued capital (which in turn holds 31% of Invincible Gold N.L.) and 17% of A.R.I. Limited. Hawk Investments Limited is actively involved in gold exploration in Western Australia both on its own account and through its shareholdings in other companies. The Company also continues to develop the Bald Hill tantalite deposit (with A.R.I. Limited) where exploration to date has outlined a resource of 435,000 tonnes grading 0.068% tantalite pentoxide.

Sons of Gwalla N.L.

Fine gold production for the financial year ended 30 June 1985 totalled 40,368 ounces. Sons of Gwalla N.L. reported an operating profit of A\$9,941,186 equivalent to 35.07 cents per share in earnings. A final dividend of 8.5 cents per share has been recommended making a total of 16 cents per share for the year.

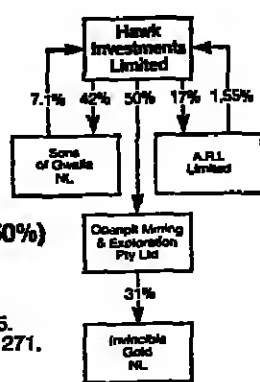

Current throughout at the Company's operations is 400,000 tonnes per annum. The Company has recently commissioned a second 150,000 tonnes per annum gold treatment plant adjacent to the existing plant. Initially, this will be utilized to treat ore from the King of the Hills Mine in Joint Venture with Kulim Limited where a resource of 230,000 tonnes grading 5.8 g/t gold has been outlined. The parties will share in gold production from the venture.

The Joint Venture on the Sons of Gwalla Tailings Dump is proceeding and a 1,000,000 tonnes per annum treatment plant will be commissioned in March 1986. Sons of Gwalla N.L. has entered into a number of other joint ventures including the promising Saburan Gold Joint Venture in Sarawak, Malaysia.

A.R.I. Limited

A.R.I. Limited has a significant indirect involvement in petroleum exploration and production, and is an active gold explorer. The Company holds a 0.75% royalty converting to a 4% net profit interest after payout over ATP's 298 and 299 (A & B) in the Eromanga/Adeleide Basins of central Australia. These permits include the Tintabarra and Teligerry oil discoveries — a recent legal decision has confirmed the validity of the Company's royalty interests. In conjunction with Sons of Gwalla N.L. the Company is acquiring an interest in the Saburan Gold Joint Venture in Sarawak, Malaysia.

A.R.I. Limited also holds significant shareholdings in Orca Petroleum N.L. and McMining N.L.

Angry farmers say 'We're going broke'

Agriculture

MICHAEL THOMPSON-NOEL

HOW times change. In its manifesto for the 1910 general election, the Australian Labor Party declared that "the foundation of all national greatness and prosperity must rest upon some form of agriculture or pastoral pursuits."

Seventy-five years on, the Labor Party is out of favour with the farmers (as are the other two main parties), and Australian agriculture is in trouble — partly, it says, because Australia's urbanised masses and political bosses have turned their backs on the land and are out of sympathy with the farmers' claims that Australia's "great natural advantages and resources are being squandered."

The potential is shackled

In the view of Mr Ian McLachlan, president of the National Farmers' Federation (NFF): "The rural sector has the capacity to contribute greatly to economic growth and employment, but that potential is being shackled."

For perspective, Australia is among the world's biggest exporters of wheat, wool and beef. In 1984-85, Australia's farm exports earned A\$10.5bn (\$5.3bn), which was a good slice of total exports.

According to the Bureau of Statistics, the total number of agricultural establishments is 178,700, averaging 2,723 hectares (A hectare is 2.5 acres). These employed in farming total 373,100, against total Australian employment of 6.5m.

Australia is the world's driest continent. Of the 65 per cent of

land in Australia utilised for farming, less than one-tenth is devoted to crops or sown to pastures.

Of Australia's total area, 63 per cent is covered by desert or semi-arid zone soils and another 14 per cent by shallow stony soils on mountainous country, leaving only small percentages where relatively fertile soils occur in areas of good rainfall. Drought, fire and flooding are common hazards. Despite the bleak physical environment against which many have to battle, Australia's farmers are highly efficient.

The eclipse of the Australian farmer sector has not happened swiftly, nor is it accepted by the Government that farming is in "crisis". At the start of this year, the Minister for Primary Industry, Mr John Kerin, told a farm conference in Canberra that the best thing a federal Government could do for farmers was set the economy right.

"A farm inflation rate of 5 per cent is better than the doubling of farm costs between 1977 and 1982," said the minister, "and (better than) the farm inflation rate of 12 per cent in 1982-83."

He said that Labor's prices and incomes accord with the wages explosion of 1981, and that economic growth of 4 to 5 per cent was better than the negative growth rates of the early 1980s.

"The Government has to continue to bear down on inflation and to stimulate growth at the same time as holding down the budget deficit," Mr Kerin told his audience, few of whose members seemed at all impressed.

"It is for this reason I cannot meet the demands by specific primary industry groups for hundreds of millions of dollars," he said.

Since then, farm militancy has grown enormously, with Mr McLachlan, a 48-year-old South Australian woolgrower who moves smoothly between farming, politics and business (he sits on the board of Elders-ILX, the big pastoral-to-finance conglomerate), firing up the farmers and organising protests. In 1983-84, Australia's main exports to the Middle East were wheat, barley, live sheep meat and dairy products.

Despite such successes, Australian farmers claim they are being squeezed by rapidly rising costs.

"Costs on average," says the NFF, "are rising two-and-a-half times faster than prices received by farmers."

Before the Australian federal budget, on August 20, the NFF listed some of its main objectives:

First, it demanded that 1-1-1 remove "stifling impositions on exporters" including all taxes on petroleum products used in farming and all tariffs on imported farm equipment and parts, chemicals and animal health products.

In the budget, Labor did indeed offer some concessions. It decided to rebate in full the diesel fuel excise for farming, fishing and forestry uses.

To a farmer using 15,000 litres of fuel per year that means a saving of A\$850 a year. And the Government agreed to remove remaining duties on imported grain harvesters and provide local producers with an equivalent level of assistance by way of a bounty.

According to the Government: "In the climate of budgetary restraint, the full farm cost package, which will

trade system cannot afford to be fobbed off with another unsuccessful ministerial meeting, or with general hand-on-heart statements that fail to halt the juggernaut of protectionism."

It is worth recording, however, that difficulties in some markets have pressured Australia into diversifying its export drive — with some success. For instance, Mr John Menadue, the Australian Trade secretary, said last month (August) that Australia's exports to the Middle East had risen from less than A\$135m in 1972-73 to around A\$1.7bn in 1983-84, when they accounted for 6.9 per cent of total Australian exports and to a provisional A\$2.2bn for the first 11 months of 1984.

In 1983-84, Australia's main exports to the Middle East were wheat, barley, live sheep meat and dairy products.

Despite such successes, Australian farmers claim they are being squeezed by rapidly rising costs.

According to the Government: "In the climate of budgetary restraint, the full farm cost package, which will

from the broad-acre cropping industries, as well as the sheep and cattle industries. The demand was mainly for medium to long-term lending for capital purposes, of which land purchase headed the list — an observation Canberra will have listened to with interest.

The core of the NFF's complaints against Government policy was hammered out by Mr MacLachlan at a farm conference in Adelaide on July 30: "The real issue facing farmers, and indeed all Australians," he said, "is the over-increasing share of national wealth government is taking into itself. Only two figures are needed to illustrate this. In 1953-54, total government outlays (federal, state, local and public authority capital expenditure) were 27 per cent of gross domestic product. In 1983-84, 30 years later, it was 42 per cent of gdp.

"To help finance this extravagance of bigger and bigger government, total public sector borrowing has skyrocketed. It's risen from A\$807m in 1973-74 to A\$14.8bn for 1983-84 — over 1,800 per cent in just ten years."

From the above quotation, it is clear that the NFF is not afraid to scrutinise the big picture, nor to mix its palette boldly.

Reasons for the gloom

In its most recent review of the rural economy (August 1985), the Bureau of Agricultural Economics (BAE) predicted a fall of A\$650m in gross farm product in 1985-86, to A\$8.55bn, plus an expected 6 per cent rise in farm costs. A combination of the two will produce a 22 per cent fall in the net real value of farm production between 1984-85 and 1985-86. At the same time, the value of farm exports is expected to be cut by about 2 per cent to A\$10.7bn.

The main reason for the gloomier farm outlook is the expected significant fall in value of the wheat crop, with production likely to fall by about 3.1m tonnes to 15.8m tonnes. The outlook is better for livestock.

The BAE's main forecasts included these: Wheat: gross value of the 1985-86 crop could fall from A\$3.44bn to A\$2.94bn in 1985-86 (—17 per cent). Wheat prices in Australian dollars are forecast to be somewhat lower than last year, as the deterioration in the international wheat market has more than counterbalanced the beneficial effects of the depreciation of the Australian dollar.

Projected 1985-86 (October-September) exports are 15m tonnes, 5 per cent lower than expected 1984-85 exports (15.8m tonnes).

Wool: sheep numbers at March 31 1985 were about 151m, up 12m on the previous season. Shorn wool production in 1985-86 is expected to be about 1 per cent up by weight on 1984-85 for a gross value of about A\$2.58bn, up 7 per cent.

Says the BAE: "The increased

AUSTRALIA 13

Australia's BHP makes some spectacular leaps abroad.

Big drive into foreign markets

Profile: BHP
GORDON CRANE

THE BROKEN HILL Proprietary Company (BHP) is the Ayers Rock of Australia's corporate landscape. The younger of the two monoliths is now 100 years old. It looms at least as large in its surrounding terrain, is accorded similar reverence by the local populace, and has recently been proving as changeable in hue.

Prime Minister Bob Hawke paid his respects at the BHP centenary celebrations in Melbourne last month to the company which has not only held long-standing command over the country's steel industry—accounting for 89 per cent of all steel sold in Australia—but, aided by a few vast-scale acquisitions, has also become a heavyweight in coal and metal mining, and particularly in oil and gas which now provide two thirds of its earnings.

Mr Hawke, whose previous encounters with BHP had been as president of the Australian Congress of Trade Unions, was required to tread more carefully than most. "I would hesitate," he said, "to offer a new endorsement. What is good for BHP is good for Australia. But it is true that their futures are closely intertwined."

One vivid verification of this came in 1982, when a shake-out in the world steel industry brought the closure of large parts of BHP's prime Newcastle works and thousands of redundancies.

Many of those jobs will not return, although the company expects to ship a near-peak 9.2m tonnes of steel in its current year and is spending \$1.5m a day on the division. As Mr David Rice, who heads BHP Steel International, describes it: "We are not investing in capacity, we are investing in efficiency."

Pivotal role

Another illustration, more recent and more cheerful, of BHP's pivotal position in Australia's economic equilibrium was the commencement in August of work on the export phase of the \$1.1bn North-West Shelf energy project, which the group now controls jointly with Shell.

BHP's share in Woodside Petroleum, operator of the Shelf, is valued at some \$3.16m. But the company's most spectacular leaps have been made abroad, notably the US\$2.5bn purchase of Utah International of the U.S., completed 18 months ago. The word "international" is now a common appendage of BHP divisional titles too, and corporate promotion as "the Big Australian" has been supplanted by the more outward-looking "Australia's BHP". The drive into foreign markets is on.

The mission, a product of this decade, has behind it a special impetus. Oil production in the Bass Strait fields between Victoria and Tasmania, discovered in 1965 and operated in partnership with Esso Australia, is due to tail off sharply from 1988.

The 500,000 barrels a day it currently provides (averaging 375,000 b/d over the last 10 years) account for 90 per cent of Australia's crude output, and BHP's half share is the only significant earnings source of a division which in the year to May brought in \$484.7m of the group's overall \$477.2m net profits.

Although production from the 12 platforms is at record levels, and the operators are still examining possibilities for developing further fields in the area, they are resigned to the fact that any new reserves there are likely to be small and exploitation costs guaranteed to be proportionately large. Existing reserves of some 1.46bn

barrels are expected to be halved by the mid-1990s.

The North-West Shelf should be fully on stream by 1992, but Mr Russell Fynmore, general manager of BHP Petroleum, acknowledges that cash flow from there will make up for only a part of the decline in Bass Strait revenues. The rest will have to come from "other parts of Australia and overseas."

The view was given substance when the company paid U.S.\$504m for Energy Reserves Group (ERG), a Kansas-based explorer. The deal came just seven months after absorption of Utah, which had at one stroke internationalised its involvement in coal and metal mining.

The striking feature of the ERG deal, however, was not its timing or its size, but the motivation behind it. Mr Fynmore says disarmingly: "It was the management team we were after. The reserves, although nice, were secondary."

The exercise illustrates both BHP's potential to become what one Sydney broker terms the Eighth Sister of the world oil industry, and the ability of its balance sheet to withstand such leaps of faith along the way.

ERG, since renamed BHP Petroleum (Americas), is already a happy fit as the oil and gas wing of Utah. For Utah itself, though, a planned inte-

gration into BHP Minerals has still to be tackled and will be accompanied by some awkward management problems.

The reason is that, while ERG was a purely American company, Utah has a long-standing presence in Australia, through six coking coal mines in the Bowen Basin, halfway up the Queensland coast, which are its main earnings contributors. While these complement BHP's own coal, iron ore and manganese activities, the managerial units do not—duplication of posts and imbalances in career structures are freely acknowledged.

These extend in some form from boardroom to pithead and beyond the working day—in Moranbah, a Queensland town which houses employees both of Utah's Blackwater open-cut coal mine and the neighbouring Riverside operation under BHP Minerals, the Utah mine managers have spacious homes provided on "Sach Hill," and the company mows the lawn. Their Riverside counterparts live in town.

A merger of the two is due to be effected within the next 12 months, and it remains even to be resolved whether the new unit will be administered from Melbourne or from Utah's base in San Francisco. Overseeing the process is Mr David Adam, BHP's corporate affairs director. He agrees that the period will be difficult, but adds bluntly that BHP Minerals on its own "has nowhere much to go."

"There will be some pain as it occurs. The most painful things should happen fairly quickly."

The inference is that the Utah structure will survive the more intact, and there is of course no question that it was not worth this pain. The maiden contribution of the U.S. company to BHP net profits was \$140.5m and it had already provided the route for BHP to take control in July of the world's largest

known copper reserve which remains undeveloped, the Escondido complex in Chile.

If an international dimension to its activities is seen as the key to future prosperity, then the caveat must be entered that not all such moves have brought the rewards expected of them. BHP is hoping to achieve with Escondido what has not yet materialised from Ok Tedi in Papua New Guinea, another vast-scale copper deposit but one which has been plagued by delays. In its latest set of accounts, BHP wrote off at \$597.5m the entire value of its 30 per cent stake.

On the acquisition front, in Mr Adam's words: "We have had a couple of lucky misses. We have also had some unlucky hits."

Both categories of infelicity have been exceptions, though, and the moves abroad have left the company with as much as 18 per cent of its assets—or some \$32bn—outside Australia. Nearly all these are in the U.S., and once dollar-related steelworks to become BHP's managing director in 1982. Has been with the company for 31 years—by no means uncommon for an organisation which was once seen as an extension of the civil service.

He is known for a ready supply of cold water to pour on more outlandish expansion plans offered by subordinates, but happy that the great leaps forward have happened under his stewardship.

His style: patrician, can seem offhand; more at home with production reports than parties. A more relaxed attitude detected recently, and the occasional jaunty rejoinder: those keen to bear a diversification agenda are told, "I don't think we have carried out our baby carriage or biscuits."

Trading "is a part of the business that we are developing," but no one should get fancy ideas.

"We don't envisage ourselves being a Mitsui of this world—that is not within our competence."

The point has force. Outside Australia BHP has well-honed but, equally, well-delimited areas of expertise, and to stray very far beyond these would be a bit too wildcat for its style or for its shareholders' tastes. Domestically, meanwhile, its major constraint in many potential new areas is, perversely, its sheer size.

Defences

Integrating the steel division too far downstream, for example, could bring it into conflict with the handful of rivals to Tubemakers, its steel pipe and tube associate. A banking role in that newly deregulated industry—where it is arguably far better placed than the heavily borrowed Elders IXL, which wants one—is rejected on the grounds that it would disrupt the existing looser links between BHP and many banks operating in the country.

The desire is not just to be the genial giant. A company with BHP's special position in government rehabilitation programmes for the steel sector would do well to avoid incurring official opprobrium, for a start. And with the sporadic, if so far futile, bid forays by Mr Robert Holmes à Court—and around a quarter of its equity now held abroad—the group needs to maintain a sturdy structure of institutional defences against Australia's BHP "becoming someone else's BHP."

Broken Hill broken up may be heresy to most, but to some unbelievers the prospect has an allure.

● BRIAN LOTON, aged 56, came through the Newcastle steelworks to become BHP's managing director in 1982. Has been with the company for 31 years—by no means uncommon for an organisation which was once seen as an extension of the civil service.

● DAVID ADAM, 18 months Loton's junior, has been general manager in charge of corporate affairs for more than a decade. A solicitor by training, that is still part of his function. More importantly, as the only other senior manager on the main board, he is both BHP's policy co-ordinator and its public face.

Joined BHP in 1971 from a Melbourne law firm, but clearly prefers innovation to intricacies. Affable by nature, went down well with London institutions during a BHP investment "roadshow" earlier this year.

Getting the share price up "is a mission he happily acknowledges. Thinks corporate attitudes are still somewhat out of synch with the world force BHP is becoming—'We have to manage our own destiny a bit more,' he says."

Where do the futures traders go when they finish trading on the US Exchanges?

They go to Sydney. It's the first "open outcry" market to open after the US ones close.

In fact, the Sydney market opens hours earlier than any of the Asian ones do.

And with Comex Link planned for early 1986 you'll be able to trade the Comex gold contract on the floor of the Sydney Futures Exchange.

Along with All Ordinaries Share Price Index, Gold, Silver, US Dollars, Australian Commonwealth Treasury Bonds, 90-day Bank Accepted Bills, Wool and Trade Sevens (live cattle).

All of this combined with Sydney's Exchange Traded Options on 90-day Bank

Bills, US Dollars and Share Price Index Futures makes futures trading in Australia an even better proposition.

For more information contact the Sydney Futures Exchange, 15-15 O'Connell St., Sydney 2000, Australia. Telephone (02) 253 7633. Telex No: AAL26713. Cables: "Sydfutures" Sydney. Fax: (02) 253 6226.

Sydney Futures Exchange.

MORE LOCATIONS. FEWER DISLOCATIONS.

Success in international business has a lot to do with having the right connections.

And very few banks indeed can offer you as many as Standard Chartered.

As one of Britain's largest banks, and specialists in international business, we have over 2000 branches in more than 60 countries. All linked by common systems and the latest in telecommunications technology. And all staffed by people to whom international trade is a way of life.

The result is that when you deal with Standard Chartered, you deal with people who understand

your problems—and can supply solutions.

Delayed payments become an occasional rarity, rather than a constant headache.

International cash management that enables you to use funds more efficiently becomes a reality, rather than an objective.

And whether you need a more competitive foreign exchange dealing service, better-tailored trade finance, or more productive advice and introductions around the world, you'll find the service you want under one roof.

Ours.

Farm militancy is growing

CONTINUED FROM PAGE 12

quantity of wool purchased at auction, the reduction in Australian Wool Corporation stocks (to an end-season balance of just under 1m bales), and the increase in prices largely reflect the depreciation of the Australian dollar and continuing economic growth in the major wool-consuming countries. These variables will again be important determinants of wool demand and Australian wool exports in 1985-86.

● Beef and veal: cattle numbers are expected to rise from 23m to 23.7m by next March. Australian slaughter prices for cattle are expected to show an increase of 14 per cent, aided by an expected lower U.S. Australian average exchange rate than in 1984-85, and a recovery in the U.S. market for imported beef.

● Dairy products: exports will be sold on a very depressed world market, and little improvement in average fob values is expected.

● Sugar: total returns to the Australian sugar industry are forecast to decline from \$590m in 1984-85 to \$570m.

Earlier this year, in a detailed

Sheep farming in Victoria. Shorn wool production may be up about 1 per cent this year

study of Australian agriculture, Dr Andy Stoeckel, director of the BAE, had this to say: "The challenges for Australian agriculture are not short-term, and there is no panacea for immediately improving the current situation of low farm incomes. To improve the income situation of farmers there will need to be progress in all areas where policies have a bearing."

The five policy areas he dis-

cussed were trade, broad macro-economic policies as they affect interest rates and the exchange rate, the lowering of off-farm costs through greater efficiencies in the institutions servicing agriculture, on-farm productivity growth, and rural research and extension.

A list like that ought to keep Australia's farm leaders busy, whatever government is in power.

Gearing up for year of the cup

The defence in Perth next year of the America's Cup, the yachting world's oldest trophy, will be the biggest international sporting event ever seen down under, as Keith Wheatley explains here.

FEW SPORTING events generate the level of emotional intensity that the America's Cup routinely creates. The savage man-to-man combat of 12-metre match racing, against a backdrop of national pride and millions of dollars, is heady stuff.

John Bertrand, the helmsman who won the cup for Australia aboard Alan Bond's boat, *Australia II*, was still having bad dreams about the Rhode Island start line three months after the event.

"I'd be trying to cross Liberty's bow and missing her by an inch. I could hear the sound and swish of the waves," recalls the Melbourne sailor. "I could hear that American drawl 'we're coming to get you guys' and I'd wake up in a cold sweat."

Two years ago this week, Bertrand held the Auld Mug aloft at Newport. The night-mares have stopped now, but the emotions are still pumping. His autobiography, *Born to Win*, published on October 6

in the UK, has caused his former crewmates to send Bertrand to Coventry.

Designer Ben Lexcen, creator of the winged keel, plans to sue Bertrand and patron Alan Bond says he "tossed the book in the bin." The skipper's \$5250,000 contract to help Bond defend the cup looks doomed.

Born to Win may smack of egomania to most tastes but it does give a fascinating glimpse of how yachtsmen, millionaires and, finally, the public became gripped by the battle for yachting's oldest trophy. It may also help explain why its defence in Perth, Western Australia, from October 1986 to February 1987, will be the biggest international event ever seen down under.

Three separate government-backed surveys have indicated that Western Australia can expect slightly over 1m interstate and overseas visitors in the year of the cup. On standard industry projections, they would spend \$478m. But in the dry phases of the Western

Australia's Tourism Commission's marketing report, "a very high proportion of the international visitors will be corporate-sponsored with substantial financial commitments to accommodation, boat-charters and hospitality. An abnormally high visitor spending rate will apply during the period October '86 to February '87."

Airport

In other words, the world's wheelers and dealers, movers and shakers are coming to Perth. Alan Bond once described the America's Cup as "essentially a marketplace. It's where very successful men come to be with other very successful men. And where men who would like to be successful gather on the periphery."

In order to shelter these corporate giants, new hotels are coming up like mushrooms. Perth now has more five-star hotels than any other Australian city—and the lowest

population. Although occupancy rates are fragile now, rates of A\$300, treble the normal price per night, are being quoted for those lucky enough to find a booking.

Government officials tend to look at what they call "negative reports" of scalping over accommodation. But everyone near the action knows it is happening.

Fremantle, the Victorian port city at the mouth of the Swan River and 12 miles from Perth, is where the 20 or more syndicates will be based. Racing will take place five miles offshore, in the lee of Rottnest Island, a holiday playground once owned by gossip columnist Nigel Dempster's forefathers.

Fremantle is a free-market place at present. There are building sites everywhere. Alan Bond recently stopped work on a development of 45 luxury townhouses, facing the ocean. Construction costs had risen from A\$3.5m to A\$4.5m in three months.

With no Rent Act or equivalent statutory controls, tenants have no security in Western Australia for about one-third of the town's 20,000 population, is growing. Foreign media, yachtsmen and businessmen are leasing houses that now command A\$100 per week for 20 to 30 times that sum during the six months of the cup.

For the very cream of the corporate world hotels and rented houses are not really an issue. Nearly 200 of the world's finest private luxury yachts are booked into moorings around Fremantle, Rottnest Island and neighbouring Garden Island. It goes without saying that each group of new moorings will have its own helipad.

Probably the most famous of the private yachts en route to Australia—and many of the Americans are already island-hopping across the Pacific—is the Gnocchi family's three-masted schooner, *Cresida*.

Once owned by Stavros Niarchos, the 210ft yacht is currently undergoing a \$2m refit in Italy, prior to her voyage. She will have a professional crew of 15.

Still on the water, Westpac Banking Corporation have chartered the 4,000-tonne liner, *Sea Goddess*, to use as a floating hospitality centre for the five months of racing. She will be based in Fremantle Harbour and go out each day to watch the sailing.

Yachtsmen out in force on the Swan River, Perth. New airport and hotel facilities are being prepared for the big build-up to the America's Cup year. Perth already has more five star hotels than any other Australian city

Westpac also plan to turn a cityside wharf into a conference centre. The cost, in total, is likely to be around \$5m, but the bank says it wrote that much business in 20 days aboard a small chartered boat in Newport during the 1983 campaign.

The *Sea Goddess* will not be alone in Fremantle Harbour. Eight other major cruise ships are expected for at least part of the racing including the QE2 and the *Combermere*.

Including crews, the population along the Victoria Wharf during the 15 days of the final race series is expected by the city council to be around 20,000—only very slightly less than Fremantle's normal population.

Pressure

Not all the action is on the water. Perth is having what virtually amounts to a new airport for the cup. A new control tower, main runway, and international terminal are currently under construction and open in early 1986. There is huge political pressure locally for de-regulation of the airline business.

This is having some success. All-Nippon starts charter flights to Tokyo, the first direct flights to Japan, in October. Barrack Group, the corporate vehicle of entrepreneur Dennis Horgan,

have applied for permission to run daily charter flights to Singapore during the cup period.

In the scheduled sector, Qantas has just announced another 1,500 seats a week into Perth. British Airways, which presently have around 60 per cent of the international traffic out to Western Australia, have already announced one extra flight per week and are considering more.

As a major sponsor of the Royal Thames Yacht Club's challenge for the cup, the work of BA is an interesting guide to how things are building up in Perth. At the beginning of the year the airline was flying documents back to London via a possible sponsorship.

Now it is shipping film of the British boat under construction, out to Perth TV stations. Next month, crewmen and personnel will begin to fly to their sailing destination and there is talk of flying the completed boat out by cargo jumbo at Christmas. Meanwhile, the world's most isolated capital city to fight for its return.

Prices soar to new records

AUSTRALIA has been remarkably well served by its artists and painters—so much so that the art market in Australia was described recently as being absurdly overheated.

The overheating had resulted, said one commentator, from a combination of rich men scrambling to build collections, shrewd dealers, skilful auctioneers, and some "cunning spruikers."

There was a reference to the emergence of "false values"—a muddled phrase, if ever there was one—and the suggestion that "taste" was being manipulated. It was all splendidly provincial.

On the other hand, prices for Australian works of art, particularly paintings, are certainly on the up and up—something of which Mr Robert Bleakley, managing director of Sotheby's Australia, was aware when Sotheby's launched its Australia operation in 1983.

Mr Bleakley is a specialist in African and Oceanic art, and used to run Sotheby's tribal art section in Bond Street, London.

"In 1982," he says, "we carried out three detailed market research studies, and calculated that there was about A\$26m (£13m) worth of fine art sales through existing art houses in Australia. Add in the galleries and dealers and you could probably triple that. We decided to concentrate on the upper end of the fine art market."

Sotheby's is holding eight sales this year. Sales include

Art market

MICHAEL THOMPSON-NOEL

colonial painting and books, tribal arts (African, Aboriginal and Oceanic), decorative and Oriental works, modern paintings, toys and vintage cars, and European works of art and furniture.

"Almost anybody buys," says Mr Bleakley. "The current market is very fairly young." A major buyer is Perth entrepreneur Robert Holmes & Court, said to be Australia's wealthiest individual.

Sotheby's first Australian sale was in March 1983. Prices included A\$500,000 for a three-quarter length portrait of Capt James Cook by John Webber RA, who sailed on Cook's third Pacific voyage, and survived the massacre in Hawaii, and A\$170,000 for Mount Zero and Lake Tawari, Victoria, by Nicholas Chevalier (1862).

The current auction record for an Australian painting is A\$300,000 for a Sir Arthur Streeton, though private sales of A\$15m-plus have been reported.

At present, Fred McCubbin, a sort of bush Millet whose works (*Down on His Luck*, *Bush Brawl* and *The Wallaby Track*), praised sweatiness and mateship and the struggles of the early settlers, commands the highest prices.

Among modern Australian painters, of whom there is a rich supply, the current auction record is A\$313,500 (Sotheby's this year) for Melbourne's *Burning 1947-47*, by Arthur Boyd, a price that more than doubled the previous record for a modern work, which was A\$153,000 for *The Camp* (1953) by Sir Russell Drysdale.

In 1950 Sir Russell started travelling in northern Australia, which he found magnificent in dimension, old as time—a land in which men of stone-age culture were living a forgotten pattern of life in incongruous partnership with settlers, cattle kings, miners and policemen. There was room for them all, said Drysdale: camp fires and towns, ships, Cadillac and camels, flying doctors and corroborees.

Recently, in Sydney, there was an outstanding Drysdale exhibition. "Any major Drysdale put into a sale now would fetch between A\$200,000 and A\$300,000," says Mr Bleakley. "A really major one: A\$400,000."

As for contemporary works, there is an outpouring of energy and talent. The banks, finance houses, mining companies and private individuals have bought prodigally, but still the production lines flow.

Our growth can reflect yours in Australia.

Continued success in all aspects of corporate and money market services for Australia's growing markets has seen Rothwells' rapid growth right across Australia.

Total funds employed at 31st July 1985 have risen to \$226 million from \$3.3 million in 1982. During that time operating profits have increased ten fold to \$4.4 million whilst shareholders funds have grown to \$21 million.

That growth from a solid team of people committed to a sound, open minded approach to financial services, has opened many new doors for our clients.

We've also opened some new doors for ourselves in Sydney and Perth to help us make it easier for you to secure your future right across Australia.

WEST COAST HOLDINGS LIMITED

INCREASED GOLD PRODUCTION: EXCITING EXPLORATION PROSPECTS

West Coast Holdings is a West Australian gold miner and explorer which has in the past year brought two new gold mines into production at Eureka (Bardoc) and Hawkins Find, whilst remaining debt free, and has progressed two of the company's largest and most prospective exploration targets to the drilling stage.

- ★ The Eureka mine and Grants Patch carbon-in-pulp treatment operation is currently producing gold at an estimated 5,000 ounces a year.
- ★ Hawkins Find heap leach production planned to expand to 8,000 ounces of gold annually.
- ★ Donnybrook is to be drill tested in the December quarter by BHP as part of a five-year joint venture. The 1,210 sq km area contains four identified epithermal gold zones. West Coast's interest is 50% reducing to 24.5% on BHP earning 51%.
- ★ Brockman strategic metals deposit (49%) is now being detail drilled.

A copy of the company's 1985 annual report, just published, can be obtained from City of London Public Relations Ltd., 42-45 New Broad Street, London EC2M 1QY. Tel: 01-628 5518.

Publicly-funded channel in firing line all year

Controversy engulfs ABC television

QUITE POSSIBLY, Australia produces some of the worst tabloid newspapers in the world—little sheets in which only the insensitive would wrap dead fish. Similarly, Australian commercial TV programming veers lazily between reliance on American imports, parish pump politics, and a nervous cockle-tooting of everything 'Australian'.

Twenty years ago, author Donald Home wrote that "decision-makers and intellectuals get so used to reading about Australia in over-simplified terms, and they so lack information, that their discourse becomes brutalised when they talk about Australia. There is an irascible ignorance, impatient with complexity, and a failure to understand that policy-making involves the analysis of alternatives."

Things are better now, but not much.

There are one or two up-and-coming media barons, such as Western Australia's two top tycoons, Messrs Robert Holmes & Court and Alan Bond. Yet most media power is concentrated in the hands of Mr Rupert Murdoch's News Corporation, the Sydney-based John Fairfax, Mr Kerry Packer's Consolidated Press Holdings (now a private company), and the Melbourne-based Herald and Weekly Times group.

In the view of Keith Windschuttle, author of *The Media* (Penguin Books, 1984, A\$12.95): "The Australian media are among the staunchest of this country's defenders of private enterprise and the 'free market'. Yet the great virtues that are claimed for this system—the sovereignty of the consumer, the efficiencies of competition, the market open to talented new entrants—are nowhere more lacking than in the structure of the media business itself. . . . In terms of markets, the concentration long ago produced nearly pure monopoly."

A controversy of a far more substantial nature is the one that has engulfed the Australian Broadcasting Corporation (ABC) which is funded publicly and has been in the firing line all year.

The ABC is a faded imitation of the BBC, some of whose programmes it carries, but on August 12 the fat truly hit the fan when some of Australia's leading writers (including Patrick White and Thomas

Keneally), artists, judges and other prominent figures signed an open letter in which they accused the ABC of a "clownish quest for popular 'relevance'" and called on the Government to institute an inquiry.

According to the letter: "The corporation is now neither a great transmitter of culture nor an efficient commercial broadcaster. It has fallen between two stools. In doing so, it has lost its authority and integrity, and with them that respect and affection among all sections of the Australian public which was once a real thing."

"The question has to be asked whether Australians are prepared to watch a greatly reduced institution destroyed by mediocrity. If we do, we will stand condemned as a society which wants nothing but trivia and in which high culture has ceased to matter."

On August 26, Mr Geoffrey Whitehead, the ABC's managing director, said the corporation was not "drifting", but attempting to sort out its problems.

The ABC's current annual budget is nearly A\$400m (£200m), though the staff has claimed that the Government should consider giving the ABC another A\$20m to fund work on satellite transmissions. The suggestion was brusquely rejected by the federal Treasurer, Mr Paul Keating, who is never averse to putting the boot in.

Asked about the staff claim, Mr Keating said: "They won't get another sack out of us." He also drew attention to the manner in which ABC journalists have recently used much of their own airtime to focus on ABC organisational and financial matters — "boring everybody stiff," said the Treasurer, "with their problems."

The ABC has one consolation: its affairs could hardly reach a lower ebb.

The media

New pleas for improvements

Aboriginal rights

MICHAEL THOMPSON-NOEL

THE DESCENT and dispossession of Australia's original inhabitants, the Aborigines, can be traced, graphically, in the earliest writings, drawings, and paintings from Terra Australis once the white virus—the First Fleet, which anchored in Port Jackson (Sydney Harbour) in January 1788—had come ashore in the guise of more than 700 convicts, guarded by 200 marines and officers.

The earliest tradition, says art critic Robert Hughes, was to fit the Aborigines into an Hellenic scheme, giving them the classical physique and posture of bearded Greeks adorned with war paint.

Yet when the colonists had lived close to the Aborigines for some time, it appeared that the locals were not as noble as previously taught. "They suffered from weakness and ignorance," they were frizzy-haired, spindly, dirty, intractable, thievish, and black... the destruction of the Australian Aborigines had begun.

In the 1930s and '40s, says Professor Geoffrey Blainey, a revolution in attitudes to Aborigines occurred. Respect for their cause had risen markedly, though the respect was highest in the temperate south, where Aborigines were rarely seen.

Land rights were granted, so that by 1961 one-tenth of the land in Australia was owned or reserved for Aborigines, who formed only 1.2 per cent of the population, making their share of the land relatively high. Most of this land was poor in soils and grasses, though not necessarily in mineral potential.

However, says the professor, the revolution in attitudes to Aborigines was still only half a turn of the wheel. In housing, health, education, and many other facets of social well-being they are relatively deprived. The deprivation, however, is no longer accepted as right or inevitable by most white people, although a minority of white people do wish for the old days of black subservience.

In three years' time, white Australia will observe its bicentenary. There will be much to celebrate, for in 200 years the former colony has shaken off its debauched

Australia's bicentenary is only three years away, but the Aborigines may have little to celebrate. Experts warn they could "die out quite rapidly," unless lifestyles are improved.

beginnings and marched to nationhood. There have been years of boom, and bust, and boom again.

For the Aborigines, there may be little that they wish to celebrate. Last month (August), Professor Fred Hollows, professor of ophthalmology at the University of New South Wales and director of the national trachoma programme, told a Melbourne conference that the Aborigines "are destined to die out quite rapidly" unless there were major improvements in their lifestyles, hygiene, and public health.

Death rate

Describing the results of a recent review of Aboriginal health, the professor said that life expectancy for Aborigines was decreasing and the death rate among young adults rising.

Figures from NSW show (life) expectancies for Aboriginal males similar to those of whites in 1890 and for Aboriginal females similar to white Australian women in 1910. It appears the major change has been one of reducing infant deaths but not reducing the infant attack rates of infectious illness. The factors that generate Aboriginal ill health appear to be more effective than ever, and less infective and degenerative factors are gaining in strength.

Illnesses causing serious problems among Aborigines include hepatitis, leprosy, rheumatic

fever, chronic respiratory infections, middle ear infection, syphilis, gonorrhoea, and trachoma (a highly-contagious disease of the eye).

A note of menace—very definite menace—was detectable in last month's statement by the Minister for Aboriginal Affairs, Mr Clyde Holding, detailing the federal budget allocation for his department for 1985-86 of A\$290.7m (£146m), up 4 per cent on last year.

In addition, other departments and authorities provide special assistance to Aborigines. Their appropriations for 1985-86 total a further A\$208.1m.

Commonwealth (federal) programmes, said Mr Holding, would continue to concentrate on those Aborigines facing the greatest threat to life and security. "Town camps and isolated communities will be the primary targets of our programmes. Water supplies and housing will receive the highest priority," he adds.

Funds had been allocated to alleviate the major health problems of trachoma and volatile substance abuse, particularly petrol sniffing in remote Aboriginal communities.

Until recently there was great emphasis on providing more land for Aborigines, some of whom wish to revert to the traditional, nomadic lifestyles of their forebears, the first of whom arrived at least 50,000 years ago.

"On the eve of the coming of the British," says Professor Blainey, "Aboriginal Australia was divided into several hundred republics, each with its own language or distinctive dialect, each with its patriotism and customs and traditions, and each making so little imprint on the territory it occupied that, to newcomers from Europe, the Aborigines did not even seem to be occupying it. In fact, they occupied it, depended on it, exploited and harvested it, loved it, and even worshipped it, but in a way we are only now beginning to appreciate."

The mining industry is adamant that extended land rights is not the way to reconcile the ideal of Aboriginal control over land with the important contribution (A\$11bn in exports) mining makes to Australia.

Mr James Strong, executive director of the Australian Mining Council, said in May that "by any test, the impact of the present rules governing exploration and mining on Aboriginal land has been extremely detrimental."

He spoke of the "paralysis" of exploration and mining in the Northern Territory, where exploration spending fell from A\$32m in 1981-82 to A\$25.6m in 1982-83 to A\$11.8m in 1983-84. This was not wholly the result of slumping market prices. The national average decline in spending on mineral exploration was less than 30 per cent, compared with the Territory's fall of more than 60 per cent.

In Western Australia, the state Labor Government tried earlier this year to introduce moderate land rights legislation that had broad community support, including that of the mining industry.

Premier Brian Burke's Bill recognised long-term Aboriginal reliance on land. But there would have been no Aboriginal veto of mining and exploration. Sacred sites and living

areas would have been protected, but access to land for mineral exploration and production would have been maintained.

Mr Burke was anxious to remove "currently existing oppressive elements of paternalism which are akin to a system of apartheid." But his bill was scuttled in the state Legislative Council.

Mr Bill Hassell, the Opposition leader in WA, claimed the state had been protected from "extremist legislation."

Whether the Hawke Government in Canberra makes any progress towards uniform federal land rights legislation remains to be seen. Mr Hassell, for one, has said that Prime Minister Bob Hawke "knows that if he tries to impose national uniform land rights legislation on this nation he will simply hasten the certainty and immediacy of his political demise."

In any case, there is a growing tendency not to see land rights as the primary possible solution to Aboriginal problems. "Aboriginals in Australia," says Ms Pat O'Shane, secretary of the NSW Department of Aboriginal Affairs, "suffer similar social and economic conditions to those in the Third World"—something that land rights will not automatically change.

As white Australia approaches its bicentenary, the outlook for the Aborigines is not good at all. Yet there is more than one possibility. In the view of author and poet Judith Wright, the Aborigines "have never agreed to tolerate us, our bargained with us over land. In their view, they own the continent, and the land will look after them beyond our times. After all, they have survived all the changes of the Pleistocene, and their way of life, it seems, has persisted perhaps with little change since their Dreaming was laid down. There is little we can say to that."

SWAN RESOURCES LIMITED ADVISES THE FORMATION OF AUSTRALIAN CHINA CLAYS LIMITED

Australian mining and exploration company, Swan Resources Limited, has announced the formation of a new public company, Australian China Clays Limited, to develop a major new clay refinery in New South Wales.

The wet processing plant, the second only in Australia, will treat the large reserves of clays delineated by recent exploration on the company's mining leases at Gulgong, some 250 kilometres north-west of Sydney.

Swan Resources has been producing high quality clays for the Australian tableware and sanitaryware markets since it acquired the Gulgong clay deposits for its industrial minerals division in 1982. The strong, plastic ball clays, for which the area is renowned, have to date been selectively mined and processed by dry-milling.

The new plant will enable the company to acquire a significant share of the growing market within Australia and countries of the Western Pacific Rim by producing a wide range of pure and graded clays which will find application in the paint, rubber, plastic and oil refining industries. Additionally, the particular physical qualities of newly discovered primary clays render them highly suitable for the manufacture of porcelain.

Clay reserves already established are sufficient to supply these markets well into the next century.

Swan Resources Limited will be a major shareholder in Australian China Clays Limited, and Swan Resources' shareholders will have first entitlement to subscribe for shares in the fully under-written issue. Australian China Clays Limited shares will be listed on the Australian associated stock exchanges.

The formation of Australian China Clays Limited is the first in a series of developments planned by Swan Resources Limited to strengthen its existing industrial minerals base and foster growth into advanced technology applications.

CITY PROFILE: CANBERRA

National capital still in the making

THEY had a fun time choosing a name for the Australian federal capital, sifting—and rejecting—more than 700 proposals. Among those rejected were New London, Empire City, Shakespeare, Canberra, Federate, Pacifica, Eucalypta, Kangaroo, Wheatwold, and one that comprised the first syllables of each of the state capitals: Sydmeledepberisho.

Finally they picked Canberra, thought to have been an Aboriginal word, though there were differences of opinion over how to pronounce it, or even what it meant. It might have meant "women's breasts" after two rounded hills, Black Mountain and Mt Ainslie, or it might have signified "meeting place."

Unfortunately, at Canberra's opening ceremony, in 1913, there were no local Aborigines who could be consulted for a ruling—an absence deemed significant by attorney-general William Morris Hughes, who spoke at the official luncheon.

"We are engaged," said Hughes, "in the first historic event in the history of the Commonwealth (of Australia) today, without the slightest trace of that race we have banished from the face of the earth. We must not be too proud lest we should, too, in time disappear. We must take steps to safeguard that foothold we now have."

His words have been heeded, for Canberra today must rank as one of the world's most beautiful, best-planned capitals, an elegantly-landscaped city that in the view of author Bruce Grant is more habitable than Brasilia, more coherent than New Delhi, less formal than Washington.

Civil service

It used to be called "Bush Capital." That is no longer the case, though there is a marked ambivalence in the breast of many Australians when contemplating their national capital, which many still regard as Bureaucratic City: the haven of grasping civil servants who live high on the hog at the nation's expense and are famously out of touch with the affairs of the people. (Civil servants are not all bladders, though in Canberra as elsewhere they prosper greatly.)

In Katoomba, the gold-mining boom town in Western Australia, I was told recently that Canberra was chock-a-block with third-generation civil servants. (He had never been to Canberra.)

The subject that had triggered his wrath was the then-

current suggestion that the Hawke Government in Canberra was contemplating the introduction of a tax on gold production. "Why should the bureaucrats get more and more when the people in the hush have nothing?" he asked—a line of interrogation still freely encountered anywhere outside Canberra.

In truth, the place is no longer exclusively Bureaucratic, though the bureaucrats do stage a wretched little traffic rush at 5 o'clock which visitors in hire cars should certainly avoid, for Canberra's road system takes some getting used to.

These days, says Mr Gordon Scholes, Australia's Minister for Territories, Canberra is growing at a rate more than double the national figure, the current work distribution being 57 per cent public employment and 43 per cent private. The Government aim is 50:50, an ambition that is being realised, for in 1984-85 the level of private-sector employment rose by 13 per cent, against 5.3 per cent in the public sector.

At 47 per cent, Canberra's unemployment is the lowest in Australia. The capital has attracted more than 250 technology-based firms that employ over 3,000 people, in addition to which civilian employs about 4,000 in the Australian Capital Territory, generating about A\$230m (£115m) annually.

Big attraction

At present, the star attraction for visitors is the new Parliament House, a A\$500m-plus building due to be opened in 1988. Australia's bicentenary, and likely to rival the Sydney Opera House as Australia's most famous building.

Other developments are in train, including the A\$150m National Convention Centre which will incorporate a plush hotel and a 2,500-seat convention centre (good hotels, as opposed to excellent motels, are few on the ground in Canberra); a Museum of Australia (possibly), and so on.

Canberra is by no means perfect," says Bruce Grant. "Within the plan some uncomfortable assertions have been made. The lakeside buildings (Treasury, Foreign Affairs, Library, High Court, Gallery, Defence) might each have been built with some other capital in mind."

But he adds: "Even they now contribute, however, to the charm of Canberra—the gross mistake, pettiness and human follies that give any city its personality. As

Canberra gets older... the comprehension of the great Griffin design becomes more evident. It has left room for Canberra to grow into a great national capital."

The design is that of Walter Burley Griffin, an American architect who won first prize in a competition to design the federal capital. Griffin was a vegetarian and a theosophist who had worked closely with Frank Lloyd Wright.

Canberra did not progress as speedily or as elegantly as Griffin might have liked. Oskar Spate, a keen student of Australian landscape, described Canberra in the 1960s as "seven suburbs in search of a city," or "a good sheep-station spoiled."

By the mid-1970s, however, when Canberra's population passed 200,000, the Fraser Government was allowing monumental projects to proceed, so that Canberra in the view of historian K. S. Inglis, has become the best place to see new Australian architecture.

On the southern shore of Lake Burley Griffin are the excellent buildings of the High Court and Australian National Gallery, with the new Parliament House rising in the background on Capital Hill: a building that burrows into its circular site.

Some, says Inglis, criticise the building as a monument to executive power, a capitulation of parliament to government. Others wonder what will happen to the present Parliament House, a marvellous old building that is worth preserving somehow, even if it does block the grand view along the axis from Capital Hill to Mt Ainslie.

"What would Walter Griffin think of Canberra?" asks Inglis in his essay *Ceremonies in a Capital Landscape in Australia: The Daedalus Symposium* (Angus & Robertson, A\$6.95).

"It makes invoke his blessing with more or less justification," he says. "Griffin, his successors, and their clients the politicians have given Australia a capital city that delights many a foreigner—and should please Australians, when they come to see what they are paying for. They make laconic jokes about the curves they get lost in, the politicians they watch from the public galleries, Jackson Pollock's Blue Poles (in the National Gallery), and other costly objects in the landscape... There should be a fine crowd when the flag goes up over Capital Hill."

Apple charges denied by former chairman

BY LOUISE KENNE IN SAN FRANCISCO

MR STEVE JOBS, co-founder and former chairman of Apple Computer, yesterday denied charges that he attempted to "steal" proprietary information and key employees from the company.

Responding to a suit filed against him by Apple Computer, Mr Jobs said that he had "no intention of taking or using any Apple confidential information or proprietary technology to his new company."

Apple Computer is charging that its former chairman misappropriated confidential information, hired away key Apple employees, violated his employment contract and breached his fiduciary responsibilities as chairman of the company.

The suit follows Mr Jobs' resignation last week and his announcement of plans to form another computer company. Mr Jobs hired five

Apple employees to join him in the venture.

Apple's suit claims that Mr Jobs' new company will compete with Apple and calls Mr Jobs' conduct "wanton, wilful, malicious and outrageous."

"This sort of thing sure as hell doesn't help Apple or its employees. We don't want to get involved in an unjustified lawsuit. We just want to build our company and invent something new," Mr Jobs said.

Mr Jobs has so far declined to provide details of his planned venture. He is, however, understood to be planning the development of a high-performance personal computer for university and college users.

Apple Computer has undertaken a major marketing effort to sell its Macintosh computer to U.S. universities.

The Apple lawsuit also names Mr Richard A. Page, who formerly held the title of "Apple Fellow." He is one of five senior Apple employees hired by Mr Jobs for the new company. Mr Page was responsible for designing Apple's next generation personal computer.

Apple alleged that Mr Jobs "secretly made plans for the new company while serving as Apple's chairman, that he falsely represented his company and intentions to the board of Apple computer, and that his company planned to compete with Apple."

Apple is seeking unspecified monetary damages as well as prohibiting Mr Jobs from using any of Apple's confidential information and from inducing other Apple employees to join him in his venture.

Bull and Jeumont Schneider sign accord

By David Marsh in Paris

JEUMONT-SCHNEIDER, the private-sector French telecommunications group, is linking up with the nationalised computer concern Bull to form a joint research company for production of business communications systems.

The company will be owned 51 per cent by Jeumont-Schneider. The move represents the latest step between groups in the computer and telecommunications fields towards marrying technologies from the two sectors.

Bull in the past has been cautious about formal alliances with telecommunications companies. However, it has already signed a number of agreements including with Jeumont-Schneider and with the Telic-Alcatel group - to make its computers compatible with private branch telephone exchanges (PBXs).

The research company will aim to come up with common specifications for a new line of office automation products allowing sophisticated flows of data via telephone terminals. Jeumont-Schneider, part of the Emap-Schneider conglomerate, has a range of activities in electronics, electrical engineering and transport. It has a stake of about 35 per cent in the French markets for PBXs, compared with 40 per cent for the Alcatel-Thomson group.

Bull has already linked up with Jeumont-Schneider in the mainstream computer field. Under an agreement earlier this year the group's Jistral subsidiary is helping to distribute Bull's new Micro 30 micro-computer, which is being offered as a work station in data processing networks.

Meta, the diversified Montedison subsidiary which controls the Standard retail chain as well as 23.1 per cent of the Rizzoli publishing group and the Tecmont engineering business, said it achieved first-half revenues of L1,088m.

Meta, the Montedison vehicle used in the recent takeover of the B-Invest financial and property group, last year made a L39.8m net profit on turnover of L2,321m.

Pechiney beats low aluminium market prices

By Paul Bettis in Paris

PECHINEY, the nationalised French aluminium group, yesterday reported higher first-half earnings of FFr 451m (\$54m) compared with FFr 307m in the comparable period last year, despite a more unfavourable international environment for aluminium.

Sales rose to FFr 19,23m in the first half from FFr 18,25m the year before. However, cash flow declined to FFr 1,55m in the first six months from FFr 1.8m the year before.

With the exception of its copper fabrication operations, all the group's divisions were profitable in the first half. Copper fabrication, which accounts for 9 per cent of the total group sales, is currently undergoing restructuring in an effort to cut losses.

Pechiney said yesterday that, despite the fall in prices, its aluminium division, which accounts for 53 per cent of sales, was operating profitably in the first half, although earnings were lower than the year before.

The group expects to continue operating profitably in the second half and said earnings for the full year would be higher than in 1984, when the group reported a surplus of FFr 540m after a loss of FFr 463m the year before.

BHF Bank hints at higher dividend

By Jonathan Carr in Frankfurt

BERLINER Handels- und Frankfurter Bank (BHF), the West German merchant and commercial bank, has sharply raised profits so far this year - thanks not least to much stronger earnings from own-account trading in securities and foreign exchange.

The bank hinted that, as a result, the dividend might be raised above the payout of DM 10.50 a share made for the 1984 year. Other German banks are expected to make similarly buoyant profits and dividend statements shortly.

BHF Bank said that in the first eight months this year partial operating profit (excluding own-account trading) rose by 10 per cent to DM 90.3m (\$33m). It noted that the interest margin (the difference between interest paid and earned) had recovered since the start of the year and was now again over 2 per cent.

The rate of increase in full operating profit was greater than that of the partial profit figure, the bank said, without giving details. BHF Bank said it would make some risk provision in its 1985 results - for credit to South Africa (which totals DM 45m in the BHF group) but that this did not alter its confident profit expectation.

EUROBONDS

Weak dollar galvanises Australian sector

BY MAGGIE URRY IN LONDON

WHILE the Eurodollar bond market was weakening further yesterday, the Australian dollar sector was alive with new issues. The declining dollar exchange rate is continuing to divert investors' interest to non-U.S. dollar issues.

Only one fixed-rate dollar issue was launched, a \$100m six-year deal for CEPME, the French-guaranteed small business finance body. That suffered in the market's fall and dealers said the terms, at a 10 1/2 per cent coupon and per issue price, were tight. The bonds traded 1/4 point outside the 1 1/2 per cent fees at one time. Lead manager is Citicorp.

The BECS issue, the repackaged tranche of the UK floater, slipped back to trade at around a 1.20 discount to the 10 1/2 issue price while the floater itself rose above 90.90 at its high, closing just under that level.

Mitsubishi Finance led a \$150m floater for Banca Nazionale dell'Agricoltura with a seven-year maturity paying 1 1/8 per cent over six-month London interbank offered rates (Libor). Fees total 18 basis points, and the bonds were trading within that discount bid at 90.85. Traders regarded the terms as fine.

Four issues were launched de-nominated in Australian dollars, and syndicate managers expect the flood to continue this week. Borrowers can swap the proceeds into floating rate U.S. dollars at rates well below Libor. There could soon be too much paper around for the selective demand to pick up, and one banker was warning of a "bloodbath" by the end of the week.

Investors in this sector are mostly German-based and prefer names they know well. Bayerische Vereinsbank's deal got off to a good start trading well inside its 1 1/4 per cent selling concession. This is a \$550m five-year issue paying a 13 per cent coupon and priced at 100 1/2.

A two-tranche deal totalling \$550m was launched for Amey, the Dutch insurance company, by Pier-son Holding and Piersen. This has a 13 1/4 per cent coupon and par issue price on the four- and five-year tranches. Fees are 1 1/4 per cent on the shorter and 2 per cent on the longer.

BNP Bank bond average			
Sept 24	1985	Previous	
105.346		105.314	Low
High		Low	105.417

longer. Dealers were more sceptical about this issue's chance of attracting investors.

Late in the day, issues for Norddeutsche Landesbank and Landesbank Schleswig-Holstein appeared. The former, led by Orion Royal Bank, is for \$550m with a seven-year life and a 13 1/4 per cent coupon at 100 1/2. The latter has a five-year maturity with a 13 per cent coupon and 100 1/2 issue price.

The expected issue for the World Bank was launched in the Ben market by Credit Suisse First Boston. It is the largest deal yet seen in the sector at Ecu 250m and comes with an Ecu 100m tap. The 10-year non-callable bonds pay an 8 1/2 per cent coupon and are priced at 99 1/2.

The sector has had a boost from the weak dollar, and the paper was moving within the 1 1/4 per cent fees, despite some retail investors' declared preference for higher yields.

McDonald's U.S. hamburger group, launched a yen dual currency issue which may have been fixed before the weekend meeting of finance ministers. The weak dollar does not help dual currency deals. This, for Y200m, will be repaid at an exchange rate of Y200 to the dollar in 1995. Meanwhile the coupon is 8

per cent, higher than investors can get on yen issues, but issue price is 101 1/2. Daiwa Europe is lead manager.

China International Trust and Investment Corporation (CITIC) launched its first, and China's second, D-Mark deal yesterday. The DM 150m issue, led by Deutsche Bank, has a six-year life and pays a 8 1/2 per cent coupon. Issued at 99 1/2, the bonds were trading around the 1 1/4 per cent selling concession.

Korea Exchange Bank launched a DM 100m five-year deal with a 7 1/2 per cent coupon and par issue price, led by Commerzbank. This was trading around 98 1/2 compared with the 2 per cent fees.

Secondary market prices were steady in the D-Mark sector yesterday with turnover at a low level. The declining dollar has had little effect so far on the Swiss franc foreign bond market.

Credit Suisse launched a SwFr 150m public issue for Pacific Gas and Electric, thought to be attached to a swap. This has a 10-year life, and terms were fixed at a 5 1/2 per cent coupon and par issue price. Dealers felt the conditions were acceptable after recent 15-year deals paying 5 1/2 per cent.

Orion Royal launches UK equity brokerage

BY DAVID LASCELLES IN LONDON

ORION Royal Bank, the London merchant banking subsidiary of the Royal Bank of Canada, is launching an equity brokerage venture to serve the international investment market.

Orion Royal Bank Equities of Canada will operate as a broker and adviser on Canadian equities to institutional investors outside Canada. It will also distribute new Canadian equities on the international market.

The venture is believed to be the first of its kind by one of the Canadian banks, which are not allowed to engage in full-scale brokerage on their home market. However, because of Canadian banking regulations, it will be able to deal only with non-residents.

The company is being set up by three brokers from the London office of Richardson Greenshields, a

Canadian broking firm. Mr Maynard Marceau, president, said he and his two colleagues wanted to establish their own equity business. They approached Orion Royal because its chairman, Mr John Abell, was formerly in the London office of Wood Gundy, the large Canadian broker.

Mr Marceau believed that the international equity market would be a major growth area. He cited recent equity issues by leading Canadian companies such as Bell Canada, Alcan and Toronto Dominion Bank which had "international tranches" for distribution abroad.

The operation would also provide valuable experience for the Royal Bank, Canada's largest, in anticipation of the day when domestic regulations are likely to be eased to permit banks to enter the broking business in Canada.

Toronto and Amex open electronic link

BY BERNARD SIMON IN TORONTO

THE Toronto and American stock exchanges have inaugurated the first cross-border electronic trading link between two major equity markets.

During a colourful and noisy ceremony on the floor of the Toronto exchange yesterday, officials of the two exchanges demonstrated the new system by executing a two-way trade in 1,000 shares of the Calgary-based company Husky Oil. The link is initially confined to trading in six companies listed on both exchanges - Echo Bay Mines, Assamora, Canadian Marconi, Gulf Canada, Husky Oil and Imperial Oil.

A total of 36 companies is listed on both the TSE and the Amex, and the trading link is expected to be extended later.

The link provides a direct flow of orders between the two markets, allowing trades to be completed at the most competitive price. Trades can be executed in either U.S. or Canadian dollars.

Both the Amex and the TSE see the electronic link as an important step in maintaining their competitiveness with the New York Stock Exchange and with the expanding international electronic trading networks.

The main advantage for Toronto is increased liquidity, while the Amex hopes the link will encourage a larger number of Canadian listings.

U.S. exchanges, notably the NYSE, currently account for a substantial proportion of trading volumes in shares of Canadian companies. The TSE plans a similar tie-up with the Mid-West Stock Exchange in Chicago.

Montedison fibres unit set for healthy profit this year

BY ALAN FRIEDMAN IN MILAN

MONTEDISON, Italy's largest producer of man-made fibres and a subsidiary of the Montedison group, said it expected to make a "considerably positive" net profit this year, having emerged last year from a decade of losses.

The Milan-based company, which has undergone radical restructuring in recent years, recorded a 10 per cent rise in revenues during the first half of this year, to L531bn (\$290m).

First-half earnings were not disclosed, but Montedison said it was in the black.

Last year, Montedison achieved a L10bn net profit on sales of L865bn. This followed a lengthy rationalisation which saw the number of em-

ployees drop from 27,000 in 1977 to around 5,000 at present.

The company, which is planning to seek a listing on the Milan bourse in the next year, has in recent years closed four of its eight plants and has pulled out of the production of nylon, concentrating instead on acrylic and polyester filaments and staples.

Some 61 per cent of Montedison turnover in the first half of the year came from outside Italy. This compares with 55 per cent in the equivalent period of 1984. Investments in the first half of 1985 were doubled year on year to L22m.

Meanwhile, a Montedison spokesman yesterday declined to confirm or deny that the Italian

chemicals group was in talks with the state-owned Enimichem regarding the sale of several major chemical plants. It is believed, however, that such a deal is under discussion and could be related to plans for a new international venture which Montedison is considering in the chemicals sector.

Meta, the diversified Montedison subsidiary which controls the Standard retail chain as well as 23.1 per cent of the Rizzoli publishing group and the Tecmont engineering business, said it achieved first-half revenues of L1,088m.

Meta, the Montedison vehicle used in the recent takeover of the B-Invest financial and property group, last year made a L39.8m net profit on turnover of L2,321m.

Minorco has heavy cut in year's result

By Kenneth Marston in London

SHARPLY reduced earnings for the year to June 30 have been announced by Minerals and Resources Corporation (Minorco), the big Bermuda-registered international investment arm of South Africa's Anglo-American De Beers group. The dividend total, however, is maintained at 22 cents with a final of 10 cents.

Announcing its interim results, Minorco forecast a "substantial" reduction in net earnings for the full year. Subsequently it announced a \$402m sale of 10m shares in Phibro-Salomon which, it was stated, would result in the year's net earnings ending broadly in line with those of 1983-84.

In the event, however, the past year's net earnings after extraordinary items have dropped to \$104.6m, or 61 cents a share.

The reason is a \$154m write-down of the investment in the Inspiration Resources mining arm plus Minorco's share of the extraordinary losses of companies in which Inspiration Resources has interests.

These debits have outweighed the gain of \$235m realised on the Phibro-Salomon sale to leave a net extraordinary loss for the past year of \$5.4m. It compares with an extraordinary gain in the previous financial year of \$67.7m.

The past year's earnings before extraordinary items amount to \$110.1m against \$129.5m.

Alcan Aluminium has stopped all preliminary work on its CS1bn (U.S.\$735m) Laterrière aluminium smelter north of Quebec city because of prevailing low prices for primary metals.

Beatrice sees earnings tumble as expected

By Terry Byland in New York

EARNINGS continued to fall in the second quarter at Beatrice Companies, the U.S. food group which replaced its chairman last month as it struggled with an expensive shift in marketing and managerial strategies.

There was also a sharp downward move in sales trends. Sales slipped from \$3.2bn to \$3.1bn in the second quarter after rising by 39 per cent in the first three months.

Special factors affected the comparative profit totals, but the result is in line with expectations. Net earnings dipped by 31 per cent to \$70m, or 66 cents a share, although last year's total included \$40m from special factors.

At six months, Beatrice has

earned \$126m, or \$1.25, against \$173m, or \$1.82, on sales 13 per cent ahead at \$6.2bn. For the whole fiscal year to February 1985, Beatrice turned in net earnings of \$479m, or \$5.06 a share. The new chairman, Mr William Grainger, has already said he expects little earnings improvement before the next fiscal year, ending February 1987.

● Pillsbury, the fast-food and restaurants group, pushed net earnings ahead from \$36.9m, or 90 cents a share, to \$42.7m, or 96 cents, in the first quarter, on sales of \$1.25bn against \$1.02bn.

The results from newly-acquired Diversifoods had little effect at net level.

Litton warns on effect of oil market softness

BY ANDREW BAXTER IN LONDON

SHARES of Litton Industries, the California-based technology group, fell 9 1/4% to 57 1/2 by lunchtime yesterday after a forecast that earnings per share could be "flat to slightly higher" than in the year ended July.

Mr Orion Hoch, president and chief operating officer, told analysts in London yesterday that "current uncertainties in the petroleum market are more serious than had been anticipated. We expect that sales for our resource exploration group may be considerably affected this year although it will continue to maintain its good margins of profitability."

Litton, which has transformed itself from a traditional industrial conglomerate into an electronics, defence equipment and geophysical services group, recently reported net earnings for the year just ended of \$299.5m, or \$7.21 a share, on sales of \$4.59bn.

Mr Hoch said that, despite the current softness in the oil industry, Litton's programme of acquisitions and technological investments in the geophysical analysis and services business over the past two years had broadened and strengthened the company's capability for the longer term.

S-E Banken expects downturn

BY KEVIN DONE IN STOCKHOLM

SKANDINAVISKA Enskilda Banken, Sweden's leading commercial bank, held operating profits unchanged in the first eight months of the year.

The bank warned yesterday that profits for the full year would be lower than in 1984, however, unless the Riksbank, the Swedish central bank, eased its tough monetary policy.

Swedish interest rates were pushed close to record levels in May as the central bank tried to smooth over a crisis of confidence in the Swedish krona. Despite some easing in July, the persistently high interest rates, among the highest in Europe, meant a reduction in profits of close to SKr 30m (\$3.7m) a month compared with the early months of the year, S-E Banken said yesterday.

"With unchanged interest rates the S-E Banken group's operating profit in 1985 will be lower than in 1984, despite a continued good development in the subsidiaries," the bank said in its eight-month interim report.

The bank's Swedish subsidiaries increased their earnings by 20 per cent in the first eight months of the year while the foreign subsidiaries more than doubled their profits.

Overall, however, the S-E Banken group reported unchanged operating results of SKr 1,414m. The operating profit of the parent bank dropped by 14 per cent to SKr 1,019m from SKr 1,187m a year earlier.

Interest costs have increased far more quickly than interest earnings. The Riksbank's so-called penalty rate, the official interest rate

that strongly influences the money market, was 2.39 percentage points higher in the first eight months of 1985 than in the same period last year.

Increases in the penalty rate would have brought interest earnings down by some SKr 500m, but this was kept at over SKr 300m through a modest 6 per cent increase in the volume of lending as well as other measures.

The big drop in interest earnings was further mitigated by reduced loan losses and less need to make provisions for foreign credit risks.

As part of the co-operation within Scandinavian Banking Partners, Bergen Bank of Norway has taken a 20 per cent holding in Deutsche Skandinavische Bank, S-E Banken's West Germany subsidiary in Frankfurt.

Toyota Motor lifts group net earnings by 37.7%

BY YOKO SHIBATA IN TOKYO

TOYOTA MOTOR has reported a jump of 37.7 per cent in group net profits to ¥405.8bn (\$1.75bn) for the year to June, supported by unexpectedly strong sales in the U.S. and China and the year's steep depreciation against the dollar. Group net profits were 1.22 times more than those of the parent company, and Toyota is now Japan's largest company in terms of profits.

Group pre-tax profits advanced by 39.3 per cent to ¥831.6bn, on sales of ¥6,770.3bn, up 14.6 per cent. Parent company sales were ¥6,064.4bn. Group net profits per share were ¥159.82, compared with ¥121.91.

The figures cover 16 subsidiaries out of a total of 119. Five of the 16 are in Japan, five are overseas and six are offshoots of overseas subsidiaries. Nine affiliated companies are covered under the equity accounting method.

None of the subsidiaries or affiliates reported deficits for the year. Consolidated pre-tax profits were ¥1,533bn more than those achieved by the parent company. About 80 per cent of the difference came from Toyota Motor Sales U.S.

The group sold 3,572,143 vehicles in 1984-85, up 6.0 per cent, with passenger car sales of 2.5m units, (up 2.0 per cent),

and truck and bus sales of 1m units (up 17 per cent). Domestic car sales dropped by 1.4 per cent to 1.8m units but overseas sales were up 13.2 per cent to 1.5m units, thanks to increased sales in the U.S. and China.

Prices were increased in the U.S. as Japan's voluntary export restraints caused a shortage of Japanese cars there, and this helped push up Toyota's profits.

For the current year to June 1986, Toyota expects pre-tax profits to level off if the dollar continues at the current rate of around ¥230. The company estimates sales for the year of ¥7,000bn.

Paribas will not close file on Riccar

By Jurek Martin in Tokyo

BANQUE Paribas said yesterday it was not prepared at this stage to write off the losses it incurred as a result of the bankruptcy last year of Riccar, the Japanese sewing machine company.

M Denis Antoine, of the French bank's Tokyo office, insisted that locally published reports that Paribas was about to file a legal complaint in a Japanese court against Riccar, Riccar's lead bank, were inaccurate.

But, he added "we simply cannot close the file" on the Riccar case; "we cannot treat it as an ordinary bankruptcy" and "we cannot completely disregard legal action."

Riccar went bankrupt in July of 1984 with liabilities exceeding ¥1,000bn (\$432m). Subsequent allegations of fraudulent bookkeeping at the company have been followed by lawsuits against its former management by its court-appointed trustees and by the Ministry of Finance.

Paribas' exposure was ¥1.5bn — "not spectacular," according to M Antoine. But he noted that other foreign banks had also made loans to Riccar and that this appeared to be the first time that "a fraud of this magnitude" had involved foreign banks.

Last month, the Riccar receiver stepped down and has not as yet been replaced. M Antoine said that much more information need to be made public about Riccar's affairs, including he said, the real nature of the relationship between representatives of Riccar and Paribas.

HK to tighten disclosure rules

HONG KONG — Hong Kong's Standing Committee on Company Law Reform has recommended tough share disclosure requirements on public companies.

The Committee is "strongly inclined" towards legislation that would require disclosure of beneficial ownership of shares and of major share transactions. Almost alone among major financial centres, Hong Kong now has no such requirements.

Valued and cross ownership of companies has been blamed for several recent financial

scandals and corporate failures in Hong Kong, including the collapse of Overseas Trust Bank and the troubles of many deposit-taking companies.

The proposals outlined by the Committee suggested that directors of public companies be required to disclose their interests in shares or debentures of their companies, or in the parent, subsidiary or associate companies of those concerns. That obligation should also extend to a director's family, the Committee said.

It recommended that major shareholders be required to dis-

close similar information, and that group interests acting as "concert parties" to share disclosures. The definition of a major shareholder has not been decided.

Hong Kong's Financial Secretary should have authority to investigate "suspected breaches" of disclosure requirements, the Committee said. Hong Kong's Commission of Deposit-Taking Companies has revoked the registration of Renown Credit at its own request.

China venture for Galactic Resources

By Kenneth Marston, Mining Editor

GALACTIC RESOURCES of Canada has signed a letter of intent for an equal equity joint venture agreement with Xinjiang Non-ferrous Metals Corporation of China to develop polymetallic and gold prospects in the Xinjiang Uygur Autonomous Region of western China.

The region is highly mineralised with a long history of precious metal mining and borders mining areas in the Soviet Union. Geological characteristics are understood to be similar to those in Nevada.

News Corporation profits show marginal increase

SYDNEY — News Corporation, the Australian holding company for Mr Rupert Murdoch's international media empire, has reported a 0.2 per cent increase in profit for the year ended June 30.

The company made a consolidated after-tax profit of A\$96.1m (US\$68m) for the year, up from A\$95.9m in 1983-84. The final dividend is 5 cents a share, bringing the annual total to 9 cents a share compared with 13 cents a share the year before, or 6.5 cents a share adjusting for a one-for-one scrip issue.

Group turnover, excluding revenue from associated com-

panies, totalled A\$2.45bn, up from A\$1.97bn.

News Corporation said the results reflected an improvement in earnings from operations in Australia and the UK, offset by a slight deterioration in profits from the U.S.

In addition, the company said it had a profit of A\$51.2m from extraordinary items compared to A\$60.4m loss the year before. This year's extraordinary items, were from surpluses on sales of assets less prior tax charges to bring the UK tax accounting into line with Australian standards.

GSH raises Hooker stake

SYDNEY — GSH Investments, controlled by Mr George Herscu, has bid A\$2.20 per ordinary share for 30 per cent of Hooker Corporation the large Australian property group.

GSH, wholly-owned by Mr Herscu and his family, now holds 85.37m Hooker shares, or 19.99 per cent of the issued capital, Reuter.

Kenneth Gooding profiles Europe's leading car manufacturer

Ford takes the long-term view

FORD is satisfied with the progress being made towards getting its European operations into shape, says Mr Harold "Red" Poling, the president. "I would look for profits for this year to end up as good as or better than last year, he adds. In 1984 Ford of Europe's net profit was a marginal \$147m, down from \$251m the previous year.

Europe is Ford's second largest car market and last year the U.S. group took the lead in it for the first time. However, Europe accounted for only 5 per cent of group net profit while contributing 16 per cent of Ford's \$52.4bn world wide sales.

Mr Bob Lutz was drafted back to become chairman of Ford of Europe last summer to work on a new strategy and to cut costs so that the organisation, which made \$1bn profit as recently as 1979, did not move into losses.

"We still look at Europe as having a great deal of potential if we do the job right," says Mr Poling. "We think we have proved with our past track record that we know how to make money there better than anybody else and we will be making good money there in the future."

Ford's share of the European car market has slipped back a little in 1985—it was 11.3 per cent at the end of August compared with 12 per cent for the whole of 1984. Mr Lutz is concentrating more on profitable sales rather than volume.

Mr Poling maintains, however, that "you need to keep a reasonable balance between profitability and share. I don't think you can give up too much share, but on the other hand I think buying share does nothing long term either for an individual company or for the industry."

"I think the major direction an automobile company has to take is to design the product that the customers need and want and provide good value for money. That's our heritage and it has been successful."

Mr Poling insists that the battle in Europe is not simply between the two multinationals but between six car producers, all with about equal market shares. "I think it is more than a battle. It is a striving for a long-term viability of corporations. You cannot lose money in the way of the magnitude that some of the European companies have been doing on a long-term basis. If there is a battle going on, it is to find a way of having a viable, long-

term business."

Ford's answer to the problems of excess capacity and severe competition in Europe might be a wide ranging co-operative arrangement with Fiat of Italy—one of the suggestions put forward by Mr Lutz. This proposal is being evaluated and both Ford and Fiat want to be able to make some formal announcement about their decision before the end of this year.

Mr Poling points out that if Ford of Europe had an association with another vehicles group there would be opportunities to use production capacity more fruitfully; the companies would have tremendous buying power when dealing with suppliers; and the cost of developing and introducing new products would be reduced.

So a deal with Fiat might solve Ford's own excess capacity problems by putting it in a position to increase sales. Mr Poling says that Ford is continuously assessing the balance between the demand for its products and its European capacity.

"Excess capacity means excess cost, and you can't live with that situation long term. If demand and capacity are significantly out of balance you have to consider what alternatives you have to those conditions."

It is also possible that by the end of this year Ford will have found a long-term strategy for its Latin American operations, another problem area for the company.

When Mr Lutz was drafted back to Europe last year his previous job—responsibility for Ford's operations outside North America—was split up and Mr Lindsey Halstead given charge of Latin America and Asia-Pacific.

Mr Poling says: "I felt that the problems were sufficiently serious in South America to require the attention of a full-time top executive. We needed someone to concentrate almost full-time attention on a serious problem and I think it will result in a positive solution a lot quicker."

In particular, Ford has to find a way of improving its position in the Argentinian and Brazilian markets, where economic conditions change rapidly. It faces complex regulations about the level of local content it must build into its vehicles and, in Brazil's case, mandatory export quotas.

General Motors shut up shop in Argentina some years ago, saying it had no long-term potential. Mr Poling points out

that when GM ceased assembling vehicles Ford was still profitable in Argentina. "We have remained profitable except for the past couple of years. The plan we are looking for is one which would return our operations there to profit. We would only pull out when we had exhausted every other possibility."

He says Ford must get its cost base right in both Argentina and Brazil.

Mr Harold "Red" Poling—striving for viability

tina and Brazil. Ford, like the other car producers in Brazil, benefits from the export incentives provided by the Brazilian authorities. But Mr Poling insists his company cannot afford to rely on the incentives continuing. If you are going to be an exporter you are going to have a low cost base or else you have a product you can charge a premium price for.

"I think the best position to be in is the former, so we will continue to concentrate on improving the cost structure so we are sure that in the event of either (a) the Government of Brazil changing the incentive programme or (b) other countries imposing some form of counter action, we will not get into serious difficulties."

At the moment, apart from a slight weakness in the market in Taiwan, Ford's operations in the Asia-Pacific area "look pretty good," Mr Poling warns, however: "But you know how fluid the situation is in the motor industry today. If you had looked at Europe in the late 1970s could you have detected what it would look like today? Two years ago we

would not have predicted that Argentina was going to look like it does today. And in the late 1970s and as recently as the first quarter of 1979 you would not have predicted that the industry in the U.S. would have recovered the way it has today."

Ford revolutionised its prospects in the Asia-Pacific region by handing over production of cars for its dealer networks in the area to Mazda, its 25 per cent owned associate which has its car plants in Japan—the world's low-cost production centre.

"We have an excellent association with Mazda which has been of benefit to both parties," says Mr Poling. "We will always look for additional opportunities that exist for partnership. What we have achieved in Asia-Pacific is an indication of the potential that might exist in other parts of the world."

Mazda will be providing components to a new Ford car assembly plant in Mexico which will export a substantial proportion of its output to the U.S., for example. And the Japanese company will sell about half the production from its car plant at Flat Rock, Michigan—which comes into operation in 1988—to Ford.

The two companies are also involved in a co-operative venture with Kia in South Korea which will also produce more small cars for Ford's North American outlets.

Mr Poling says Ford needs to use low cost cars from Korea and Taiwan to cope with the Japanese, who can land an Escort sized car in the U.S. for about \$2,700 less than it costs Ford to produce there.

The company is addressing that problem by introducing much more automation every time a new model is put into production, and through the so-called Alpha project which involves a completely different approach to designing, developing, building, and distributing cars.

Ford's U.S. competitors, GM and Chrysler, have their own versions of Alpha. Mr Poling maintains: "It has to be one of the biggest challenges the U.S. industry has ever faced."

"To be completely candid I'm not sure we can actually do it. We really want to fill our car plants in the U.S. but when you think a \$2,700 cost disadvantage on an Escort sized vehicle, that is a tremendous task."

"But we are sure going to give it the best try you have ever seen."

LINK TO THE FUTURE

Yesterday the American Stock Exchange and the Toronto Stock Exchange launched the first international two-way trading link between primary equities markets.

Utilizing state-of-the-art technology to electronically link the trading floors, the two-way direct flow of orders will strengthen the market-making capabilities of both exchanges. This will offer investors the most competitive prices for inter-listed Canadian securities available in North America. The link started with six of the most actively-traded issues. Plans call for the link to be expanded to include all inter-listed Canadian stocks, offering a degree of depth and liquidity never before possible. This is truly the beginning of a new era in international trading. And we're proud to lead it.

UK COMPANY NEWS

DRG raising £33m to provide financial flexibility

DRG, the packaging and stationery manufacturer, has notched up a near 50 per cent interim profits rise and is raising £33.4m through a rights issue to provide financial flexibility.

Most of the profits rise, up from £10.6m to £15.7m pre-tax, mainly stemmed from UK operations and was attained on turnover ahead by £20.9m to £312.7m. Interest payable amounted to £3.5m (£3.2m).

The rights is on a one-for-four basis at 165p, which offers a 15 per cent discount to last night's closing price of 190p, down 10p.

J. Henry Schroder Wagg & Co is providing underwriting cover and brokers to the issue are Cazenove & Co.

DRG says the rights will enable it to pursue a more expansionary policy and will be invested against strict financial criteria in new and existing businesses which have good prospects for growth and profits.

These include medical and plastics packaging, branded stationery, office and printing supplies and specialist engineering, and will mainly be in Europe and the U.S.

Extraneous per share for the first six months of 1985 benefited from an effectively lower tax charge of 22.5 per cent (27.4 per cent) and rose from 8.6p to 13.9p. The interim dividend is being raised by 10 per cent to 3.3p.

Retained profits totalled £12m (£3.5m), and included a £2.2m extraordinary credit (debit £1.2m) primarily for property disposals.

While there is still overcapacity and price weakness in some of DRG's markets, the further improvement in the results reflects, the directors say, a generally healthier trading environment and benefits of past restructuring.

Despite a slow start to the year in personal stationery, the manufactured stationery business group reduced "a strong profit performance." There was a significant increase in profits from branded papers where demand was relatively buoyant, accompanied by an easing in the year's cost pressures; there were added benefits from productivity measures.

UK packaging activities are increasingly oriented towards plastics products, in both rigid and flexible form. The investments made in these areas in terms of technological and product development are yielding growing rewards, and we are securing productivity gains which will improve cost competitiveness," says DRG.

Within the engineering business group, activity in the design offices and workshops of Strachan & Henshaw was at a high level, but there was pressure on margins. Profits from

Strachan Henshaw Machinery were above average due to the incidence of completions and lesser dependence on sub-contracting.

Last year the group's performance showed an exceptional bias towards the second half, which is "not likely to be repeated this year." Second half profits in 1984 amounted to £15.4m.

comment

In the last four years, DRG's shares have trebled in price, and have recently been trading at around their all-time high. Taking this with the company's announcement that the paper rights issue has seen its best, it is hard not to dismiss yesterday's announcement as an opportunistic, and is in line with the company's policy of expanding its exploration interests. Further drilling to appraise the potential of the block is expected to start shortly.

Mr Ken Kemp, chief executive of SCR's UK operations, said that full development of the block would have meant an "extended exploration programme" which would not have made financial sense for his company. SCR has no UK offshore production income against which to offset exploration costs.

Southwest considered that it was best to realise its investment in the block, with the intention of using the proceeds to expand its oil and gas activities onshore in the UK and elsewhere.

To this end, Southwest has joined consortia comprising UK and North American companies with a view to making applications in the first onshore round of licensing which closes today.

Samuelson expands

Samuelson Group, film and television equipment supplier, has reached conditional agreement to buy the other half of the Swiss-based Film Service Equipment from Hillingdon Investments. The consideration will be £500,000, satisfied by £100,000 cash and 153,822 ordinary shares.

FES is the ultimate holding company of Samuelson Film Service (Australia). In the year to March 31, 1985 it made pre-tax profits of £1.2m (£1.2m), with net assets at the year end of SwFr 3.61m (£1.13).

Penine Resources, with activities in oil and gas, real estate and retail stores, reduced pre-tax losses for the year to £191,000 (£1.1m), giving attributable losses of £1.85m (£599,000).

The Seahawk land programme, a long-standing oil and gas investment, had a significant success in its Vermilion 97 prospect, which greatly improved the possibility of its profitable sale, says the group.

The turnaround of the portfolio of real estate and petroleum-related assets in Canada, Kansas, has been hit by the oil market and the general difficulties facing farmers. The portfolio continues to be rationalised and enhanced and its piecemeal realisation progresses, says the group.

In January 1985, the group acquired Deloitte, a manufacturer and distributor of family apparel through the party plan system. In addition, it acquired a chain of off-price factory outlet stores, a growing concept in U.S. retailing, which sold to the same range of customers as Dutch-maid. The acquisition, from U.S. Industries, was completed in May 1985 for a consideration of cash and shares resulting in Hanson Trust Group becoming a 25 per cent shareholder in the group.

The group merged its party plan organisation with the Queensway organisation for cash and a 2 per cent override on the next two years' sales made by the transferred members of the party plan. Then the company ceased to manufacture. As a result, the group says, it will enjoy a strong cashflow in the months ahead from the liquidation of inventories and the sale of buildings, which it will use in part to fund the expansion of its Calabot network of 21 stores in Pennsylvania and Florida.

Southwest Resources £8m sale to Ultramar

By Frank Kane

Southwest Resources, the oil, gas and mineral exploration group quoted on the USSE, has sold its subsidiary Southwest Consolidated Resources (SCR) to Ultramar in a cash deal worth approximately £8m.

The main attraction for Ultramar is the 7 per cent interest which SCR holds in block 44/72 in the North Sea. SCR has net current assets of approximately £3m.

The purchase follows the discovery of gas reserves on the site earlier this year, which Ultramar yesterday announced as "promising, and is in line with the company's policy of expanding its exploration interests. Further drilling to appraise the potential of the block is expected to start shortly."

Mr Ken Kemp, chief executive of SCR's UK operations, said that full development of the block would have meant an "extended exploration programme" which would not have made financial sense for his company. SCR has no UK offshore production income against which to offset exploration costs.

Southwest considered that it was best to realise its investment in the block, with the intention of using the proceeds to expand its oil and gas activities onshore in the UK and elsewhere.

To this end, Southwest has joined consortia comprising UK and North American companies with a view to making applications in the first onshore round of licensing which closes today.

Martin Dickson on Imps future after the HoJo disposal Life without a millstone . . .

IMPERIAL GROUP'S clinching of a \$314m (£218m) deal to sell its troubled Howard Johnson hotel and restaurant business brings to an end one of the most ill-starred U.S. investments by a major British company in recent years.

For that reason alone, yesterday's news of a deal with Marriot and Trizec Motor Inns brought sighs of relief in the City—even if the price was well short of earlier hopes.

It may not be a fantastic deal," said one analyst, "but they have eliminated a running sore of major dimensions."

The sale also substantially changes the profile of the group, reducing the major legs of its business from four to three—tobacco, brewing/leisure and food—and making it overwhelmingly dependent on the UK.

A key question now is what acquisition strategy Imperial freed of the Howard Johnson millstone, will now adopt to once more broaden its interests.

Mr Geoffrey Kent, the chairman, was given few clues yesterday, beyond saying that the company's strengths were in fast moving packaged consumer goods and services; that it was too dependent on the UK economy; and that he would like to see greater international business—particularly in the U.S.

Brewing and leisure seems one area it is likely to concentrate on, and there was speculation among analysts, yesterday, that it might be eyeing a regional UK brewer to put together with its Courage subsidiary.

There has also been much speculation that Imperial, with its strengthened balance sheet, could now itself prove attractive as a bid target.

Mr Kent acknowledged yesterday that nowadays no company is immune from takeover, but he added that he was not going to be steamrollered into acquiring companies at a discount, and that he assumed himself to be invulnerable to a bid. But he added that he was not going to be steamrollered into acquiring companies at a discount, and that he assumed himself to be invulnerable to a bid.

Imperial has poured money into the restaurants, but has still not yet managed to make them financially successful, while the Howard Johnson group as a whole has consistently fallen short of budget.

comment

Imperial was looking pretty pleased with itself yesterday, but yesterday's news of the sale of the Howard Johnson group was a marked contrast to the gloomy ones at the year end. Clearly much of the growth has come from the firm's profits contribution of Firth Brown Tools, which S & J has put a lot of work into turning round, but the other main area of growth appeared to have been its old-established garden tools business where an expensive investment in marketing has brought profitable exposure for S&J products on the shelves of the multiple stores. Growth looks likely to continue at an only slightly subdued pace for the rest of the period; hand tools are now getting the same marketing treatment given to gardening tools, there is still more to come from Firth Brown, and France is appearing to have a new old-fashioned better results through cuts in labour costs. North America remains dull, but in spite of this and the chairman's apparent gloom, the group will probably produce £2.25m for the 15 months. On an annualised basis and after a 27 per cent tax charge the shares, up at 185p yesterday, are modestly priced on a prospective p/e ratio of 7.

comment

Imperial was looking pretty pleased with itself yesterday, but yesterday's news of the sale of the Howard Johnson group was a marked contrast to the gloomy ones at the year end. Clearly much of the growth has come from the firm's profits contribution of Firth Brown Tools, which S & J has put a lot of work into turning round, but the other main area of growth appeared to have been its old-established garden tools business where an expensive investment in marketing has brought profitable exposure for S&J products on the shelves of the multiple stores. Growth looks likely to continue at an only slightly subdued pace for the rest of the period; hand tools are now getting the same marketing treatment given to gardening tools, there is still more to come from Firth Brown, and France is appearing to have a new old-fashioned better results through cuts in labour costs. North America remains dull, but in spite of this and the chairman's apparent gloom, the group will probably produce £2.25m for the 15 months. On an annualised basis and after a 27 per cent tax charge the shares, up at 185p yesterday, are modestly priced on a prospective p/e ratio of 7.

Mr Geoffrey Kent... few clues to acquisition strategy

moves, Imperial will be anxious to convince investors that it is buying quality assets and not another Howard Johnson.

The acquisition of the hotel chain was controversial from the very beginning. Imperial, keen to diversify out of tobacco, bought the group in 1980 for \$680m—£280m at the time—then very favourable sterling/dollar exchange rate—but against the judgment of some major institutional shareholders who questioned the price and strategy.

In retrospect, the timing was absolutely right in currency terms, but wrong from a trading viewpoint, with the U.S. about to go into a major recession.

Above all, however, Howard Johnson turned out to have a major weakness—its Orange Roof restaurant chain, on which little money had been spent for years and which had lost touch with the market. "The menu was not right, the position was not right, and the service was appalling," recalls Mr James McKinnon, Imperial's finance director.

Imperial has poured money into the restaurants, but has still not yet managed to make them financially successful, while the Howard Johnson group as a whole has consistently fallen short of budget.

Imperial Foods	31.0	12.1	15.9	24.9

NEI profits are trimmed by exchange rate moves

Northern Engineering Industries, suffered a small fall in pre-tax profits in the first half of 1985. Analysts had been expecting a small rise to £22m, but the electrical, electronic and mechanical equipment maker reported taxable earnings of £21.5m, against £21.7m.

Sir Duncan McDonald, chairman, says that exchange rate variations masked the fact that the company's performance improved during the period. On the same basis as for 1984, this year's interim profit figure would have been £1.9m higher.

Turnover was down 1 per cent from £423.1m to £420.3m. The tax charge was lower at £7.53m, against £8.72m and minority interests took a reduced £1.85m (£2.01m). There were no extraordinary debits this year, marking the end of the group's reorganisation, against £4.6m last time.

That resulted in attributable profits coming out 87 per cent higher at £11.1m, compared with the previous period's £6.47m. From earnings per share of 5.5p (4.95p), an unchanged interim payment of 1.65p has been declared.

Because of a change in the translation of foreign currencies from period-end rates to average rates, the comparisons have been restated.

Sir Duncan says that the company's competitiveness is increasing, enabling it to obtain more business in the diverse markets in which it operates.

Although exchange rate variations could limit the second half, he is confident that the underlying performance will continue to improve.

In South Africa, where in the past NEI has generated 25 per cent of its profits, the chairman says events are dominated by the political and economic climate. An order in NEI Africa is not anticipated, but turnover and

Sir Duncan McDonald, chairman NEI

profit are satisfactory and there is considerable long-term profitable workload in hand.

Activities in both Zimbabwe and Zambia continued at a satisfactory level despite the foreign currency which limited the importing of components.

On the group's international marketing operations, Sir Duncan makes a plea for Government support to maintain and improve its export performance.

"For success in export markets, the ability to provide high technology plant at a competitive price, on time, is essential. This the NEI companies can do. Equally important is the ability to match the competitive credit terms at low interest rates which our foreign competitors are offering."

NEI Nuclear Systems, "in the absence of an established and progressive UK nuclear power programme," is successfully obtaining a range of alternative

business, particularly in refurbishment and modification of existing plant, high quality fabrications and nuclear waste disposal.

A number of reorganisations began to show benefits in the period. NEI Peabody profits improved but it experienced delays in the placing of orders, as did NEI Rayville, which was also restructured last year.

comment

For sometime NEI has been regarded as the states of a yield stock by institutions and these

interims plus the indications given for the rest of the year will do little to change this perception. There have been several false starts over the last two years as to major growth prospects — the Riband project and Extel Corp to name but two.

These hopes have not been fulfilled. What remains is waiting for the result of the Sizewell enquiry. However, it is not clear to what extent NEI will immediately benefit from a green light for PWR, in particular, at Sizewell. Riband is no longer burning but its ultimate contribution to the group could be modest. Extel Corp has not proved a very successful acquisition and has had to be allowed down to stay in the black in a very slow market.

New products for Extel are part of the reason for a growing R & D commitment — almost £30m this year for the group as a whole. In South Africa the weak rand caused almost all the currency problems and although the acquisition of the International Harvester unit led to a dilution of the UK company's stake to 60 per cent, the operation of a subsidiary with 4,000 employees under current turbulent conditions has to be problematic. The maintained dividend keeps the yield attractive at 8.5 per cent but expects a few more shares which closed at 78p yesterday.

Belhaven in talks with Bateman

BY CHARLES SATCHLOR

Belhaven Brewery, the Scottish company headed by Mr Norman Vinn, is engaged in talks with George Bateman & Son, the Lincolnshire brewer.

The purchase of Bateman would give Belhaven a brewery in the South as well as a network of pub outlets. Bateman has a brewery just outside Skegness and 90 pubs in Lincolnshire and the surrounding counties.

It emerged last week that talks between Bateman and Belhaven, the real estate company, had broken off despite an agreement in prin-

ciple reached earlier this month for Midsummer to acquire Bateman.

Bateman first invited offers for its business in early August, but negotiations since then have been delayed because of a disagreement between Mr George Bateman, the chairman, and his two fellow shareholders, his brother John, and sister Helen.

The two men own 40 per cent of the company each, while their sister controls the remaining 20 per cent through a trust. Bateman made a pre-tax profit of £81,000 on turnover of £4.7m.

in the year ended January 1984. Its assets are valued at about £1.5m.

Belhaven has expanded rapidly since Mr Vinn became chairman in March 1984, buying 125 bottles and basket off-licences from Grand Metropolitan and a further 21 off-licences from Courage.

It has taken sizeable stakes in a number of hotel and brewing groups, though some of these shares have later been sold. In July, it took a 6.2 per cent stake in the Llanelli-based Buckley's Brewery.

Fairbairn issue to raise £2.5m

BY TERRY POVEY

Fairbairn has made a virtue of building the kind of homes, with fire places and regency columns, on which the discerning buyer in the South East is keen. So Hill is keen to offer a good response to the offer for sale of almost 5m shares in the Epsom-based company at 120p on October 1.

Turnover has risen steadily for Fairbairn, from £1.78m in the year to March 1981 to £7.88m this year. The offer involves 28 per cent of the company's capital and values it at £21.24m.

Fairbairn previously formed part of the Starwest group of companies owned by Mr Remy Dipe and his wife. Of the shares being offered, 2.5m belong to the Dipees and the rest are new shares. The remaining 72 per cent of the company is

owned by them and they have undertaken not to sell any more shares for at least a year after the listing, which is expected to begin on October 8.

Of the £2.5m proceeds, £1.9m will be used to reduce indebtedness—gearing on a pro-forma

basis is about 65 per cent net tangible assets—and the rest to boost working capital.

For the year to March 1986 the company expects to recommend a total dividend of 2.75p. The brokers to the issue are Capel-Cure Myers.

BOARD MEETINGS

TODAY	DATE
Interim: Associated Book Publishers, BEIC, Bank of Scotland, Bristol Hill and Minerals, Brown and Jackson, Clarke Nickolls and Coombs, Finlay Packaging, Fleming Universal Investment Trust, J. Lyons & Co., Lloyds and Harvey, Rio Tinto-Zinc, Threlkeld, Tibbitts, W. & A. Young, RMC, Reine Industries, H. Young	Oct 4

Strong and Fisher	Oct 1

News Intl. profits advance to £46.8m

News International, UK publishing arm of the Australian News Corporation, raised pre-tax profits by \$6.0m to \$46.7m in the year ended June 30, 1985. Turnover increased from \$457.8m to \$482.1m.

The improvement reflected higher profits from the Sunday Times and its magazine paper, maker, Townsend Hook. The Sun and News of the World newspapers however made reduced contributions.

Advertising revenue increased by 28 per cent during the year at the Sunday Times and 14 per cent at the magazine. The Times achieved a 35 per cent advance in advertising revenue, but higher production costs as circulation figures increased meant the paper again showed a loss.

An extraordinary credit of \$17.85m (\$7.12m) in the 1984-85 results comprised the profit made on the sale of the group's 5.6 per cent stake in St Regis Corporation.

Tax charge was \$14.84m (14.21m) and minorities accounted for \$2.66m (\$2.12m).

Comparative figures have been restated to reflect accounting policy changes concerning the treatment of interest costs on assets under construction and goodwill on consolidation.

The final dividend payable to special dividend shareholders in respect of 1984-85 is 5.375p net, making a total for the year of 10.522p (\$4.558p).

The company says the Times circulation is now 485,000, up 20,000 over the year and 200,000 higher than the figure four years ago when News International took over the newspaper.

The Sun increased sales by 60,000 to 1.155m and the News of the World by 640,000 to 5.2m, but interruptions to production and increased costs hit their profits.

Joan Gray on change of house style at Barratt

Up-market to the premier league

SIR LAWRIE BARRATT is the man who brought showmanship, bunting and the starter home to Britain's staid semi-detached housing market.

But now, after a year which has seen his profits fall to \$4.1m, against \$35.6m, and the number of houses his opulent company builds fall to 10,300, compared with 13,700 last year, the showmanship is more muted — and Sir Lawrie has gone up-market.

The jolly bunting has been replaced by a yellow and white marquee with chandeliers, and the high volumes of cheap starter homes have been replaced with Tudor-beamed houses for affluent trade-up buyers.

There has been a major change in product mix," said Sir Lawrie. "Houses for first-time buyers are now 60 per cent of our sales compared to 70 per cent two years ago. We are planning for 40 per cent sales to first-time buyers in the new financial year, and for upper and middle market sales to rise to 70 per cent in the following financial year."

He is also comfortable with his new lower output of 10,000 or so houses a year in the UK. "I don't plan on seeing our volumes climbing," he said.

"We plan to trade in the UK on 10,000 houses a year and with greater profitability and growth coming from our move up-market."

For a man who used to say his strategy was "surviving on volume not chasing profit margins" an old idea that first-time buyers were the most stable sort of demand, this is a major change.

It is partly a question of price," he says. "The ever-increasing cost of land in the South East—the most his company has paid for land so far—was \$800,000 an acre in London's Fulham — just makes it uneconomic to build for first-time buyers."

Even though most women want a new house like men want a new car, it's difficult to afford now because the price of land in the South East makes it uneconomic," he says.

Land now accounts for up to 40 per cent of the price of a Barratt house in the South East, compared to between 10 per cent and 25 per cent in the rest of the country.

The plan is that concentrating on fewer higher-priced houses is

Sir Lawrie Barratt, chairman

going to give the company benefits of reduced overheads, higher margins, greater control, and the hope of increased profits without having to chase increased turnover.

"Margins on middle and upper price houses are greater than on smaller houses," explained Sir Lawrie. "Whereas the margin on a smaller house averaged 10-11 per cent pre-tax in the good years, margins on more up market houses are 12.5 per cent or more pre-tax."

It's the most lucrative sector of the market but the most volatile if trade-up buyers can't sell, so we have to try and overcome the problems with services such as part exchange and help with selling their first house," he said.

Over the country as a whole, the average price of a Barratt house has already risen from £29,000 to £33,000 over the last year. He expects it to rise to £40,000 this year, with the average being pushed further by the policy of concentrating on building in the South East which now accounts for 22 per cent of sales with an average selling price of £60,700.

The company also benefits from overhead savings by building 10,000 houses a year — as shown in Barratt's results announced yesterday.

Barratt now operates with 4,250 full time staff compared to 5,500, and has saved £5m on administrative costs; selling to more affluent buyers with no need for a mortgage subsidy scheme will save the £4m it spent on mortgage subsidies this year. Cutting the number of sub-

sidies from 29 to 19 will, Sir Lawrie hopes, "give us a more manageable company and reduced volumes will help us to keep quality up."

Decreased volumes also meant a saving on the company's land bank. As part of the rationalisation programme, Barratt sold the surplus land for £8m last year. It now has 25,000 plots compared to 30,000 at the beginning of the year — enough for two and a half years building at the new lower volumes, and with a lower overhead to service.

The decision to concentrate on more affluent buyers is clearly demonstrated by the company's new Premier collection of house styles, launched earlier this month.

The Premier collection ("The name is purely fortuitous. It's nothing whatsoever to do with Mrs Thatcher's decision to buy one of our houses," said Sir Lawrie) is all brick and decorative beams and traditional construction, with features such as weather vane and dormer windows, two bedrooms, two bathrooms.

The Premier collection is now being built on 125 sites, and will account for 100 per cent of Barratt's output once the new styles are phased in.

The only area of Barratt's business which retains the former high volume pattern is refurbishing old council housing to provide low cost homes, such as two bedrooms flats for £28,000 in Wandsworth, for example.

The company currently sells 800 refurbished houses a year and plans to keep output at that level. "The margins on refurbishment are less, but we sell two or three or four a week."

they remain confident of the medium and long-term future. They add that priority will be given to utilisation of group resources in continuing to expand activities in southern England.

There was an extraordinary debit of £4.1m (nil) for the period representing an additional tax charge in respect of stock relief previously claimed, but which has now been disallowed.

After this charge, and dividends of £13.5m (same), there was a loss of £14.3m. This is compared with a retained balance of £15.5m.

HELENE OF LONDON has exchanged conditional contracts to acquire Peter Barren (Models). Consideration is 3m, 10p Ordinary (which Helene has undertaken to place on behalf of the vendors) together with an additional cash consideration if profits for the five years ended December 31, 1990 exceed certain levels. Net tangible assets of Peter Barren at June 30, 1985 were £670,000 and pre-tax profits for that year amounted to £219,000.

JOHNSON AND Firth Brown still has a deficiency of distributable reserves and the board is unable to recommend a redemption in the payment of the preference dividend, which is next due on September 30, 1985. The ordinary offer was declared unconditional. The offers are not yet wholly unconditional.

ALBANY INVESTMENT Trust has increased total income from £131,005 to £160,142 in half-year ended August 30, 1985, but says rate of growth will not necessarily be maintained in the second half. After tax £45,684 (£37,210) net profit £100,595 (£82,938) for earnings of 2.15p (1.73p). Interim dividend increased to 1p (0.8p) net but does not indicate a rise in the

final. Net asset value per share 111.21p (112.92p at February 28), contributed to a reduced interest charge and this benefit should continue. Earnings rose to 2.9p (1.94p) and the interim dividend is lifted to 0.55p (0.5p) net. The year-end is being changed to December 24. The company's 25p shares are traded on the USM.

MURRAY GROWTH TRUST has reached agreement, subject to final verification by the auditors of Merchant Navy Officers' Pensions Investment, as to a 120.42p net asset value attributable to each Murray Growth ordinary and B ordinary share as at September 4, 1985, when the ordinary offer was declared unconditional. The offers are not yet wholly unconditional.

WINGATE PROPERTY Investments raised pre-tax profits from £377,000 to £409,000 in the six months to June 30, 1985. The

RHÔNE-POULENC

1985 FIRST HALF PROFITS: +32%

PROFITS

After the significant increase in financial results recorded in 1984, net profit for 1985 first half shows a further move in the Group's earning capacity. This increase (+32%), clearly above activity (+10%), reflects Rhône-Poulenc ongoing effort to achieve high profitability.

Key figures 1st Half

	(in millions of French francs)	1984	1985	Δ %
Sales		26,166	28,848	+10.2
Cash Flow		2,041	2,577	+26.3
Net Profit		786	1,038	+32.1

SUCCESSFUL STRATEGY

These performances reflect the success of the strategic orientations:

- priority to development of high-value added sectors and products of advanced technology
- international growth
- streamlining of less profitable activities

The Group's results and its considerable investment programmes bring back Rhône-Poulenc among the leading chemical groups worldwide in the challenge for innovation and competitiveness.

OUR RESULTS MATCH OUR AMBITIONS

UK COMPANY NEWS

Steetley rises to £16.5m despite downturn in UK

DESPITE a downturn in the UK, the Steetley group has pushed up its first half profit from £16.7m to £16.5m and is lifting the interim dividend from 4.5p to 5p net.

In the UK the operating profit fell from £16.1m to £13.9m but chairman Mr. David Doune says in the circumstances this is a most creditable performance.

All divisions continue to trade strongly and he is confident of a satisfactory result for 1985. Last year the pre-tax profit came to £32.7m and the dividend total was 12p.

In North America the operating profit rose from £2.1m to £3.6m, the minerals operation showing improved performance in all sections. Actions taken to restructure the distribution business in Canada are beginning to show results.

Western Europe produced an improvement from £207,000 to £350,000 following better results from the French construction materials business. The Mid/East contribution fell to £267,000 (£268,000).

The pre-tax profit for the half year would have been £460,000 lower had exchange rates ruling on June 30 been used. The rates used in conversion are those adopted in the 1984 accounts.

Mr. Doune says construction activities in the UK were adversely affected by the bad weather in the first two months.

Mr. David Doune, chairman of Steetley

And additional energy costs resulting from the miners' strike continued to affect the refractory and brick businesses. The property side made a useful contribution from the continuing development of surplus group sites.

The new £12m brick plant at Parkhouse has been commissioned and will contribute to profits in the second half. Group turnover in the first half of 1985 came to £206m (£205m).

comment

Apart from a few red faces among the analysts there were few surprises in Steetley's interim results. In the UK the harsh winter conditions saw a fall in demand but the impact of this was partly mitigated by some £1m in property sales (in the same period in 1984 there was very little contribution from this area). In the second half the new 50m bricks-a-year Parkhouse plant will be contributing for the first time and margins on its products are said to be "interesting". Certainly 50 people producing 10m bricks each some promising. One area of major improvement has been North America where the Canadian electrical and industrial equipment distribution business has finally made it into the black. In general terms the UK market for Steetley's aggregates remains flat with competition for new quarrying getting tougher and environmental considerations weighing more heavily. The second half should see the benefits of cheaper NCB supplied fuel (in the first half about 5m extra was spent on imported solid fuel) and Parkhouse and pre-tax profits are seen as reaching £36m. The shares at 337p, down 9p, seem well up with developments on a prospective p/e of 10 given a 40 per cent tax charge.

First Castle advances to £1.5m

A MARKED improvement in turnover, profits and dividend is announced by First Castle Electronics in the six months to July 31, 1985.

Turnover is up from £2.41m to £1.44m, an increase of 36.4 per cent, pre-tax profits from £1.1m to £1.45m, a rise of 31.8 per cent, and the interim dividend is raised from 0.247p to 0.63p per share on the capital enlarged by last January's rights issue.

Tax takes £26,000 (£27,100), leaving net attributable profits of £1.42m (£1.01m) and earnings per share of 4.7p (3.5p adjusted).

Mr. L. J. Connor, chairman, says the divisionalisation of the company has enabled the company to shorten lines of communication and to improve the effectiveness of management. He adds that although in the current industrial climate the performance of the various operating units within the group had been more variable, the new structure had enabled First Castle to concentrate management resources where they were required.

Within the specialist technology group, Centronic has secured a major order from the MoD for the helicopter weapon simulation system known as ATLAS. The order, obtained in the face of fierce competition, further expands the weapons simulation product range.

Centronic is currently negotiating for several major contracts but the timing of the conclusion of these negotiations is not yet determinable.

Mr. Connor says that construction work is now well advanced on the new solid state factory at the Centronic site. Commissioning should commence late this year with production coming on stream early in 1986.

Market penetration by Compuser, the monitor company, has been disappointing but Centronic Inc. has continued to expand rapidly and the new activity, as a contractor to the U.S. Department of Defense, has been promising.

Profits follow AEC changes

FOLLOWING a change of both name and direction American Electronic Components reported pre-tax profits for the six months to the end of June 1985 of £16,000. This was from turnover of £1.04m, which arose in the period from April 17 when the company acquired Durakol, the U.S. based maker and supplier of switch and relay mechanisms.

Under its previous name of American Oil Field Systems, the U.S.-based company made a taxable loss in 1984 of £2,450. At the time of the notation in April, AEC forecast full year profits for Durakol of £4.1m. It achieved £4.1m.

The tax charge was £20,000, leaving earnings per 20p share at 1.3p basic and 1.5p adjusted. No dividend will be paid for the period but the directors forecast a total payment of £5.75 net for the year to June 30, 1986.

Readymix better

Some recovery in ready mixed concrete margins and the continual trimming of overheads and costs have enabled Readymix of the Republic of Ireland to reduce its first-half loss from £474,000 to £123,000, equal to some £38,000.

Volumes, however, remained depressed. This applied particularly to quarrying operations where low demand for road materials severely cut the level of stone sales.

As to the short-term prospects in the construction industry the directors say there are not encouraging, and the management is currently looking at further measures to reduce costs and restore profitability. The group has been in the red for the last three years, the cumulative pre-tax losses approaching the £2m mark.

The company is a subsidiary of Readymix Holdings, in turn a part of the BMC Group.

Boase halfway profit nears £1.5m

THE ENLARGED advertising agency group Boase Massimi Pollitt has produced a pre-tax profit of £1.48m in the half year ended June 30, 1985, on a turnover of £24.18m. The group is performing well, with all major business companies fulfilling expectations, the directors state.

They say the profile of both Boase Massimi Pollitt Partnerships and Marketing Solutions business this year is biased to the second half, so the figures do not reflect the likely pattern of the full year's performance.

This is the first time that figures from Marketing Solutions have been included. Turnover and profits of B&M for the first half of 1984 came to £28.45m and £1.05m respectively. The interim dividend is raised from 1.25p to 1.5p net.

On detailed investigation the directors at Marketing Solutions in the U.S. was found to be unsatisfactory and the operation was closed in April. However, the group has been able to invest in new company's investment and has started a

wholly owned subsidiary in New York.

On prospects, the directors say the three new ventures started in the period are set to contribute to profits in 1986. The ventures were set up as part of the strategy to build long-term profits. B&M Business Communications and Angotti Thomas Ridge are already generating significant billings and the newest entity, Davis Wilkins, a mainstream consumer advertising agency, has made a promising start.

With the overall growth of the UK advertising industry slowing in the first half of 1985, the B&M group has already started to reap the benefits of a spread of marketing service activities, and the directors look forward to a successful full year.

After tax, £364,000, the net profit for the half year came to £322,000 for earnings of 6.6p per share.

comment

The market was expecting something rather higher than £1.5m

ever, the shares look fully valued at a 7 1/2 x/24 assuming profits of £3.9m on a 52 per cent tax charge.

Electronic Data raising £1m with USM placing

BY RICHARD TOMKINS

Electronic Data Processing, a Sheffield-based computer company employing 110, is coming to the US to raise £1m by placing 1.5m shares of 5p each at 75p a share, through brokers Henry Cooke Lumsden.

The issue represents 25.5 per cent of the enlarged share capital and will raise about £1m net for the company. EDP's market capitalisation at the placing price is £4.5m.

EDP was set up as a computer bureau by a group of Sheffield businessmen in 1964. In 1972 the board decided that stronger growth prospects lay in providing business customers with a more sophisticated on-line bureau service and ultimately in the sale of complete in-house mini-computer systems.

Mr. Michael Neller, the present non-executive chairman, recruited Mr. Richard Jovitt, the present managing director and chief executive, to lead the company's development.

EDP is now a broadly-based computer company operating five divisions. Its main activity is distribution in the UK, Europe and the Middle East of the Mentor family of microcomputers under an agreement with ADSS, a U.S. computer products manufacturer which is a wholly-owned subsidiary of NCR.

Since its appointment as a distributor in 1981, it has sold some 225 Mentor systems to commercial, industrial and governmental organisations. About 75 per cent of sales are made

through EDP's 20 authorised dealers, and the rest by EDP itself.

EDP's other activities are maintenance and engineering, the development of software products, the bureau operations, and a training and education division.

The company says the market for the types of computer systems it supplies has been disrupted by the sale of the EDP's data worth £300m in the UK alone this year and for 14,000 units worth £560m in 1987. The directors are confident that EDP and its dealers will be able to increase their penetration of this growing market.

EDP intends to use the £1m raised to expand its dealer network in Europe; to finance the relocation of its education and training centre, engineering and technical support functions to Northampton; to fund further software development; and to provide working capital to support the company's growth.

EDP's turnover in the year to September 30, 1984, was £2m against £2.4m the year before and pre-tax profits rose to £331,000 from £108,000. In the six months to March 31 this year EDP made pre-tax profits of £310,000. It is forecasting a figure for the full year of at least £380,000, putting the price at the placing price of 75p on a prospective p/e ratio of 1.1 after a 44 per cent tax charge.

All-round progress lifts Watnoughs by 12%

Watnoughs (Holdings), colour printer, publisher and process engraver, achieved a 12 per cent rise to £274,000 in taxable profits for the six months to June 30, 1985.

Turnover increased by 14 per cent from £12.2m to £13.8m with all subsidiary companies contributing to the advance.

The interim dividend is 1.7p per share (1.7p) on the capital increased by the one-for-four rights issue in March. After tax of £137,000 (£141,000) the net profit was £717,000 (£641,000) and earnings per share were 7.07p (6.99p).

Demand for the group's paper and gravure and web offset printing capacities was maintained throughout the period with sales of quality colour literature for mail-order, contact, leisure and publishing clients continuing at a high level. Good progress was also achieved in the security printing and packaging interests, the directors state.

The contract for the printing of You Magazine was originally

to commence with the issued date November 3 1985. However, an earlier opportunity arose for Watnoughs to commence printing from the issue dated August 19 1985.

Mr. P. G. Walker, the chairman, however, reiterates that full benefits from the You contract will not materialise until 1986. In particular, revenue from the You contract for the second half of the year will bear the full cost of recruitment and training of additional staff in advance of the commencement of the contract.

MACALLAN-GLENLIVET, the whisky distiller, made lower pre-tax profits of £202,000 (£238,000) in the first half of 1985, which reflected high interest rates and the decision to withhold stocks from the mature whisky market. Interest charges rose to £368,000 (£256,000). Turnover was unchanged at £2.21m. The interim dividend is 1p (same) net. The directors expect 1985 profits will be in line with the £350,000 forecast at the time of the rights issue.

Scott & Robertson profit down as margins fall

Scott & Robertson, manufacturer of packaging products and fabrics, reveals a fall in taxable profits from £556,000 to £402,000 for the six months ended June 30, 1985. The interim dividend is maintained at 0.5p, however, last year's final being 1.5p.

Turnover moved ahead slightly from £9.78m to £9.81m. Although the directors anticipated that the level of profit would be affected by the move of subsidiary, Anaplast, to a new factory, and the relocation and installation of plant at both Ardara and Greenock, mid-year figures were further adversely affected by certain operating factors outside the company's control which combined to lower margins.

The trading conditions encountered by Thomas Boag were the most difficult, directors say, for several years and its

contribution was less than expected. The other two subsidiaries, Plast-Covers, and Tever Jones in particular, traded satisfactorily.

The directors add that profit margins improved in the third quarter and both production and sales are currently increasing.

In May the directors pointed out to shareholders that the move from Irvine to the new factory at Ardara disrupted output and the prolonged delay in satisfactory delivery of new plant from West Germany proved to be more costly than anticipated.

And they said that suppliers of polymer had been applying price increases, which rendered it impossible to recover those increases on orders for polythene products. These problems would have an effect on first half results, directors stated.

The Company intends to assemble and sell low-cost automated colour matching products. Having completed and paid for the three years of development of its first product, the DCM-1100 Colour Matching System for retail paint stores, the Directors believe that the Company will operate profitably upon commencing production and sales. The product allows a paint retailer to determine accurately the correct pigments to match any colour prior to mixing the paint, thereby eliminating the often unsuccessful attempt to match one of a limited number of paint colours to a sample such as fabric or wallpaper by using paint sample cards. Throughout the development process, the Company has worked closely with many U.S. paint manufacturers.

Application has been made to the Council of The Stock Exchange for the whole of the issued share capital of the Company to be admitted to the Unlisted Securities Market. A proportion of the shares being placed is available to the public through the market. It is emphasised that no application has been made for these securities to be admitted to listing.

Particulars of the Company are available in the Extra Unlisted Securities Market and copies of such particulars may be obtained during usual business hours on any weekday (Saturdays and Bank Holidays excepted) up to and including 14th October, 1985 from:

APPOINTMENTS

Changes at Dowty

Mr Robert Hunt, chairman of the DOWTY GROUP, retires on 31.10.1985. Viscount Sandon joins the board on January 1, 1986, as a non-executive director and as chairman-elect. He will become non-executive chairman on June 1, 1986. Lord Sandon is a deputy chairman of the National Westminster Bank. Mr R. E. J. Roberts will become a non-executive deputy chairman of the group from January 1, 1986. He is group managing director of Guest, Keen and Nettlefold.

Mr Michael Williams has been appointed director general of the British Health-Care Export Council (BHEC) from October 1. He will succeed Mr David Pellingham who is joining Medicus Products, part of the Lingard Group.

Mr Paul Curtis is to join the main board of INTERNATIONAL DISTILLERS AND VINTNERS, as an executive director. He will be assuming responsibility for the group marketing function and also its overseas subsidiaries based in France, Germany and the Netherlands. Mr Curtis comes from the Mars Confectionery Group where he was marketing director. He will replace Mr Patrick Copeland on IDV's board. Mr Copeland was appointed earlier this year as general manager of Cincano International.

Dr George Mathewson has been reappointed chief executive of the SCOTTISH DEVELOPMENT AGENCY for a further five years from February 1.

Lloyds Bank retail banking restructured

LLOYDS BANK has made changes to its UK retail management structure, under its director, Mr John Dawson. Mr Norman Parker is appointed senior general manager, with responsibility for branch banking matters in the north and east, and in Scotland, and for the development of technology-based customer services and for administration. Mr John Davies, general manager for the Midlands and South Wales, has special responsibility for corporate market planning and development. Mr Gerry Solomon, general manager for the London area, has similar responsibility for the personal market, as has Mr Peter Leech, general manager for the south, for the agricultural market. Mr Ken Pinner is general manager of trust division, which will be renamed financial services and trust division from January 1, 1986. Mr Stephen Maran remains managing director, Lloyds Bank, and Mr Ray Mercer remains general manager, Black Horse Agencies.

Mr Michael Bealing is relinquishing the managing directorship of VICON at the end of November. He will remain on the board as a non-executive director. 25 years after starting

Vicon in the UK, he wishes to have more time to devote to his other interests. His successor from December 1, is Mr Peter Smith, who has been sales director for the past 8 years.

ORGANISED OFFICE

DESIGNS has appointed Mr Michael Russell as finance director. He joined OOD in 1968. He is also company secretary and director responsible for space planning consultancy.

Mr MICK NEWMARCH

Mr Mick Newmarch has been appointed a director of PRUDENTIAL CORPORATION. He is chief executive of Prudential Portfolio Managers, investment management arm of Prudential Corporation.

Mr Fred Clarke, former director and general manager (marketing and services) of 1234 UK and for the last three years chairman of Royal Ordnance, has joined WASP SOFTWARE, as chairman.

PEAT MARWICK has appointed the following partners, from October 1: Mr James Nelson (Glasgow), Mr William Bowman (Aberdeen), and Mr Mark Heydon (Birmingham).

Mr J. R. Anthony Nottingham, a member of the Stock Exchange, has joined the Truro office of VIVIAN, GRAY & CO., with offices in London, Cheltenham, Hereford, and Gloucester.

LAPORTE INDUSTRIES (HOLDINGS) has appointed Mr O. Lane Renfrew as vice-president, Laporte America - Wood Chemicals. Mr S. R. Almsough, general manager of the Interior UK Business Group at Warrington, is appointed president, Chemical Specialties, Valdeira, Georgia. Mr D. Heathcote, general manager of Laporte Fluorides and Minerals, is appointed general manager of the Interior UK Business Group. Mr M. E. G. St Amour, deputy general manager of Laporte Fluorides and Minerals, is appointed general manager of this business group. All these appointments are from October 1.

CORRECTION NOTICE

We have been asked to point out that Mr Robert Kelly has been appointed chief executive of BAXTER HOARE, and Mr John von Spreckelsen remains chief executive and managing director of Bowater Freight Services.

COMMODITIES AND AGRICULTURE

Dialogue of the deaf at Farm Council

BY IVO DAWNAY IN LUXEMBOURG

IT WAS business as usual for the EEC's Farm Council yesterday. Refreshed from their summer holidays, the ministers met for their first discussions on the European Commission's controversial Green Paper (discussion document) on the future of the Common Agricultural Policy.

Unanimously they agreed that something needed to be done. But to a man they disagreed as to what it should be.

Indeed, though the informal meeting took place harmoniously, the other range of divergent opinions was remarkable even by the Common Market's generous standards.

Mr Frans Andriessen, the Farm Commissioner, began the proceedings by warning once again of the scale of the surplus and the need for urgent action. He pointed out that when all products are taken together, community

output outstrips supply by between 15 to 20 per cent, and disposal costs are rising.

Mr Henri Nallet, the French minister, told his colleagues that while the reforming Green Paper might be broadly welcomed, it should not be treated as a "holy book". Farming was not like industry as its basic unit—the family farm—was not strong enough to allow laissez-faire policies to work.

Mr Michael Jopling, his British counterpart, argued conversely that the classical laws of supply and demand, fuelled by restrictive pressure on products prices, must be the main mechanism for reform. And he opposed the prospect of a co-responsibility levy on cereals farmers, favoured by many of his colleagues.

Both these British positions were rejected by Herr Ignaz Kiechle, the German minister. The rule of the CAP was as a social support, he argued,

and economic forces should play second fiddle to maintaining farmers' incomes.

Mr Andriessen replied that both functions should apply a sensible compromise position from which will stem the inevitable disputes over exactly how this should be brought about.

But the ministers did find one area of agreement—that budgetary discipline provisions restricting farm spending should not necessarily be rigidly imposed in future. However, it is unclear whether Mr Jopling was in the room at the time of this discussion as he is usually a strong supporter of such restraints.

Certainly, the EEC budget ministers will disagree with their farming colleagues.

Perhaps the greatest novelty yesterday was the forthright presence of Mr Alvarez Barreto, the Portuguese minister. He told the farm council that he was

totally behind the Green Paper but felt obliged to add the small point that none of its restrictions should apply to Portugal as her high priced food made the country a special case.

Mr Barreto is clearly learning the ways of the EEC fast.

Almost inevitably Mr Austin Deasy, the Irish minister, chipped in that Ireland's minority problems in the farm sector meant it too would have to be an exception.

At that the council session closed amid promises to discuss it all again, probably until Christmas.

The ministers were then whisked off to the Luxembourg wine growing town of Echternach—perhaps their spiritual home. Echternach's annual civic celebrations involve her citizens marching through the streets in the town square, two steps forward, two steps back.

It takes all day.

EEC court backs sugar trader over loss of £1.67m deposit

BY IVO DAWNAY IN LUXEMBOURG

A RULING announced yesterday by the European Court should ensure the return by Brussels of a £1.67m deposit forfeited by a London sugar trader after a secretarial oversight.

The money had been lodged as a security with an EEC Intervention (market management) Board by E. D. & F. Man (Sugar) in July 1983 as a routine procedure after its tenders, representing 30,000 tonnes of sugar for export, had been accepted.

Under Community provisions, the company was then required to apply for export licences by telefax within four working days. But when the appropriate licence arrived, it had missed the mid-day deadline by nearly four hours and the £1.67m security was lost.

In its submission to the court, Man claimed that the oversight

occurred because an employee was sick and her temporary replacement was overwhelmed with work. It contended that forfeiture of the security was "grossly unfair" and broached the principle that the penalty should be in proportion to the offence.

Lawyers for the European Commission argued that the late dispatch of the telefax breached Community regulations and could not be exempted under force majeure provisions.

Application for export licences within the time limit was a necessary primary obligation for the proper management of the market.

But the Court found that the essential primary aim of the regulation was to ensure that exports were carried out and that forfeiture of the entire

deposit must be considered "too drastic" a penalty for failure to meet the deadline.

It therefore ruled that the regulation used by the Commission to enforce forfeiture of the deposit was invalid. Man now seems certain to win its action in the UK's High Court for repayment of the money.

Surge workers from Clyde-side in Scotland lobbied a conference of European and Third World parliamentarians in Inverness yesterday against British Sugar's application for a larger EEC production quota.

Mr John Jackson, shop steward convenor at the Tate and Lyle refinery in Greenock, said that if British Sugar Corp is allowed by EEC Ministers to boost sugar beet production, the plant—which relies on imported cane sugar—may have to close with the loss of more than 300 jobs.

U.S. quota cut sparks anger in Caribbean

By Tony Cozier in Bridgetown

SUGAR PRODUCING countries in the Caribbean have reacted sharply to the recently announced reduction in their U.S. sugar import quotas.

Mr Harold Davis, the chairman of the Caribbean Community sugar producers' association, said the reduction in the Caribbean quota from 134,400 tonnes for 1984-85 to 95,844 tonnes for 1985-86 deals "a further blow to developing countries depending on sugar exports for a large part of their foreign exchange earnings."

He estimated that it would amount to a loss of about \$10m for Caribbean producers—Barbados, Belize, Guyana, Jamaica, Trinidad and Tobago and St Kitts.

The severe impact of these sugar quota cuts on Caribbean countries and, indeed, on all Caribbean Basin Initiative (CBI) sugar exporters, goes a long way to undermine any good that the CBI might do and seriously contradicts the U.S.'s declared objective of making a special effort to help developing countries in the region," he said.

The U.S. Department of Agriculture announced 10 days ago that it was cutting the 1988 import quota to 1.7m short tons from 2.4m in 1985.

This was a smaller reduction than expected, and was seen at the time as an effort to appease Caribbean and Latin American sugar producers.

The move has also provoked uproar among U.S. sugar growers, since the amount of sugar available in the country next year will be well in excess of demand, and this is bringing pressure to bear on domestic sugar prices.

Further Indian imports expected

BY P. C. MAHANTI IN CALCUTTA

INDIA WILL be importing a further 1m tonnes of sugar over the next few months, according to reports in the financial Press. The country has already imported 1m tonnes of sugar this year.

Sugar imports on a large scale have become necessary firstly because of a lower expected output this season and secondly because of a rapid rate of increase in consumption

by the country's growing population.

According to the Indian Sugar Mills Association internal consumption of the commodity, which was 7.7m tonnes in 1983-84, is likely to touch a new high of 8.2m tonnes during the current season, which is about to end.

The offer may rise further to 9m tonnes in the next season.

The current season's production

is just about 7m tonnes.

The Association is unhappy, however, that the Government, instead of taking steps to boost domestic production, is resorting to what it claims are unnecessarily liberal imports.

The world sugar market may be weak at the moment, it says, but this situation will not continue for long, especially when it becomes known that countries like India are planning large sugar imports.

Tin consumers likely to turn down cash plea

By Andrew Gowers

TIN PRODUCING countries are likely to press consumers today to join them in making a voluntary cash contribution to the International Tin Council's hard-pressed buffer stock—but almost certainly in vain.

The producers agreed at a meeting in Canberra earlier this month to ask member governments for a significant and effective contribution to the Council, which operates the tin market's price support system.

Council officials stressed yesterday that they were not calling for extra funds. But producers are expected to raise the issue in the corridors of the meeting this week.

On the London Metal Exchange, tin came under heavy selling pressure yesterday, taking prices to their lowest level in 17 months.

Cash standard metal dropped £187.50 on the day to an unofficial close of £8,725 a tonne.

Malaysia and Indonesia meet on export conflict

BY KIERAN COOKE AND WONG SULONG

THE MALAYSIAN Minister of Primary Industries, Datuk Paul Leong, yesterday wound up two days of talks in Jakarta aimed at easing tensions between Malaysia and Indonesia over the export of key commodities.

In a meeting with Rachmat Saleh, the Indonesian Trade Minister, on Monday, Datuk Leong expressed concern about Indonesian commodity exports—often claimed to be a threat to Malaysia's exports of rubber, palm oil and tin. But he expressed the hope that "solutions" could be found.

There have been bitter allegations by Malaysian producers of Indonesian price-cutting. However, Datuk Leong himself has said that plantation companies need to work to meet what he calls the Indonesian challenge; he says that productivity must be increased and costs reduced.

Indonesia is felt to have big advantages over Malaysia in the export of many commodities due to cheaper labour costs

Gas shortage hits Polish grain crops

By Christopher Bobinski in Warsaw

A MARKED fall in Soviet supplies of natural gas to Poland in the first half of this year has seriously hit production of nitrogen fertilisers and affected this year's results of the grain harvest, official figures published here suggest.

The situation has also led to a call from the Warsaw-based Polish Ministry of Agriculture for additional imports of natural gas from Holland and Nigeria to supplement deliveries from the Soviet Union which at present is Poland's sole supplier.

Senior officials at the Agriculture Ministry have estimated that this year's grain harvest could have been 1.5m tonnes higher if not for the fertiliser shortages in the winter and early spring. As it is, the grain harvest should reach around 23m tonnes this year.

Tin consumers likely to turn down cash plea

By Andrew Gowers

TIN PRODUCING countries are likely to press consumers today to join them in making a voluntary cash contribution to the International Tin Council's hard-pressed buffer stock—but almost certainly in vain.

The producers agreed at a meeting in Canberra earlier this month to ask member governments for a significant and effective contribution to the Council, which operates the tin market's price support system.

Council officials stressed yesterday that they were not calling for extra funds. But producers are expected to raise the issue in the corridors of the meeting this week.

On the London Metal Exchange, tin came under heavy selling pressure yesterday, taking prices to their lowest level in 17 months.

Cash standard metal dropped £187.50 on the day to an unofficial close of £8,725 a tonne.

Platinum and palladium outlook 'promising'

BY JOHN WICKS IN ZURICH

THE FUTURE of the platinum and palladium markets is "promising," according to a study published by Credit Suisse. The Zurich-based bank forecasts that demand will grow at a faster rate than supply for both metals.

In the case of platinum, the report says demand should exceed supply by about 500 kilos this year following a 4-tonne supply surplus in 1984. For 1986 the demand surplus is expected to rise to as much as 6.5 tonnes.

With regard to supplies, Credit Suisse points out that South African producers are working close to full capacity and will not be able to carry out any major expansion for some years to come. Soviet supplies have fallen back in recent years, due partly to what the bank sees as increased strategic requirements on the home market and a certain replacement of platinum exports by those of palladium.

In all, platinum supply is seen as growing slowly from

85.5 tonnes last year to an estimated 88 tonnes in 1985 and 89 tonnes next year, the result solely of small increases in South African sales.

Demand is expected to rise sharply, from 81.5 tonnes in 1984 to some 86.5 tonnes this year and 94.9 tonnes in 1986, a major share of sales going to Japan and North America, with estimated 1986 consumption of 41 and 29 tonnes, respectively.

On the palladium market, Credit Suisse draws attention to a 36 per cent growth in Soviet exports since 1980. These are seen as rising from 52.6

tonnes in 1984 to 55 tonnes this year and 57 tonnes next year. Together with a gradual increase in South African supplies—to a 1986 level of 32 tonnes—this will bring world supply up to around 100 tonnes.

At the same time, world demand is put at some 108 tonnes next year, compared with an estimated 101 tonnes this year and 96.4 tonnes in 1984. Major markets are again Japan, with a forecast 1986 total of 49 tonnes, and North America, with a probable 33 tonnes.

Demand patterns for both metals are considered positive, in view both of general favourable business conditions and the likelihood that there will be no further drop in inflation. While the expansion of U.S. strategic platinum and palladium reserves is said to be delayed, Credit Suisse looks for increasing needs on the part of investors and high-technology industry.

URANIUM: Nuxeo exchange value, \$ per lb U₃O₈, 16.00.

LONDON MARKETS

ZINC PRICES, which have been under pressure for some time because supplies, despite substantial production cuts, have stubbornly remained above the sagging consumption level, were further depressed yesterday when U.S. producers announced a 2 cent a lb cut in their selling prices. The move was thought to be linked to the announcement this week that world stocks rose by 10,000 tonnes in August. London Metal Exchange zinc prices sank to the lowest levels for more than two years before rallying somewhat as sterling slipped back against the dollar in the afternoon. But the high grade cash position still finished \$6 down on the day at \$472.50 a tonne. Coffee prices continued weak with the November position adding \$22 to Monday's currency-inspired \$78 fall.

LME prices supplied by Amalgamated Metal Trading.

FINANCIAL TIMES

WORLD STOCK MARKETS

WALL STREET

A tempered response prevails

COOLER counsels prevailed on Wall Street yesterday as financial markets made their more considered response to the Reagan Administration's plans for U.S. international trade and the dollar, writes Terry Byland in New York.

The market proved unwilling to extend its gains, as buyers backed off. Bond prices rallied, but the slide in short-term interest rates was halted.

Blue chips rallied from a dull start but the broad range of the market was subdued despite some sizeable block trades in the financial sector.

At 3pm the Dow Jones industrial average was down 0.23 at 1,316.08.

Credit markets continued to focus on the prospects of success for plans to reduce the dollar's foreign exchange value, paying little heed to the latest data on the pace of the U.S. economy.

Bond prices edged higher, despite news of a sharp jump in August durable goods orders, implying a strengthening economy. The 0.2 per cent gain in consumer prices was in line with expectations.

Still due this week are the Treasury's latest budget statement, and the U.S. trade balance for August, both with significance for the federal deficit which remains a bearish factor for Wall Street.

Market analysts took comfort from

the absence of any significant selling pressure. But Monday's 18-point rise appeared slightly unconvincing, in view of the moderate turnover total and the weakness in bonds.

The slide in short-term rates has again opened up prospects for a cut in the federal discount rate from 7½ per cent. Bank stocks, which would benefit from such a move, were featured by substantial block trades, notably 2.4m shares in Manufacturers Hanover, up ½¢ at \$35, and \$90,000 in Bankers Trust, down ½¢ at \$62½.

IBM shed ½¢ to \$127½ and minor profit-taking in other technology stocks brought falls of ½¢ to \$110½ in Digital Equipment, ¼¢ to \$87 in Burroughs and ¾¢ to \$64½ in Honeywell. However, selling was light.

Motor stocks moved narrowly as the latest industry sales figures began to flow. Ford, reporting higher sales, edged up ¼¢ to \$44½, but Chrysler, down ¼¢ at \$36½, and General Motors, down ½¢ at \$67½, lacked supporters.

Profit-taking in chemicals took \$1 off Monsanto at \$46. But pharmaceuticals again looked for benefits from a lower dollar, Merck adding ½¢ to \$110½ and Pfizer ¼¢ to \$47½.

Trading statements and takeover speculation brought activity in food stocks. General Foods, despite the board's construction of takeover defences, jumped ½¢ to \$90 as hopes of a bid from Phillip Morris were re-ignited.

Pillsbury, regarded last week as a Phillip Morris bid target, fell ½¢ to \$57½ despite higher profits in the first quarter. Beatrice Foods held unchanged at \$33½ after disclosing lower sales for the second quarter.

General Mills, reporting lower earnings, gained ½¢ to \$58½.

Litton Industries slumped by \$3 to \$72½ following a disappointing earnings forecast from the board. McDonnell Douglas fell ½¢ at 71½ as a federal jury inquired into pricing policies on the F-15 fighter, a major product of the company.

TRW launched its "Dutch auction" buyback of 8m shares, with the stock down \$1 at 81½ as stockholders were invited to tender shares for between \$80 and \$88 a share.

Other scattered features included CBS, which fell ½¢ to \$112 as the board considered selling its stake in Tri-Star Pictures and other assets to buttress takeover defences.

Bonds staged a modest rally in thin trading, as traders' nervousness about inflation were calmed by the slow growth in consumer prices in August.

Short-term rates remained steady but were little affected by the Federal Reserve's announcement of \$3bn in customer repurchases.

LONDON

Renewed pressures take toll

LEADING equities came under renewed selling pressure in London yesterday, leaving the FT index down 12.6 at 982.7.

The market was unsettled by the appearance of a sizeable quantity of stock, particularly in the beleaguered electrical sector, which coincided with a downgrading of projected profits for Thorn EMI. It fell 18p to 357p.

Imperial Group also fell - by 6p to 186p - as dealers expressed disappointment over the sale of its Howard Johnson subsidiary in the U.S.

The gilt-edged market was quieter after Monday's excitement following the Chancellor of the Exchequer's non-committal stance on interest rates.

Chief price changes, Page 33; Details, Page 32; Share information service, Page 30-31

AUSTRALIA

STRONG gains on Wall Street overnight and in gold bullion prices helped Sydney to close firm despite a late wave of selling.

The All Ordinaries index touched a record 965.4 during the day but closed back at 960.8, a net gain of 1.2.

BHP ended four days of solid gains, fuelled by bid speculation, to close 8 cents easier at \$7.48. CSR lost 3 cents to \$5.15, and North Broken Hill eased 5 cents to \$5.25.

Gold was not included in the afternoon selling and Central Norseman and Kidston both firmed 30 cents to \$58.50 and \$55.50 respectively.

Banks closed mixed with National Australia down 8 cents to \$54.75 and Westpac steady at \$54.78.

HONG KONG

CONFIDENCE returned to Hong Kong amid hopes that local interest rates would not rise further.

The Hang Seng index ended the day 17.79 higher at 1,553.24 and turnover rose to HK\$193m from HK\$167m.

Among leaders Cheung Kong rose 20 cents to HK\$17.80. Hong Kong Land was up 20 cents to HK\$6.20 and Hutchison Whampoa put on 40 cents to HK\$25.90.

In the property sector Sun Hung Kai Properties rose 20 cents to HK\$12.60 and New World Development was up 10 cents to HK\$7.50.

SINGAPORE

SPECULATIVE buying and profit-taking ended a string of steady advances in a mixed Singapore.

The Straits Times industrial index fell 3.17 to 782.50 and price changes were largely moderate.

Rajahm Cycles was the most active for the second day running with a turnover of 1.9m. It closed 32 cents up at \$83.36, while General Corp rose 11 cents to \$82.15 and Norelchem finished 2 cents down at \$81.95.

SOUTH AFRICA

THE FIRMER bullion price injected further strength into Johannesburg gold shares while the failure of the rand to respond to a broad decline in the dollar buoyed gold issues by providing a further impetus to the bullion price in local currency terms.

Randfontein Estates sprinted R7 ahead to R230 as Vaal Reef picked up R4 to R201 and Buffels firmed R2 to R78. Scattered European buying interest was evident although most of the support was from local operators.

Elsewhere, Gencor added 25 cents to R29 and leading diamond group De Beers advanced 20 cents to R12.40. Chemical group AECI shed 20 cents to R7.50.

CANADA

THE EFFECT of the plunging U.S. dollar wore off in Toronto as shares retreated in fairly active trading.

Gold, which had led Monday's advance fell back with Echo Bay ½¢ down at \$316½, Campbell Red Lake ½¢ to \$331½ and Lac Minerals easing ½¢ to \$334½.

Among actives were Hiram Walker which put on ½¢ to \$31½ and Gulf Canada which lost ½¢ to \$31½.

In Montreal banks and utilities both edged up while industrials were lower.

TOKYO

Rising yen fuels fresh buying spree

GROWING hopes of lower interest rates after the yen's sharp rise against the U.S. dollar in domestic and international currency markets boosted prices in Tokyo yesterday, writes Shigeo Nishiwaki of Jiji Press.

Investors scurried to buy large-capital shares such as utilities, shipbuilders and steels, as well as oils and domestic demand-oriented stocks. In the afternoon, however, the market levelled off as the yen fell back and profit-taking set in.

The Nikkei-Dow market average gained 22.59 to 12,755.00 - its fourth successive rise - with 470m shares traded compared with 406m last Friday, the last full session. Gains outnumbered losses by 402 to 395, with 131 issues unchanged.

Meanwhile, the new U.S. trade policy caused investors to expect stronger measures by the Japanese Government to stimulate domestic demand.

With the approach of a new business year in October, securities stepped up equity trading to expand their market shares.

Utilities remained in the spotlight throughout the day. A bout of buying by institutional investors and foreigners sent Tokyo Electric Power up Y160 to a new high of Y2,580.

Kansai Electric Power and Chubu Electric Power rose in sympathy. Gas stocks also gained ground, with Tokyo Gas firming Y28 to Y274.

Oils and trading houses advanced across the board in the morning on hopes of lower interest rates, but eased later in profit-taking. Nippon Oil added Y51 to Y780.

Mitsubishi Heavy Industries topped the most active list with 38.3m shares traded and firmed Y3 to Y447. Other large-capital issues also climbed, with Nippon Steel putting on Y8 to Y177 and Ishikawajima-Harima Heavy Industries Y6 to Y213.

Large construction shares drew strength from expectations of stronger measures to boost domestic demand. Kajima Corp rose Y22 to Y544, Taisei Corp, Y16 to Y396, and Shimizu Construction Y10 to Y421.

Among utilities equipment-related issues, Takosaka Electric Manufacturing

firmed Y27 to Y495 and Osaka Transformer Y18 to Y547.

Bonds soared on hopes of lower interest rates in the U.S. Yields on long-term government bonds with some eight years or more remaining to maturity all dropped below 5 per cent.

City banks and other dealers stepped up buying in anticipation of higher bond prices, sending the yield on the benchmark 0.6 per cent government bond due in December 1994 plunging to 5.785 per cent from last Saturday's 5.915 per cent.

EUROPE

Full impact of dollar rate is felt

THE FULL IMPACT of a lower dollar exchange rate was felt on the European bourses yesterday as many centres encountered a spill-over of sentiment from Monday's sharp falls.

Brussels suffered another bruising session with the Belgian Stock Exchange index down 2.48 at 2,487.86 in response to the dollar and persistent technical pressures spawned by last Friday's record high.

Chemical group UCB was particularly weak again with a BFr 130 drop to BFr 5,430 while Tessenderlo eased BFr 85 to BFr 3,825. Wiremaker Bekaert, which exports a large portion of its steel cord for radial tyres to the U.S. declined a further BFr 190 to BFr 6,700 while market leader Petrofina dipped BFr 80 to BFr 6,080 in thin trading.

Wagons Lits, the travel and tourism group which made good progress in Monday's shakeout, finally succumbed to the bears and fell back BFr 45 to BFr 3,855.

Financial holding company Group Bruxelles Lambert lost ground after Friday's plans to join a Rupert Murdoch satellite television project in Europe. GBL fell BFr 5 to BFr 2,110 in moderate trading.

Other features of the session included Kredietbank which added another BFr 50 to BFr 9,600, its second consecutive record in two days of adverse trading, while specialist building group Cimenteries CBR also moved against the trend with a BFr 35 rise to BFr 2,520, partially recouping Monday's setback.

The lower dollar continued to dominate Frankfurt which finished widely

mixed but with domestic shares encountering more support than export-sensitive issues.

The Commerzbank index, calculated at mid-day, fell 15.2 to 1,523.7, partly reflecting losses suffered in the second half of the previous session.

Department stores, currently trading at record levels on the prospect of higher consumer spending fuelled by tax rebates due in the new year, made further progress, largely on the strength of UK buying.

New highs were achieved by the leading retailers with Karstadt surging DM 14 to DM 320, while Karstadt firmed DM 13 to DM 281 and Herten, which is majority-owned by BAT Industries of the UK, jumped DM 13 to DM 211.

Banks made modest progress with Deutsche Bank DM 2 higher on some foreign buying at DM 605 and Commerzbank DM 2 stronger at DM 222.

Thyssen extended the gains of the previous day with a further DM 2 rally to DM 150.50 and electrical leader Siemens reversed early weakness to finish DM 1 higher at DM 600.

Cars eased, with Porsche suffering only a mild DM 2 decline to DM 1,347 while BMW dropped DM 5 to DM 474.

Hopes of higher gold prices boosted chemical and precious metals group Degussa DM 11.50 to DM 379.50 while mainstream chemical Hoechst added 50 pf to DM 222.50.

Bond prices moved slightly higher in a nervous session with traders reluctant to open new positions. The Bundesbank which sold only DM 34.1m of paper after Monday's DM 93.4m sales, seemed intent on keeping price rises in single figures. Gains of 5 basis points were duly managed.

Amsterdam was hesitant in nervous trading which left prices mixed. Royal Dutch, however, managed to score a modest, but significant rise of 50 pf to F1 189 considering the time of the session while Oec van der Grinten picked up F1 1.50 to F1 348.50.

ABN was particularly vulnerable in banks with a F1 3 fall to F1 494.50 ex-rights. Bonds were largely unchanged.

Madrid and Milan lost ground although Zurich finished mixed. Stockholm was steady despite heavy turnover.

Oslo, in stark contrast to the other bourses, hit another record high as the Stock Exchange index firmed 0.18 to 368.23. Storebrand surged to a 1985 peak of Nkr 245 with a rise of Nkr 4.50 although Borregaard eased from its Monday record with a Nkr 1 drop to Nkr 445. Banks advanced with Bergen Nkr 1.50 higher at Nkr 151.50 and Christiania Nkr 1 stronger at Nkr 150.

The Third Professional Personal Computer Conference

One of the most exciting areas of modern electronics, yet also one in turmoil and undergoing dramatic change, is the personal computer industry. The Financial Times 1985 Professional Personal Computer conference will review developments and prospects for the industry and the professional computer market.

Speakers at this high-level meeting to be held in London on the 30 and 31 October 1985 include:

Dr Robb W Wilmot
International Computers Ltd

Mr A E Santelli
IBM United Kingdom
International Products Ltd

Mr Benjamin M Rosen
Compaq Computer
Corporation

Mr Vittorio Levi
Ing C Olivetti & C SpA

Mr Sam Wiegand
Grid Systems Corporation

Mr R K Foster
Apricot Computers p.l.c.

Ms Randy J Goldfield
The Omni Group Ltd

Mr Otto Benz
British Railways Board

Mr Vinton Freedley
Computerland Corporation

Mr David Broad
British Microcomputer
Manufacturers Group
